#### **Notice**

While reasonable efforts were made to ensure that the information in this document was complete and accurate at the time of printing, Avaya Inc. can assume no liability for any errors. Changes and corrections to the information in this document may be incorporated in future releases.

**For full legal page information, please see the complete document, Avaya Legal Page for Software Documentation, Document number 03-600758.**

**To locate this document on the website, simply go to <http://www.avaya.com/support> and search for the document number in the search box.**

#### **Documentation disclaimer**

Avaya Inc. is not responsible for any modifications, additions, or deletions to the original published version of this documentation unless such modifications, additions, or deletions were performed by Avaya. Customer and/or End User agree to indemnify and hold harmless Avaya, Avaya's agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation to the extent made by the Customer or End User.

#### **Link disclaimer**

Avaya Inc. is not responsible for the contents or reliability of any linked web sites referenced elsewhere within this documentation, and Avaya does not necessarily endorse the products, services, or information described or offered within them. We cannot guarantee that these links will work all of the time and we have no control over the availability of the linked pages.

#### **Warranty**

Avaya Inc. provides a limited warranty on this product. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya's standard warranty language, as well as information regarding support for this product, while under warranty, is available through the following web site:

<http://www.avaya.com/support>

#### **Copyright**

Except where expressly stated otherwise, the Product is protected by copyright and other laws respecting proprietary rights. Unauthorized reproduction, transfer, and or use can be a criminal, as well as a civil, offense under the applicable law.

#### **Avaya support**

Avaya provides a telephone number for you to use to report problems or to ask questions about your product. The support telephone number is 1-800-242-2121 in the United States. For additional support telephone numbers, see the Avaya web site:

# About this book

This guide contains information that you need to consider before implementing the Avaya G430 Media Gateway. Use this guide to learn what the G430 can do and to plan how you will deploy a G430 in your environment.

---

## Audience

The information in this book is intended for use by Avaya technicians, provisioning specialists, Business Partners, and customers.

---

## Downloading this book and updates from the web

You can download the latest version of *Overview for the Avaya G430 Media Gateway* from the Avaya web site. You must have access to the Internet, and a copy of Acrobat Reader must be installed on your personal computer.

Avaya makes every effort to ensure that the information in this book is complete and accurate. However, information can change after we publish this book. Therefore, the Avaya web site might also contain new product information and updates to the information in this book. You can also download these updates from the Avaya web site.

---

## Downloading this book

1. Access the Avaya web site at <http://www.avaya.com/support>.
2. Click **FIND DOCUMENTATION** and **TECHNICAL INFORMATION** by **PRODUCT NAME**.
3. Type this book's document number (03-603235) in the **Search** box.
4. Click **GO**.  
The search results appear.
5. Locate the latest version of the book.
6. Click the book title. Your browser downloads the book.

---

Ensure that you mention the name and number of this book, *Overview for the Avaya G430 Media Gateway*, 03-603235.

## **About this book**

# Chapter 1: Introduction

The Avaya G430 Media Gateway is a multipurpose media gateway targeting small and medium branches of 1 to 150 users. The G430 supports two expansion modules to support varying branch office sizes. The G430 works in conjunction with Avaya Aura™ Communication Manager IP telephony software running on Avaya S8XXX Servers to help deliver intelligent communications to enterprises of all sizes.

The G430 combines telephone exchange and data networking, by providing PSTN toll bypass, and routing data and VoIP traffic over the WAN. The G430 features a VoIP engine and Ethernet LAN connectivity. The G430 provides full support for Avaya IP and digital telephones, as well as analog devices such as modems, fax machines, and telephones.

Telephone services on a G430 are controlled by an Avaya S8XXX Server operating either as an External Call Controller (ECC) or as an Internal Call Controller (ICC). The G430 supports the Avaya S8300 Server as an ICC, or as an ECC when the S8300 is installed in another media gateway. The G430 also supports the Avaya S87XX, S85XX, and S8400 Servers as ECCs.

An ICC can be used in addition to an ECC with the ICC installed as a Local Survivable Processor (LSP) designed to take over call control in the event that the ECC fails or the WAN link between the branch office and main location breaks. The LSP provides full featured telephone service survivability for the branch office. The G430 itself also features Standard Local Survivability (SLS), which provides basic telephone services in the event that the connection with the primary ECC is lost.

The G430 is a scalable device with a basic configuration consisting of one power supply unit (PSU), 256 MB RAM, and a single on-board DSP supporting 20 VoIP channels. This configuration can be enhanced by adding a DSP board supporting either 10, 20, or 80 VoIP channels. You can also replace the 256 MB RAM with 512 MB RAM and use an external compact flash to increase the number of announcement files from 256 to 1024 and increase announcement time from 45 minutes to 4 hours.

The G430 is a modular device, adaptable to support different combinations of endpoint devices. While fixed front panel ports support the connection of external LAN switches, Ethernet WAN lines, and external routers, three slots are provided for plugging in optional media modules. Two EM200 expansion modules can be connected to the G430, providing two media module slots each, bringing the total number of available media module slots to seven. Pluggable media modules provide interfaces for different types of telephones and trunks. A combination is selected to suit the needs of the branch. A range of telephony modules provides full support for legacy equipment such as analog and digital telephones. IP phones are supported via an external LAN switch.

The G430 features field replaceable RAM memory card and DSP childboard.

## Features

G430 features include:

- Modular gateway features:
  - 3-slot chassis (three slots for media modules)
  - Two EM200 expansion modules, providing two slots each for media modules
  - Hot swappable media modules
  - Support for hot swappable external compact flash
  - VoIP DSPs (up to 100 channels)
  - Memory SoDIMMs
- Voice features:
  - H.248 gateway
  - Voice line interfaces:
    - IP phones
    - Analog phones
    - Avaya DCP phones
    - BRI Phones
    - FXS/Fax
    - VoIP
    - Fax and modem over IP
  - Voice trunk interfaces:
    - FXO
    - BRI
    - T1/E1
  - Supported CODECs: G.711A/μLaw, G.729a, G.726
  - Survivability features for continuous voice services:
    - Local Survivable Processor (LSP) (with S8300)
    - Standard Local Survivability (SLS)
    - Emergency Transfer Relay (ETR)
    - Modem Dial Backup
    - Dynamic Call Admission Control (CAC) for Fast Ethernet and GRE tunnel interfaces

- Inter-Gateway Alternate Routing (IGAR)
- DHCP and TFTP server to support IP phones images and configuration
- Announcements and Music on Hold (MoH) support
- Contact Closure support
- Routing and WAN features:
  - One WAN 10/100 Ethernet port with traffic shaping capabilities
  - PPPoE and PPP
  - Routing Protocols: Static, OSPF, RIP
  - VRRP
  - Equal Cost Multi Path routing (ECMP)
  - IPsec VPN
  - cRTP
  - WAN Quality of Service (QoS)
  - Policy-based routing
  - DHCP relay
  - GRE tunneling
  - Dynamic IP addressing (DHCP client/PPPoE)
  - Object tracking
  - Backup Interface
- LAN features:
  - Two LAN 10/100/1000 RJ-45 Ethernet ports (w/o POE)
  - Auto-negotiation
  - 2K MAC table with aging
  - 8 VLANs
  - Multi-VLAN binding, 802.1Q support
  - Ingress VLAN Security
  - Broadcast/Multicast storm control
  - Automatic MAC address aging
  - Rapid Spanning Tree
  - Port mirroring
  - RMON statistics
  - Port redundancy
  - LLDP

## Introduction

- Security hardened gateway features:
  - Media and signaling encryption
  - Secured management
  - Digitally signed gateway firmware
  - Managed security service support
  - Access list support
- Management features:
  - Avaya G430 Device Manager
  - Embedded Web Manager
  - RADIUS Authentication support
  - SNMPv1 traps and SNMPv3 notifications
  - SNMPv1 and SNMPv3 servers support
  - Telnet and SSHv2 support
  - SCP, TFTP, and FTP clients
  - Syslog client
  - Modem access for remote administration
  - Converged Network Analyzer (CNA) test plug
  - Packet Sniffing
  - RTP-MIB
  - Backup and Restore on USB Flash drive

## G430 physical description

Figure 1: The Avaya G430 Media Gateway Chassis

**Figure notes:**

- |                               |  |
|-------------------------------|--|
| 1. System LEDs                | 8. 10/100M ETH LAN ports                       |
| 2. RST button                 | 9. Compact Flash slot                          |
| 3. ASB button                 | 10. V1 — slot for media module or S8300 Server |
| 4. USB ports                  | 11. V2 — slot for media module                 |
| 5. CCA (Contact Closure) port | 12. V3 — slot for media module                 |
| 6. 10/100M Services port      |  |
| 7. 10/100M ETH WAN port       |  |

For information about the different media modules that can be housed in the G430 media module slots, see [Chapter 2: Optional components](#).

**Table 1: Fixed ports and buttons on the G430 front panel**

Port/Button	Description
CCA	RJ-45 port for ACS (308) contact closure adjunct box.
ETH WAN	One 10/100 Base TX Ethernet WAN port. RJ-45 connector.
ETH LAN	Two 10/100 Base TX Ethernet LAN ports. RJ-45 connectors.
SERVICES	Ethernet 10/100 port for services and maintenance access. RJ-45 connector.

*1 of 2*

Table 1: Fixed ports and buttons on the G430 front panel (continued)

Port/Button	Description
USB	Two USB 2.0 ports with USB connectors. Supports the connection of: <ul style="list-style-type: none"> <li>• USB flash drive. No more than one USB flash drive can be connected.</li> <li>• USB modem: Multitech MultiModemUSB MT5634ZBA-USB-V92, or USRobotics USB modem model 5637. No more than one USB modem can be connected.</li> </ul>
RST	Reset button. Resets chassis configuration.
ASB	Alternate Software Bank button. Reboots the G430 with the software image in the alternate bank.

## EM200 physical description

Figure 2: The EM200 Chassis

### Figure notes:

1. System LEDs
2. V5/V7 — slot for media module
3. V6/V8 — slot for media module

For information about the different media modules that can be housed in the EM200 media module slots, see [Chapter 2: Optional components](#).

# Chapter 2: Optional components

The Avaya G430 Media Gateway is a versatile device with powerful capabilities which can be expanded to include up to two EM200 expansion modules. To implement the various services that are supported, a variety of swappable internal components called media modules are available.

---

## Supported media modules in the G430 and EM200

**Table 2: Supported media modules**

Media module	Description	Comment
S8300 C/D	CM server	In slot V1 only
<b>Telephony media modules</b>		
MM711	8 universal analog ports	
MM714	4 analog telephone ports and 4 analog trunk ports	
MM714B	4 analog telephone ports, 4 analog trunk ports, and an emergency transfer relay	
MM716	24 analog ports	
MM712	8 DCP telephone ports	
MM717	24 DCP telephone ports	
MM710	1 T1/E1 ISDN PRI trunk port	
MM720	8 ISDN BRI trunk or endpoint (telephone or data) ports	
MM722	2 ISDN BRI trunk ports	

 **CAUTION:**

The MM340 and MM342 are not supported by the Avaya G430 Media Gateway. Do not insert an MM340 or MM342 media module into an Avaya G430 Media Gateway.

---

## S8300 server

The S8300 server is a Pentium-based processor that runs a Linux operating system. The G430 supports the S8300 from version S8300C onwards. The S8300 runs Avaya Aura Communication Manager (CM) to provide call control services to the G430. The G430 is compatible with Avaya CM from version 5.2.

The S8300 server features:

- Avaya Native Configuration Manager. An administration tool that provides terminal emulation capabilities and a variety of connectivity options you can save and reuse.
- A WEB server used for the following:
  - Backups and restores for customer data
  - Easy access to view current alarms
  - The ability to perform server maintenance, shutdown, and status of the S8300 server
  - Security commands that can enable and disable the modem, start and stop the FTP server, and view the software license
  - SNMP access to configure trap destinations and stop and start the master agent
  - S8300 server configuration information and upgrade access
  - The ability to download the Avaya Native Configuration Manager from the S8300 server to a PC on the LAN
- Linux operating system (Redhat v8.x)
- Interface for IA770 INTUITY AUDIX Messaging, a software-only version of INTUITY AUDIX messaging that resides on the hard drive of the S8300 server. For more information, see the description of the S8300 server in the *Hardware Description and Reference for Avaya Aura Communication Manager*, 555-245-207.
- Trivial File Transfer Protocol (TFTP) server
- Security/firewall configuration
- H.248 Media Gateway Signaling Protocol
- Control messages tunneled over H.323 Signaling Protocol
- One 10/100Base-T Ethernet switch port used as a Services port
- Three USB ports for modem connections
- SNMP alarming

- Support for remote call out alarming

**Figure 3: The S8300 server**

## Telephony media modules

The G430 supports the MM711, MM714, MM714B, and MM716 analog media modules, the MM712 and MM717 DCP media modules, the MM710 E1/T1 media module, and the MM720 and MM722 BRI media modules.

### MM711 analog media module

The MM711 provides analog trunk and telephone features and functionality.

#### Configuring MM711 ports

The administrator can configure any of the eight ports of the MM711 as follows:

- Central office trunk, either loop start or ground start
- Analog Direct Inward Dialing (DID) trunks, either wink-start or immediate-start
- 2-wire analog Outgoing CAMA E911 trunks for connectivity to the PSTN
- MF signaling is supported for CAMA ports
- Analog, tip/ring devices, such as single-line telephones with or without LED message waiting indication

#### MM711 also supports

- Three ringer loads (ringer equivalency number) for up to 2,000 feet (610 meters) for all eight ports
- Up to eight simultaneously-ringing ports

#### Note:

The media gateway achieves this number of ports by staggering the ringing and pauses between two sets of up to four ports.

- Type 1 Caller ID
- Ring voltage generation for a variety of international frequencies and cadences

---

**Figure 4: The MM711 media module**

## MM714 analog media module

The MM714 analog media module provides four analog telephone ports and four analog trunk ports.

**Note:**

The four analog trunk ports *cannot* be used for analog DID trunks. Instead, the four analog telephone ports must be used.

### Configuring MM714 ports

The MM714 provides you with the capability to configure any of the four trunk ports as:

- A loop start or a ground start central office trunk with a loop current of 18 to 120 mA
- A two-wire analog Outgoing CAMA E911 trunk, for connectivity to the PSTN. MF signaling is supported for CAMA ports.

### Configuring MM714 line ports

The MM714 provides you with the capability to configure any of the four telephone ports as:

- A wink-start or an immediate-start DID trunk
- Analog tip/ring devices such as single-line telephones with or without LED message waiting indication

### MM714 also supports

- Three ringer loads, which is the ringer equivalency number for up to 2,000 feet (610 meters) for all eight ports
- Up to four simultaneously-ringing ports
- Type 1 caller ID and Type 2 caller ID
- Ring voltage generation for a variety of international frequencies and cadences

---

**Figure 5: The MM714 media module**

## MM714B analog media module

The MM714B analog media module provides all the features provided by the MM714 (see [MM714 analog media module](#)), and in addition provides an emergency transfer relay.

### MM714B supports ETR

In the event of system failure, the MM714B provides emergency transfer relay (ETR) services by connecting trunk port 5 and line port 4.

---

**Figure 6: The MM714B media module**

## MM716 analog media module

The MM716 provides 24 analog ports supporting telephones, modem, and fax. These ports can also be configured as DID trunks with either wink-start or immediate-start. The 24 ports are provided via a 25 pair RJ21X amphenol connector, which can be connected by an amphenol cable to a breakout box or punch-down block.

### Configuring MM716 ports

The MM716 provides you with the capability to configure any of the 24 ports as:

- Analog tip/ring devices such as single-line telephones with or without LED message waiting indication
- A wink-start or an immediate-start DID trunk

### MM716 also supports

- Three ringer loads, which is the ringer equivalency number for up to 2,000 feet (610 meters) for all 24 ports
- Up to 24 simultaneously-ringing ports
- Type 1 caller ID
- Ring voltage generation for a variety of international frequencies and cadences

The MM716 is compatible with Avaya Aura™ Communication Manager release 3.1 and higher, and branch gateway firmware version 29.x.x and higher.

---

**Figure 7: The MM716 media module**

---

## MM712 DCP media module

The MM712 DCP media module provides eight DCP telephone ports. The ports support two-wire Digital Communications Protocol (DCP) telephones. See [Appendix B: Supported Avaya telephones](#) for a list of compatible DCP telephones.

---

**Figure 8: The MM712 media module**

---

## MM717 DCP media module

The MM717 DCP media module provides 24 DCP ports of two-wire DCP functionality exposed as a single 25-pair amphenol connector. The DCP ports are exposed by connecting the module via a standard amphenol cable to a punch-down block with RJ-11 jacks. The MM717 allows you to use one of the smaller media module slots for a large number of DCP telephones.

---

**Figure 9: The MM717 media module**

---

## MM710 E1/T1 media module

The MM710 E1/T1 media module terminates an E1 or T1 trunk. The MM710 has a built-in Channel Service Unit (CSU) so an external CSU is not necessary. The CSU is only used for the T1 circuit.

The MM710 features:

- ISDN PRI capability (23B+D or 30B+D)
- Trunk signaling to support US and International CO or tie trunks

- Echo cancellation in either direction

---

**Figure 10: The MM710 media module**

---

## MM720 BRI media module

The MM720 BRI media module provides eight ports with RJ-45 jacks that can be administered either as BRI trunk connections or BRI endpoint (telephone and data module) connections.

**Note:**

The MM720 BRI media module cannot be administered to support both BRI trunks and BRI endpoints at the same time. However, the MM720 BRI Media Module supports combining both B-channels together to form a 128-kbps channel. CM 3.1 enables combining B-channels, using BONDing, to form a higher bandwidth connection.

Finally, if the MM720 BRI Media Module is administered to support BRI endpoints, it cannot be used as a clock synchronization source.

For BRI trunking, the MM720 BRI media module supports up to eight BRI interfaces to the central office at the ISDN TE reference point. Information is communicated in two ways:

- Over two 64-kbps channels, called B1 and B2, that can be circuit-switched simultaneously
- Over a 16-kbps channel, called the D-channel, that is used for signaling. The MM720 occupies one time slot for all eight D channels.

The circuit-switched connections have an A- or Mu-law option for voice operation. The circuit-switched connections operate as 64-kbps clear channels when in the data mode.

For BRI endpoints, the MM720 BRI media module supports up to 16 BRI stations and data modules that conform to AT&T BRI, World Class BRI, and National ISDN NI1/NI2 BRI standards. The MM720 BRI media module provides -40 volt phantom power to the BRI endpoints.

---

**Figure 11: The MM720 media module**

## Optional components

### MM722 BRI media module

The MM722 BRI media module provides two 4 wire S/T ISDN BRI 2B+D access ports with RJ-45 jacks. Each port interfaces to the central office at the ISDN T reference point. Information is communicated in the same manner as for the MM720. See [MM720 BRI media module](#) on page 21.

---

**Figure 12: The MM722 media module**

---

**Note:**

The MM722 media module does not support BRI stations or combining both B channels together to form a 128-kbps channel.

---

## Media module slot configurations in the G430 and EM200

When choosing a combination of media modules to install in the G430 chassis and EM200 expansion modules, consider the slots in which each module type can be housed, and the limitations and recommendations regarding combinations of media modules.

---

### Permitted slots

The G430 chassis has three media module slots, marked V1, V2, and V3 (see [G430 physical description](#) on page 13). Each of the two optional EM200 expansion modules has two media module slots each (see [EM200 physical description](#) on page 14). The slots of the EM200 connected to the EXPANSION OUT 1 connector on the rear of the G430 are slots V5 and V6, and the slots of the EM200 connected to the EXPANSION OUT 2 connector on the rear of the G430 are slots V7 and V8. The following table lists the permitted slots for each media module.

**Table 3: Permitted slots for media modules**

Media module	Permitted slots
MM710	Any media module slot: V1-V3, V5-V8.
MM711	Any media module slot: V1-V3, V5-V8
MM712	Any media module slot: V1-V3, V5-V8
MM714	Any media module slot: V1-V3, V5-V8
MM714B	Any media module slot: V1-V3, V5-V8
MM716	Any media module slot: V1-V3, V5-V8
MM717	Any media module slot: V1-V3, V5-V8
MM720	Any media module slot: V1-V3, V5-V8
MM722	Any media module slot: V1-V3, V5-V8
S8300 C/D	V1

---

## G430 and EM200 media module capacity

The G430 chassis is designed to accommodate:

- Up to three of the following telephony media modules: MM710, MM711, MM712, MM714, MM714B, MM720, MM722
- Up to two of the following telephony modules: MM716, MM717
- Up to one S8300 server (in slot V1 only)

Each EM200 chassis is designed to accommodate:

- Up to two of the following telephony media modules: MM710, MM711, MM712, MM714, MM714B, MM716, MM717, MM720, MM722

**Note:**

Although you can insert a total of seven MM710 media modules in the extended G430 (a G430 with two EM200 expansion modules), the optimum number is four MM710 media modules, since the G430 can support up to 100 VoIP channels.

# Chapter 3: Summary of services

The G430 offers various services, which are described in [Media gateway services](#) on page 25, [LAN services](#) on page 31, and [WAN services](#) on page 32.

---

## Media gateway services

The Avaya G430 Media Gateway provides a telephone exchange service, supporting the connection of various types of telephones and outside telephone lines. Telephones and lines are connected to the G430 via media modules on the chassis. Different media modules provide access ports for different types of telephones and lines.

Telephony services are controlled by a media gateway controller (MGC) running Avaya Aura™ Communication Manager (CM) call processing software. You can use the Avaya CM to configure many advanced telephone exchange functions. For more information, see the *Administrator's Guide for Avaya Aura Communication Manager*, 555-233-506.

This section describes the services the G430 provides as a media gateway.

---

## Voice over IP (VoIP)

The Avaya G430 Media Gateway features up to two VoIP DSPs that provide voice services over IP data networks. The G430 allows you to use many types of telephones and trunks that do not directly support VoIP. The G430 translates voice and signalling data between VoIP and the system used by the telephones and trunks, as follows: Avaya media modules convert the voice path of traditional circuits such as analog trunk and DCP to a TDM bus inside the G430. The VoIP engine then converts the voice path from the TDM bus to a compressed or uncompressed and packetized VoIP on an Ethernet connection.

The G430 provides VoIP services over the LAN and WAN. The G430 has an on-board VoIP DSP providing 20 VoIP channels, and supports an optional additional DSP board providing 10, 20, or 80 VoIP channels. The maximum number of active channels supported is 100. All channels can be bi-directional FAX, G.711 u/A, G.726A, or G.729A/AB calls.

---

## Physical media — G430

There are various types of telephones and lines supported by the G430 and access ports provided for their connection.

### Telephones

The G430 supports IP telephones, Avaya DCP telephones, analog telephones, and BRI telephones. For information about which Avaya telephones are supported, see [Appendix B: Supported Avaya telephones](#).

Telephones must be connected to the correct type of port for the telephone type. Different types of telephone ports are provided by different media modules. The table below lists which ports you can use to connect each type of telephone. See [Chapter 2: Optional components](#) for more information about each type of port and media module.

**Table 4: Telephones supported and ports provided**

Telephone type	Ports
IP telephones	An external LAN switch must be connected to one of the front panel ETH LAN ports.
<b>Note:</b> The registration and signaling control information is under the direct control of the S8xxx server.	
Avaya DCP digital telephones	DCP ports on the MM712 and MM717 media modules.
Analog telephones	Analog line ports on the MM711, MM714, MM714B, and MM716 analog media modules.

### Voice software

The G430 supports telephone calls between a computer on the network running Avaya Softphone software and analog telephones connected to the G430.

## Outside telephone lines

The table below lists which modules you can use to connect each type of outside line. See [Chapter 2: Optional components](#) for more information about each type of port and media module.

**Table 5: Outside telephone lines supported and ports provided**

Line Type	Ports
ISDN line	ISDN ports on the MM720 and MM722 BRI media modules.
Analog trunks	Analog trunk ports on the MM714 or MM714B analog media module. Universal analog ports on MM711. DID trunk ports with wink-start and immediate-start only on MM716.
T1/E1 voice lines	The T1/E1 port on the MM710 T1/E1 media module.

## Media Gateway Controllers

A Media Gateway Controller (MGC) controls telephone services on a media gateway. An MGC may be internal to the media gateway or external to the media gateway. An Internal Call Controller (ICC) is an internal MGC. An External Call Controller (ECC) is an external MGC that communicates with the G430 over the network.

An Avaya S8XXX server managed with Avaya Aura™ Communication Manager (CM) software acts as an MGC for the Avaya G430 Media Gateway.

## Supported S8XXX servers

The MGCs supported by the Avaya G430 Media Gateway include both ECCs and ICCs. The G430 supports the following MGCs:

**Table 6: MGCs supported by the Avaya G430 Media Gateway**

MGCs	Type	Usage
Avaya S8300 Server	Media module	ICC, ECC or LSP
Avaya S8400 Server	External	ECC
Avaya S8500 Server	External	ECC or LSP
Avaya S8510 Server	External	ECC or LSP
Avaya S8710 Server	External	ECC

**Table 6: MGCs supported by the Avaya G430 Media Gateway (continued)**

MGCs	Type	Usage
Avaya S8720 Server	External	ECC
Avaya S8730 Server	External	ECC

See [Chapter 2: Optional components](#) for information about the S8300 Server module.

## Configuring G430 options

The G430 provides the following configuration options to help you ensure continuous telephone services:

- You can configure the G430 to use up to four MGCs. If the MGC is an S8710, S8720, or S8730, the first server on the list will normally be the primary C-LAN board connected to the S8xxx server. If the MGC is an S8400 or S85XX, the first server on the list will be either the primary C-LAN board connected to the S8xxx server or an Ethernet port on the server that has been enabled for processor Ethernet connections. If the MGC is an S8300, the first server on the list will be the IP address of the S8300. The remaining servers will be alternate C-LAN boards connected to the S8xxx server (S8400, S85XX, or S87XX servers), an S8300 configured as an LSP, or the port enabled as the Ethernet processor port on an S85XX configured as an LSP.
- Using the connection preserving migration feature, you can configure the G430 to preserve the bearer paths of stable calls in the event that the G430 migrates to another MGC (including an LSP), including migration back from an LSP to the primary MGC. A call for which the talk path between parties in the call has been established is considered stable. A call consisting of a user listening to announcements or music is not considered stable and is not preserved. Any change of state in the call prevents the call from being preserved. For example, putting a call on hold during MGC migration will cause the call to be dropped. Special features, such as conference and transfer, are not available on preserved calls. Connection preserving migration preserves all types of bearer connects except BRI. PRI trunk connections are preserved.
- You can configure Standard Local Survivability (SLS) to enable a local G430 to provide a degree of MGC functionality when no link is available to an external MGC. SLS is configured from the individual G430 itself using the CLI. SLS is supported for all analog interfaces, ISDN BRI/PRI trunk interfaces, non-ISDN digital DS1 trunk interfaces (T1 Robbed Bit and E1-CAS), IP phones, IP softphones, and DCP phones.
- You can configure Enhanced Local Survivability (ELS) by installing an S8300 in the G430 as a Local Survivable Processor (LSP). In this configuration, the S8300 is not the primary MGC but takes over to provide continuous telephone service if all external MGCs become unavailable. Calls in progress continue without interruption when the S8300 takes over.
- You can configure the dialer interface to connect to the G430's primary MGC via a USB modem in the event that the connection between the G430 and the MGC is lost.

- You can configure the Avaya CM to support the auto fallback feature, which enables a G430 being serviced by an LSP to return to its primary MGC automatically when the connection is restored between the G430 and the MGC. When the G430 is being served by its LSP, it automatically attempts to register with its MGC at periodic intervals. The MGC can deny registration in cases in which it is overwhelmed with call processing, or in other configurable circumstances. By migrating the G430 to the MGC automatically, a fragmented network can be unified more quickly, without the need for human intervention.

**Note:**

Auto fallback does not include survivability. Therefore, there is a short period during registration with the MGC during which calls are dropped and service is not available. This problem can be minimized using the connection preserving migration feature.

- The G430 features a dynamic trap manager, which enables you to ensure that the G430 sends traps directly to the currently active MGC. If the MGC fails, the dynamic trap manager ensures that traps are sent to the backup MGC.

## MGC management

The MGC is managed by the Avaya Aura™ Communication Manager (CM). The G430 supports Avaya Aura™ Communication Manager (CM) release 5.2.

## Avaya CM features

Avaya CM is an open, scalable, highly reliable, and secure telephony application. Avaya CM provides user and system management functionality, intelligent call routing, application integration and extensibility, and enterprise communications networking. Avaya CM offers over 700 features, in the following categories:

- Telephony features
- Localization
- Collaboration
- Mobility
- Messaging
- Telecommuting
- System management
- Reliability
- Security, privacy, and safety
- Hospitality
- Attendant features
- Networking

## Summary of services

- Intelligent call routing
- Application programming interfaces

## Avaya CM software applications

- Determine where to connect your telephone call based on the number you dial
- Assign numbers to local telephones
- Play dial tones, busy signals, and prerecorded voice announcements
- Allow or prohibit access to outside lines for specific telephones
- Assign telephone numbers and buttons to special features
- Exchange call switching information with older telephone switches that do not support VoIP

For more information about Avaya CM software, see *Administrator's Guide for Avaya Aura Communication Manager*, 555-233-506.

---

## Additional features

The G430 also provides voice-related features.

## Call center capabilities

With large announcement storage including optional compact flash, large voice trunk capacity, and 16 announcement ports for announcement record and playback, the G430 supports call center features.

## Emergency Transfer Relay (ETR)

The Emergency Transfer Relay (ETR) feature provides basic telephone services in the event of a power outage or a failed connection to Communication Manager. ETR services are provided on the MM714B media modules by connecting the module's trunk port 5 to line port 4.

## Contact closure

The contact closure feature is a controllable relay providing dry contacts for various applications. To implement the contact closure feature, connect an Avaya Partner Contact Closure Adjunct box to the CCA port on the G430 chassis. The adjunct box provides two contact closures that can be operated in either a “normally closed” or “normally open” state. The contact closures can control devices such as devices that automatically lock or unlock doors or voice recording units. The CCA port can be configured so that the connected devices can be controlled by an end device, such as a telephone. For example, a user can unlock a door by keying a sequence into a telephone keypad.

## Fax, modem, TTY over IP

The G430 supports fax, modem, and TTY over IP.

---

## LAN services

You can integrate the G430 into an existing LAN.

---

## Physical media

The G430 provides LAN services through the fixed LAN ports on the chassis front panel for the connection of external LAN switches or local data devices. The LAN ports are connected to the internal LAN switch and support HP auto-MDIX, which automatically detects and corrects the polarity of crossed cables. This results in simplified LAN installation and maintenance.

---

## VLANs

In the G430, you can configure VLANs on the fixed LAN ports.

The G430 supports up to eight VLANs. The following VLAN features are supported:

- VLAN port grouping. Port VLANs can be used to group LAN ports into logical groups.
- Ingress VLAN Security. You configure a list of ingress VLANs on each port. Any packets tagged with an unlisted VLAN are dropped when received on the port.
- Class of Service (CoS) tagging. Packets are tagged with VLANs per CoS.
- Inter-VLAN routing. You can configure specific VLANs to permit access to the WAN while others can be configured to deny access to the WAN.

## Rapid Spanning Tree Protocol (RSTP)

The IEEE 802.1D (STP) and IEEE 802.1w (RSTP) Spanning Tree Protocols are supported on the ETH LAN ports.

---

## Port mirroring

The G430 supports network traffic monitoring by port mirroring. You can configure port mirroring on any LAN port. You implement port mirroring by connecting an external traffic probe device to one of the LAN ports. The probe device monitors traffic that is sent and received through other ports by copying the packets and sending them to the monitor port.

---

## Port redundancy

You can configure port redundancy on the G430. Port redundancy enables you to provide both a primary link and a backup link to an important resource.

---

## Link Layer Discovery Protocol (LLDP)

LLDP simplifies network troubleshooting and enhances the ability of network management tools to discover and maintain accurate network topologies in multi-vendor environments. LLDP defines a set of advertisement messages (TLVs), a protocol for transmitting the TLVs, and a method for storing the information contained in the received TLVs. This allows stations attached to a LAN to advertise information about the system and about the station's point of attachment to the LAN to other stations attached to the same LAN. These can be reported to the management station via SNMP MIBs.

LLDP is supported on the front panel ETH LAN ports.

---

## WAN services

The G430 has an internal router and provides direct access to outside WAN lines. You can use the G430 as the endpoint device for a WAN line. You can also use the G430 as the router for a WAN line with an external endpoint device.

---

## Physical media

You can use the fixed ETH WAN Fast Ethernet port as a WAN endpoint by configuring the port's interface for PPPoE encapsulation (ADSL modem) or Ethernet-DHCP/static IP (cable modem).

To use the G430 as a router, connect the external endpoint device to the ETH WAN port on the G430 front panel using a standard network cable.

## WAN line support

The G430 supports the following types of data WAN line:

- PPPoE (ADSL modem)
- Ethernet-DHCP/static IP (cable modem)

---

## WAN features

The G430 supports the following WAN features:

- Traffic shaping. The traffic shaping function estimates the parameters of the incoming traffic and takes action if it measures traffic exceeding agreed parameters. The action could be to drop the packets or mark them as being high drop priority.
- PPPoE
- Backup functionality supported between any type of Layer 2 interface except for the VLAN interface
- Dynamic Call Admission Control (CAC) for Fast Ethernet and GRE tunnel interfaces. Dynamic CAC provides enhanced control over WAN bandwidth. When Dynamic CAC is enabled on an interface, the G430 informs the MGC of the actual bandwidth of the interface and tells the MGC to block calls when the bandwidth is exhausted.
- Quality of Service (QoS). The G430 uses Weighted Fair VoIP Queuing (WFVQ) as the default queuing mode for WAN interfaces. WFVQ combines weighted fair queuing (WFQ) for data streams and priority VoIP queuing to provide the real-time response time that is required for VoIP. The G430 also supports the VoIP Queue and Priority Queue legacy queuing methods.
- Weighted Random Early Detection (WRED). The G430 uses WRED on its ingress and egress queues to improve the performance of the network when overloaded. The purpose of WRED is to indicate to transmitting hosts to reduce their transmission speed when the ingress G430 queues are congested.
- Policy. Each interface on the G430 can have four active policy lists:
  - Ingress Access Control List

## Summary of services

- Ingress QoS List
- Egress Access Control List
- Egress QoS List

Access control lists define which packets should be forwarded or denied access to the network. QoS lists change the DSCP and 802.1p priority of routed packets according to the packet characteristics.

- Policy-based routing. The G430 features policy-based routing, which uses a policy list structure to implement a routing scheme based on traffic source, destination, type, and other characteristics. You can use policy-based routing lists (PBR lists) to determine the routing of packets that match the rules defined in the list. Common applications include separate routing for voice and data traffic, routing traffic originating from different sets of users through different Internet connections (Internet Service Providers), and defining backup routes for defined classes of traffic.
- RTP Header Compression. The G430 saves up to 60% of the bandwidth necessary using RTP compression. It also enhances the efficiency of voice transmission over the network by compressing the headers of Real Time Protocol (RTP) packets, thereby minimizing the overhead and the delays involved in RTP implementation.
- TCP Header Compression. The G430 uses Transmission Control Protocol (TCP) header compression to reduce the amount of bandwidth needed for non-voice data. TCP header compression can be applied either as part of RTP Header Compression via IPCH, or using the Van Jacobson method defined in RFC 1144.
- Inter-Gateway Alternate Routing (IGAR). The G430 uses IGAR as a means to use the PSTN as an alternative to the WAN interface under certain definable conditions. In providing an alternate routing mechanism, IGAR preserves the internal makeup of the call so that the call can be successfully terminated to its original internal destination.

---

## Data and Routing features

The G430 has an internal router. You can configure the following routing features on the router:

- Interfaces
- Routing table
- VPN
- GRE tunneling
- DHCP and BOOTP relay
- DHCP server
- DHCP client
- Broadcast relay
- ARP table

- ICMP errors
- RIP
- OSPF
- Route redistribution
- VRRP
- Fragmentation
- Static routes
- Policy based routing
- Distribution lists
- Dynamic IP addresses
- DNS resolver
- Unnumbered IP interfaces
- SYN cookies
- Keepalive packets
- Object tracking
- Backup interfaces

## Summary of services

# Chapter 4: Management, Security, Alarms and Troubleshooting

---

## Management applications

The Avaya G430 Media Gateway can be managed using any of the following applications:

- Avaya G430 Command Line Interface
- Avaya G430 Manager and Embedded Web Manager
- Avaya Integrated Management

---

## Avaya G430 Command Line Interface (CLI)

You can use the Avaya G430 CLI to configure the G430 and its media modules. The CLI is a textual command prompt interface. It is similar to the CLI of many other network devices.

You can access the CLI with any of the following:

- SSH (Secure Shell), which enables you to establish a secure remote session over the network, Services port, or dial in modem (PPP). SSH is enabled by default.
- Telnet through the network, Services port or dial in modem (PPP). Telnet is disabled by default

For information about each command in the CLI, see the *Avaya G430 CLI Reference*, 03-603234.

For information about how to use the CLI to perform specific configuration tasks, see *Administration for the Avaya G430 Media Gateway*, 03-603228.

---

## Avaya G430 Manager and Embedded Web Manager

Avaya G430 Manager is a web-enabled graphical administration tool for configuring a single G430 device. You can use Avaya G430 Manager to configure the G430 chassis and media modules. You can also use it for status monitoring and troubleshooting. You can open Avaya G430 Manager in one of the following ways:

- From Avaya Integrated Management software
- From a web browser on a computer

For information about Avaya G430 Manager, see the *Avaya Integrated Management Release 5.2 G430 Manager User Guide*.

---

## Avaya Integrated Management

Avaya Integrated Management offers a comprehensive set of web-based network and system management solutions that support Avaya converged voice solutions. You can use Avaya Integrated Management to monitor SNMP traps on the G430. You can also use Avaya Integrated Management to access Avaya G430 Manager.

---

## Management access security features

The G430 features the following management security mechanisms:

- A basic authentication mechanism in which users are assigned passwords and privilege levels
- Support for user authentication provided by an external RADIUS server
- SNMPv3 user authentication
- Secure data transfer via SSH and SCP with user authentication
- ASG authentication for remote service logins. ASG is a challenge-response authentication method that is more secure than password authentication and does not require a static password.

---

## Network security features

The Avaya G430 Media Gateway provides the following network security features:

- Private secure connections can be configured between the G430 and a remote peer, using VPN (Virtual Private Network). VPN at the IP level is deployed using a standards-based set of protocols defined by the IETF called IPSec. IPSec provides privacy, integrity, and authenticity to information transferred across IP networks.

- Protection against DoS (Denial of Service) attacks via:
  - MSS notifications. The G430 identifies predefined or custom-defined traffic patterns as suspected DoS attacks and generates SNMP notifications, referred to as Managed Security Services (MSS) notifications. MSS notifications are intercepted and, if certain conditions are met, may be forwarded to the Avaya Security Operations Center (SOC) as INADS alarms. The SOC is an Avaya service group that handles DoS alerts, responding as necessary to any DoS attack or related security issue.
  - SYN cookies, which protect against a well-known TCP/IP attack in which a malicious attacker targets a vulnerable device and effectively prevents it from establishing new TCP connections.

---

## Alarms and troubleshooting features

The G430 has extensive features for error detection, alarms, and troubleshooting. Detailed diagnostic information and troubleshooting are provided by software-based solutions accessible by laptops in the field or remotely from an administrator's computer. *Administration for the Avaya G430 Media Gateway*, 03-603228, provides a comprehensive guide to configuring and using these solutions.

---

## Front panel LEDs

LEDs on the front panel of the G430 and the media modules give a quick overall understanding of the health of the system and subsystems. When alarms or problems occur, LEDs indicate that a technician's attention is needed.

---

## Automatic error detection

During normal operations, software or firmware automatically detects and attempts to fix or circumvent error conditions. Errors are detected in two ways:

- Firmware on a system component during ongoing operations
- A "periodic test" or a "scheduled test" started by software

A technician can run more comprehensive tests on demand.

## SNMP

The G430 reports alarms using SNMP traps. The G430 fully supports SNMP versions SNMPv1 and SNMPv3.

---

## Packet sniffing

The G430 features packet sniffing. All IP and ARP packets that pass through the G430 are recorded. The recorded packets are stored in a file that can be uploaded either to the S8xxx server or to a PC and read by Ethereal for troubleshooting purposes.

---

## VoIP debugging using RTP-MIB

The G430 includes the RTP-MIB feature for debugging QoS-related problems across the VoIP network without any dedicated hardware. During each RTP stream, counters representing various QoS metrics increment whenever configured thresholds for the metrics are exceeded. A limited history of the QoS metric statistics is stored on the G430 for active and terminated RTP streams. Statistics can be displayed via the G430 CLI. In addition, the G430 can be configured to send SNMP traps to the SNMP trap manager on the S8xxx server at the termination of each RTP stream that has QoS problems. The traps are converted to syslog messages and stored for viewing in the messages file on the S8xxx server hard disk.

---

## Converged Network Analyzer (CNA) test plug

CNA test plugs are a component of CNA, a distributed system tool for real-time network monitoring that detects and diagnoses converged network-related issues. CNA is deployed in the G430 to identify any network conditions or impairments that can degrade the user experience for IP telephony and to monitor overall network performance. Test plugs in media gateways provide the ability to measure end-to-end service to the edge of the PSTN, or at points where codec changes are required for interworking between high (LAN) and low (WAN) speed links.

# Chapter 5: Documentation

The following documentation is available to help you implement the G430 in your environment:

- *Installing and Upgrading the Avaya G430 Media Gateway*, 03-603233. Describes how to install and upgrade the G430, prepare the G430 for software configuration, and perform some basic configurations. This guide describes how to insert media modules and connect external devices to the G430 and media module ports.
- *Quick Start for Hardware Installation for the Avaya G430 Media Gateway*, 03-603236. A concise installation guide covering assembly and basic configuration of the G430.
- *Administration for the Avaya G430 Media Gateway*, 03-603228. Describes how to configure and manage the G430 after it is already installed. This guide contains detailed information about all the features of the G430 and how to implement them.
- *Avaya Integrated Management Release 5.2 G430 Manager User Guide*. Describes how to use the Avaya G430 Manager software to manage the G430.
- *Avaya G430 CLI Reference*, 03-603234. Describes the commands in the G430 CLI.
- *Maintenance Alarms for Avaya Aura Communication Manager, Media Gateways and Servers*, 03-300430. Describes MOs and how to resolve alarms.
- *Maintenance Commands for Avaya Aura Communication Manager, Media Gateways and Servers*, 03-300431. Describes all the commands across platforms.
- *Maintenance Procedures for Avaya Aura Communication Manager, Media Gateways and Servers*, 03-300432. Describes maintenance procedures such as network recovery.

# Appendix A: G430 capacities

---

## G430 maximum media gateway capacities

Table 7: G430 media gateway capacities

Description	Capacity	Comments
<b>Media Gateway Limits</b>		
Maximum number of G430 Media Gateways controlled by an S8500 or S8700-series server	250	This number also applies if the same external server controls a combination of Avaya G430, G450, G350, G250, and G700 Media Gateways.
Maximum number of G430 Media Gateways controlled by an S8300 server housed in another G430 (or G450 or G700) Media Gateway.	50	This number also applies if the same external server controls a combination of Avaya G430, G450, G350, G250, and G700 Media Gateways.
Maximum total number of telephones supported by the G430	150	This number can be higher, depending on traffic needs.
Maximum number of IP telephones per G430 Media Gateway	150	This number can be higher, depending on traffic needs.
Maximum number of analog phones per G430 Media Gateway	56 104 for a G430 with one EM200 152 for a G430 with two EM200s	
Maximum number of DCP phones per G430 Media Gateway	56 104 for a G430 with one EM200 152 for a G430 with two EM200s	

---

**1 of 2**

Table 7: G430 media gateway capacities (continued)

Description	Capacity	Comments
Maximum number of BRI endpoints per G430 Media Gateway	48 80 for a G430 with one EM200 112 for a G430 with two EM200s	
Simultaneous two-way conversations with TDM transcoding from IP phone to legacy telephone or trunk.	100	
Simultaneous two-way conversations with TDM transcoding from TDM phones to IP phones	100	
Maximum number of BRI trunks	24 40 for a G430 with one EM200 56 for a G430 with two EM200s	
Maximum number of PSTN trunks	4 T1 3 E1	7 E1/T1 can be supported in tandem mode
<b>Miscellaneous</b>		
Simultaneous fax transmissions	100	Fax transmissions using VoIP resources
Touch-tone recognition (TTR)	32	
Tone Generation	unlimited	
Announcements ports	15 ports for playback 1 for record	
		<b>2 of 2</b>

---

## S8300 maximum capacities

**Table 8: S8300 capacities**

Item	Quantity Supported
Number of Users per S8300	450
Number of Trunks per S8300	450
Total Endpoints (Trunks and Users) per S8300	900
MGs per S8300	50
LSPs per S8300	50
MGs per LSP	50
Announcement Sources per S8300	50
Busy Hour Calls (Maximum, non-call center)	10,000
Locations	50

For a complete list of capacities, see *Avaya Aura Communication Manager System Capacities Table*, 03-300511.

# Appendix B: Supported Avaya telephones

There are various Avaya telephones supported by the G430, including IP, DCP digital, and analog telephones.

## Avaya IP telephones

The G430 supports all Avaya IP telephones, including the Avaya 1602, 1608, and 1616 H.323 IP phones, except for the Avaya 4630 IP Screenphone.

## Avaya DCP digital telephones

The DCP media modules supported by the G430 support the following DCP telephones:

- Avaya 2402 Digital Telephone
- Avaya 2410 Digital Telephone
- Avaya 2420 Digital Telephone
- Avaya 2490 DCP Speakphone
- Avaya 6402 and Avaya 6402D Digital Telephones
- Avaya 6408+ and Avaya 6408D+ Digital Telephones
- Avaya 6416D+ and 6416D+M Digital Telephone
- Avaya 6424D+ and 6424D+M Digital Telephone
- Avaya 8403 Digital Telephone
- Avaya 8410 and 8410D Digital Telephones
- Avaya 8434DX Digital Telephone
- IP softphones that are configured as "Road Warrior" and "Take Over" a DCP station
- Definity Extender – ISDN single endpoint 302 series Attendant Console (302D)
- Avaya 603E Call Master III
- Avaya 606B1 Call Master VI

## Avaya analog telephones

The G430 supports the following Avaya analog telephones:

- Avaya 6210 Analog Telephone
- Avaya 6211 Analog Telephone

## **Supported Avaya telephones**

- Avaya 6218 Analog Telephone
- Avaya 6219 Analog Telephone
- Avaya 6220 Analog Telephone
- Avaya 6221 Analog Telephone
- Avaya 2500 analog Telephone

# Appendix C: G430 technical specifications

The G430 technical specifications include physical dimensions and tolerances of the Avaya G430 Media Gateway, power cord specifications, and media module specifications.

---

## G430 specifications

The following table of technical specifications provides detailed information on the physical dimensions and tolerances of the Avaya G430 Media Gateway:

**Table 9: Avaya G430 Media Gateway specifications**

Description	Value
Height	2.62 in. (66.5 mm)
Width	19 in. (482.6 mm)
Depth	12.8 in. (325 mm)
Weight of empty chassis	under 11 pounds (under 5 Kg)
Weight of chassis with basic configuration	between 13 and 14 pounds (between 6 and 7 Kg)
Ambient working temperature	32° to 104°F (0° to 40°C)
Operation altitude	up to 10,000 ft. (3000 m)
Front Clearance	12 in. (30 cm)
Rear Clearance	18 in. (45 cm)
Humidity	10-90% relative humidity, non-condensing
Power rating	90V-264V AC, 48-62 Hz
BTU	800 BTU/h
Max current	3 A

---

## EM200 specifications

The following table of technical specifications provides detailed information on the physical dimensions and tolerances of the EM200 expansion module:

**Table 10: EM200 specifications**

Description	Value
Height	2.62 in. (66.5 mm)
Width	19 in. (482.6 mm)
Depth	12.8 in. (325 mm)
Weight of empty chassis	under 11 pounds (under 5 Kg)
Weight of chassis with media modules and brackets	13 pounds (6 Kg)
Ambient working temperature	32° to 104°F (0° to 40°C)
Operation altitude	up to 10,000 ft. (3000 m)
Front Clearance	12 in. (30 cm)
Rear Clearance	18 in. (45 cm)
Humidity	10-90% relative humidity, non-condensing
Power rating	90V-264V AC, 48-62 Hz
BTU	430 BTU/h
Max current	3 A

---

## G430 power cord specifications

**For North America:** The cord set must be UL Listed/CSA Certified, 16 AWG, 3-conductor (3rd wire ground), type SJT. One end is to be terminated to an IEC 60320, sheet C13 type connector rated 10A, 250V. The other end is to be terminated to either a NEMA 5-15P attachment plug for nominal 125V applications or a NEMA 6-15P attachment plug for nominal 250V applications.

**For Outside North America:** The cord must be VDE Certified or Harmonized (HAR), rated 250V, 3-conductor (3rd wire ground), 1.0 mm<sup>2</sup> minimum conductor size. The cord is to be terminated at one end to a VDE Certified/CE Marked IEC 60320, sheet C13 type connector rated 10A, 250V and the other end to a 3-conductor grounding type attachment plug rated at a minimum of 10A, 250V and a configuration specific for the region/country in which it will be used. The attachment plug must bear the safety agency certifications mark(s) for the region/country of installation.

---

## G430 media module specifications

**Table 11: Media modules**

Description	Value
Height	0.79 in. (2 cm)
Width	6.69 in. (17 cm)
Depth	12.20 in. (31 cm)
Weight	0.7-0.9 lb. (300-400 grams)
