MS09-021 Vulnerabilities in Microsoft Office Excel Could Allow Remote Code Execution (969462)

Original Release Date: June 10, 2009
Last Revised: June 10, 2009
Number: ASA-2009-216
Risk Level: None
Advisory Version: 1.0
Advisory Status: Final

1. Overview:

Microsoft issued a security bulletin which contained security advisory MS09-021. This security update resolves vulnerabilities that could allow remote code execution if a user opens a specially crafted Excel file that includes a malformed record object. The Common Vulnerabilities and Exposures project (cve.mitre.org) has assigned the names CVE-2009-0549, CVE-2009-0557, CVE-2009-0558, CVE-2009-0559, CVE-2009-0560, CVE-2009-0561 and CVE-2009-1134 to these issues. A description of the vulnerability may be found at:

- http://www.microsoft.com/technet/security/bulletin/ms09-021.mspx

Certain Avaya products utilize Microsoft Operating Systems and may be affected by this vulnerability.

No Avaya system products are vulnerable, as Microsoft Office Excel is not installed by default.

2. Avaya System Products with Microsoft Office Excel installed: None

3. Avaya Software-Only Products:

Avaya software-only products operate on general-purpose operating systems. Occasionally vulnerabilities may be discovered in the underlying operating system or applications that come with the operating system. These vulnerabilities often do not impact the software-only product directly but may threaten the integrity of the underlying platform.

In the case of this advisory Avaya software-only products are not affected by the vulnerability directly but the underlying Microsoft Windows platform may be. For affected Microsoft Operating Systems, Microsoft recommends installing patches.

Detailed instructions for patching the Operating System are given by Microsoft at the following link:
