

Avaya Call Management System Administration

Release 16.3 August 2014

© 2014 Avaya Inc. All Rights Reserved.

Notice

While reasonable efforts were made to ensure that the information in this document was complete and accurate at the time of printing, Avaya Inc. can assume no liability for any errors. Changes and corrections to the information in this document might be incorporated in future releases.

Documentation disclaimer

Avaya Inc. is not responsible for any modifications, additions, or deletions to the original published version of this documentation unless such modifications, additions, or deletions were performed by Avaya. Customer and/or End User agree to indemnify and hold harmless Avaya, Avaya's agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation to the extent made by the Customer or End User.

Link disclaimer

Avaya Inc. is not responsible for the contents or reliability of any linked Web sites referenced elsewhere within this documentation, and Avaya does not necessarily endorse the products, services, or information described or offered within them. We cannot guarantee that these links will work all the time and we have no control over the availability of the linked pages.

Warranty

Avaya Inc. provides a limited warranty on this product. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya's standard warranty language, as well as information regarding support for this product, while under warranty, is available through the Avaya Support Web site:

http://www.avaya.com/support

License

USE OR INSTALLATION OF THE PRODUCT INDICATES THE END USER'S ACCEPTANCE OF THE TERMS SET FORTH HEREIN AND THE GENERAL LICENSE TERMS AVAILABLE ON THE AVAYA WEB SITE

http://www.avaya.com/support/LicenseInfo ("GENERAL LICENSE TERMS"). IF YOU DO NOT WISH TO BE BOUND BY THESE TERMS, YOU MUST RETURN THE PRODUCT(S) TO THE POINT OF PURCHASE WITHIN TEN (10) DAYS OF DELIVERY FOR A REFUND OR CREDIT.

Avaya grants End User a license within the scope of the license types described below. The applicable number of licenses and units of capacity for which the license is granted will be one (1), unless a different number of licenses or units of capacity is specified in the Documentation or other materials available to End User. "Designated Processor" means a single stand-alone computing device. "Server" means a Designated Processor that hosts a software application to be accessed by multiple users. "Software" means the computer programs in object code, originally licensed by Avaya and ultimately utilized by End User, "Hardware" means the standard hardware Products, originally sold by Avaya and ultimately utilized by End User.

License type(s)

Designated System(s) License (DS). End User may install and use each copy of the Software on only one Designated Processor, unless a different number of Designated Processors is indicated in the Documentation or other materials available to End User. Avaya may require the Designated Processor(s) to be identified by type, serial number, feature key, location or other specific designation, or to be provided by End User to Avaya through electronic means established by Avaya specifically for this purpose.

Concurrent User License (CU). End User may install and use the Software on multiple Designated Processors or one or more Servers, so long as only the licensed number of Units are accessing and using the Software at any given time. A "Unit" means the unit on which Avaya, at its sole discretion, bases the pricing of its licenses and can be, without limitation, an agent, port or user, an e-mail or voice mail account in the name of a person or corporate function (e.g., webmaster or helpdesk), or a directory entry in the administrative database utilized by the Product that permits one user to interface with the Software. Units may be linked to a specific, identified Server.

Copyright

Except where expressly stated otherwise, the Product is protected by copyright and other laws respecting proprietary rights. Unauthorized reproduction, transfer, and or use can be a criminal, as well as a civil, offense under the applicable law.

Third-party components

Certain software programs or portions thereof included in the Product may contain software distributed under third party agreements ("Third Party Components"), which may contain terms that expand or limit rights to use certain portions of the Product ("Third Party Terms"). Information identifying Third Party Components and the Third Party Terms that apply to them is available on the Avaya Support Web site:

http://www.avaya.com/support/ThirdPartyLicense

Preventing toll fraud

"Toll fraud" is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company's behalf). Be aware that there can be a risk of toll fraud associated with your system and that, if toll fraud occurs, it can result in substantial additional charges for your telecommunications services

Avaya fraud intervention

If you suspect that you are being victimized by toll fraud and you need technical assistance or support, call Technical Service Center Toll Fraud Intervention Hotline at +1-800-643-2353 for the United States and Canada. For additional support telephone numbers, see the Avaya Support Web site: http://www.avaya.com/support

Trademarks

Avaya and the Avaya logo are either registered trademarks or trademarks of Avaya Inc. in the United States of America and/or other jurisdictions. All other trademarks are the property of their respective owners.

Downloading documents

For the most current versions of documentation, see the Avaya Support Web site:

http://www.avaya.com/support

Avaya support

Avaya provides a telephone number for you to use to report problems or to ask questions about your product. The support telephone number is 1-800-242-2121 in the United States. For additional support telephone numbers, see the Avaya Support Web site:

Preface	19
Purpose	19
Intended users	19
Overview	20
Conventions and terminology	21
Reasons for reissue	21
Documentation Web sites	22
Support	22
Chapter 1: Introduction to CMS Administration	25
What is Avaya CMS?	25
Operating system	25
How Avaya CMS stores ACD data	26
How Avaya CMS logically stores ACD data	26
Real-time databases	26
Historical databases	26
	27
	27
How Avaya CMS physically stores ACD data	29
	29 30
	30 31
	31
How Avaya CMS tracks ACD data	31
How CMS tracks a call	31
Events that start or stop data collection	32
Chapter 2: Configuring Avaya CMS Supervisor	35
Before you begin	35
Controller features.	36
Overview of the Controller	36
Toolbar	36
Status indicators	36
Status messages	37
Menu bar	38
General tab	38
Scripting tab	39
Report Colors tab	40
Creating a new report color scheme	40
Threshold Colors tab	41

	Creating a new threshold color scheme	42
	Name Format tab	43
	Defining entity formats	43
Ch	apter 3: Using the Dictionary to name contact center entities	45
	About the Dictionary.	46
	Before you begin.	46
	Dictionary rules	47
	Searching the Dictionary	48
	ACD Groups	49
	Before you begin.	49
	Permissions	50
	Listing all ACD Groups	50
	Viewing the contents of an ACD Group	51
	ACDs	51
	Permissions	52
	Adding an ACD name	52
	Modifying an ACD name	52
	Deleting an ACD Name	53
	Agent groups	53
	Permissions	54
	Considerations when sizing and reporting on agent groups	54
	Adding an agent group	55
	Listing agents in an agent group	55
	Copying an existing agent group to a new name	56
	Adding agents to an existing agent group	56
	Deleting agents in an existing agent group	57
	Deleting an agent group	57
	Agent string values	5 8
	Permissions	58
	Changing agent string value descriptions	58
	Agent string value field descriptions	59
	Announcements	61
	Permissions	62
	Before you begin.	62
	Adding an announcement name	62
	Viewing an announcement name	63
	Listing all announcement names for an ACD	63
	Modifying an announcement name	64

Deleting an announcement name	64
AUX reason code names	65
Permissions	65
Before you begin.	66
Adding an AUX reason code name	66
Viewing an AUX reason code name	67
Listing all AUX reason code names	67
Modifying an AUX reason code name	<mark>68</mark>
Deleting an AUX reason code	68
Calculations	69
Permissions	69
Before you begin.	70
Viewing a calculation	70
Listing all calculations	71
Adding a calculation	71
Modifying a custom calculation	72
Deleting a custom calculation	73
Call work codes	73
Permissions	74
Before you begin.	74
Adding a name to a call work code	74
Viewing a call work code name	75
Listing all call work code names	75
Modifying a call work code name	76
Deleting a call work code name	76
Constants	77
Permissions	77
Adding a constant	77
Viewing a constant	78
Listing all constants	78
Modifying a constant	79
Deleting a constant	79
Custom database items	80
Permissions	80
Before you begin.	80
Adding a custom database item	81
Viewing a custom database item	81
Listing all custom database items	81
Modifying a custom database item	82
Deleting a custom database item	82

Generic string values synonyms	83
Permissions	83
Viewing generic string values	83
Modifying generic string values	84
Location IDs	84
Permissions	85
Adding a location ID.	85
Viewing a location ID	85
Listing all location IDs	86
Modifying a location ID	86
Deleting a Location ID	87
Login ID names	87
Permissions	88
Before you begin.	88
Adding a name to a login ID	88
Viewing a login ID name	89
Listing all login ID names	89
Modifying a login ID name	90
Deleting a login ID name	90
Logout reason code names	91
Permissions	91
Before you begin.	92
Adding a logout reason code name	92
Viewing a logout reason code name	92
Listing all logout reason code names	93
Modifying a logout reason code name	93
Deleting a logout reason code name	94
Split/skill string values	95
Permissions	95
Before you begin	95
Viewing split/skill string values	95
Modifying split/skill string values	96
Split/skill string value field descriptions	97
Split/Skill names	<mark>9</mark> 8
Permissions	99
Before you begin	99
Adding a split/skill name	100
Viewing a split/skill name	100
Listing all the split/skill names	101
Modifying a split/skill name	101

Deleting a split/skill name	102
Standard database items	102
Permissions	103
Viewing a standard database item	103
Viewing all standard database items alphabetically	104
Trunk group names	104
Permissions	105
Before you begin.	105
Adding a trunk group name	105
Viewing a trunk group name	106
Listing all trunk group names	106
Modifying a trunk group name	106
Deleting a trunk group name	107
Trunk string values	108
Permissions	108
Viewing and modifying trunk string values	108
Trunk string values field descriptions	109
VDN names	110
Permissions	111
Before you begin.	111
Adding a VDN name	112
Viewing a VDN name	112
Listing all VDN names	113
Modifying a VDN name	113
Deleting a VDN name	114
Vector names.	114
Permissions	115
Before you begin	115
Adding a vector name	115
Viewing a vector name	116
Listing all vector names	116
Modifying a vector name	117
Deleting a vector name	117
Dictionary reports	118
Permissions	118
Types of Dictionary reports	118
Dictionary ACDs Report	118
Dictionary Agent Groups Report	118
Dictionary Call Work Codes Report	119
Dictionary Custom Items Report	119

Dictionary Login Identifications Report	119
Dictionary Splits/Skills Report	119
Dictionary Standard CMS Items Report	119
Dictionary Trunk Groups Report	119
Dictionary VDNs Report	119
Dictionary Vectors Report	120
Printing Dictionary reports	120
Running an agent group members report	121
Chapter 4: Using reports	123
Background	123
Interfaces for reports	124
Types of reports	124
What reports summarize	125
Choosing a report	125
Generating a report	126
Printing a report	127
Printing a Historical report	127
Changing the print setup	128
Restarting a report.	128
Chapter 5: Serinting CMS exerctions	129
Chapter 5: Scripting CMS operations	
Before you begin.	129
Tasks scripts can automate	129
Interactive and automatic scripts	130
Creating scripts	130
Accessing scripts	131
Accessing the script options	131
Setting user ID and password	132
Setting users procedure.	132
Creating an interactive report script	133
Creating an automatic report script	133
Creating a script to export report data	134
Creating a script to export report data as HTML	134
Scripting other Supervisor operations	135
Actions not associated with reports	136
Scripting an input window	136
Scripting an action.	137
Organizing scripts	138
Error and warning messages	139

Chapter 6: Administering contact center agents	. 141
Starting or stopping an agent trace	. 141
Viewing current agent trace states	. 143
Listing agents traced	. 144
Changing agent skills	. 145
Changing skills for multiple agents	. 151
Changing extension split assignments	. 153
Moving extensions between splits	. 155
Running a split members report	
Chapter 7: Administering the contact center	
Before you begin.	
ACD Groups	
Before you begin.	
ACD Group capabilities	
ACD Groups feature interfaces	
Permissions	
Adding an ACD Group.	
Listing all ACD Groups	
Adding an ACD to an ACD Group	
Viewing the contents of an ACD Group	
Deleting an ACD from an ACD Group	
Modifying an ACD Group	
Deleting an ACD Group	. 167
Call work codes	. 168
Before you begin	. 168
Permissions	. 169
Adding call work codes	. 169
Viewing call work codes	. 170
Listing all call work codes	. 170
Deleting call work codes	. 171
VDN skill preferences	. 171
Before you begin.	. 172
Permissions	
Changing VDN skill preferences	
Viewing VDN skill preferences	
Listing all VDN skill preferences	
Split/skill call profiles	
Before you begin.	

Permissions		6
Adding split/skill call profiles		6
Viewing an existing split/skill call profile		7
Modifying a split/skill call profile		8
Deleting a split/skill call profile		9
Trunk group assignments		9
Before you begin		0
Permissions		0
Viewing all trunk group assignments		0
Viewing a single trunk group assignment	18	1
Viewing a trunk group assignment by VDN or split	18	1
Trunk group members report		2
Before you begin		3
Permissions		3
Running a trunk group members report		3
VDN-to-vector assignments.	18	4
Before you begin	184	4
Permissions	184	4
Viewing all VDN-to-vector assignments		5
Listing VDNs associated with a vector.		5
Modifying VDN-to-vector assignments.	18	6
VDN call profiles		6
Before you begin		7
Permissions		7
Adding a VDN call profile	18	8
Viewing an existing VDN call profile		9
Modifying a VDN call profile		
Deleting a VDN call profile		0
Vector configuration report		
Before you begin		
Permissions		
Running vector configuration reports		2
Chapter 8: Administering exceptions		3
About exceptions		4
Types of Exceptions.		4
Notification		5
Exception capacities		6
Before you begin.		6
Permissions		7

Exception notification	198
Changing exception notification	198
Agent exceptions	198
Before you begin.	199
Permissions	199
Adding agent exceptions	199
Modifying agent exceptions	201
Deleting agent exceptions	202
Agent exception definitions	203
Split/skill exceptions	206
Before you begin.	206
Permissions	206
Adding split/skill exceptions	207
Modifying split/skill exceptions	207
Deleting split/skill exceptions	209
Split/skill exception definitions	209
Trunk group exceptions	211
Before you begin.	211
Permissions	212
Adding trunk group exceptions	212
Modifying trunk group exceptions	213
Deleting trunk group exceptions	214
Trunk group exception definitions	215
VDN exceptions	215
Before you begin	216
Permissions	216
Adding VDN exceptions	217
Modifying VDN exceptions	218
Deleting VDN exceptions	219
VDN exception definitions	220
Vector exceptions	221
Before you begin	222
Permissions	222
Adding vector exceptions	222
Modifying vector exceptions	223
Deleting vector exceptions	224
Vector exception definitions	226
Real-time exceptions log	227
Before you begin.	227
Running the real-time exceptions log	228

Exception reports	 228
Agent exceptions by location report	 228
Data collection exceptions report	 230
Before you begin	 230
Running a data collection exceptions report	 230
Malicious call trace report	 231
Before you begin	 232
Running a malicious call trace report	 232
Split/skill exceptions report	 233
Trunk group exceptions report	 235
VDN exceptions report	 236
Vector exceptions report	 238
Chapter 9: Administering user permissions	 241
Before you begin.	241
Example of user permissions.	242
	242
	242 243
Adding a CMS user	243 245
Viewing CMS users	245 247
Deleting CMS users	247
-	_
ACD access	249
Before you begin	250
Permissions	250
Adding ACD access	251
Viewing ACD access.	251 252
Listing all ACD access	252 253
Modifying ACD access	253 254
Deleting ACD access	
Feature access.	 255
Contents	255
Before you begin	256
Permissions	256
Viewing Feature Access user permissions	256
Listing all Feature Access user permissions	257
Modifying Feature Access user permissions	258
Main Menu Addition Access	258
Contents	259
Before you begin	259
Permissions	 259

Viewing Main Menu Addition Access.	260
Listing all Main Menu Addition Access	260
Assigning or modifying Main Menu Addition Access.	261
Split/Skill access.	262
Before you begin.	262
Permissions	263
Adding split/skill user permissions	263
Viewing split/skill user permissions	264
Listing all split/skill user permissions	265
Modifying split/skill user permissions	266
Deleting split/skill user permissions	267
Trunk group access	26 8
Before you begin.	269
Permissions	269
Adding trunk group user permissions	269
Viewing trunk group user permissions	271
Listing all trunk group user permissions	271
Modifying trunk group user permissions	272
Deleting trunk group user permissions	274
Vector access	275
Before you begin.	275
Permissions	276
Adding vector user permissions	276
Viewing vector user permissions	277
Listing all vector user permissions	278
Modifying vector user permissions	279
Deleting vector user permissions	280
VDN access	281
Before you begin.	282
Permissions	282
Adding VDN user permissions	282
Viewing VDN user permissions	283
Listing all VDN user permissions	284
Modifying VDN user permissions	285
Deleting VDN user permissions	287
Chapter 10: Configuring CMS system settings	289
Before you begin.	289
CMS state.	289
Before you begin.	209
	230

Permissions	290
Changing the CMS state.	291
Changing the master ACD	291
Data collection	292
Before you begin.	292
Permissions	293

Preface

Avaya Call Management System (CMS) is an application for businesses and organizations that use Avaya communication servers to process large volumes of telephone calls using the Automatic Call Distribution (ACD) feature. Avaya CMS supports solutions for routing and agent selection, multi-site contact centers, remote agents, reporting, interfaces to other systems, workforce management, desktop applications, system recovery, and quality monitoring.

Avaya CMS is part of the Operational Effectiveness solution of the Avaya Customer Interaction Suite.

This section includes the following topics:

- Purpose on page 19
- Intended users on page 19
- Overview on page 20
- <u>Conventions and terminology</u> on page 21
- Reasons for reissue on page 21
- Documentation Web sites on page 22
- Support on page 22

Purpose

The purpose of this document is to provide instructions on administering a contact center through *Avaya CMS Supervisor*.

This information product specifically addresses the functionality of CMS.

Intended users

This document is written for:

- Avaya Call Management System (CMS) administrators who have access to all parts of CMS
- Split/Skill supervisors with limited access to CMS

Overview

This document includes the following topics:

- <u>Chapter 1: Introduction to CMS Administration</u> on page 25
 This chapter provides an overview of this document, password information, and cross-references for *Avava CMS Supervisor* usage
- <u>Chapter 2: Configuring Avaya CMS Supervisor</u> on page 35

This chapter describes the Supervisor configuration options

- <u>Chapter 3: Using the Dictionary to name contact center entities</u> on page 45 This chapter describes how to create synonyms in the Dictionary
- Chapter 4: Using reports on page 123

This chapter describes the basic use of the Reports subsystem

<u>Chapter 5: Scripting CMS operations</u> on page 129

This chapter describes how to script common actions

<u>Chapter 6: Administering contact center agents</u> on page 141

This chapter describes how to change agent splits/skills, create agent templates, move extensions between splits, and use agent trace

<u>Chapter 7: Administering the contact center</u> on page 159

This chapter describes how to add or delete call work codes and split/skill call profiles, change VDN skill preferences, view trunk group assignments, change VDN call profiles, and other contact center activities

Chapter 8: Administering exceptions on page 193

This chapter describes how to define exceptions and run exception reports for agents, split/skills, trunk groups, VDNs, and vectors

<u>Chapter 9: Administering user permissions</u> on page 241

This chapter describes how to create users and define, change, or modify associated *CMS* permissions

<u>Chapter 10: Configuring CMS system settings</u> on page 289

This chapter describes how to change the state of *CMS*, allocate storage space, specify storage intervals, and other system setup activities

<u>Chapter 11: Maintaining CMS</u> on page 327

This chapter describes backups, restores, backup strategies, maintenance reports, backup volumes, and labeling

<u>Chapter 12: Using Solaris</u> on page 401

This chapter describes the Sun Microsystems, Inc. Solaris operating system and how to use it with *CMS*

Chapter 13: Using timetables and shortcuts on page 407

This chapter describes how to use timetables and shortcuts to streamline activities

Conventions and terminology

If you see any of the following safety labels in this document, take careful note of the information presented.

🛆 CAUTION:

Caution statements call attention to situations that can result in harm to software, loss of data, or an interruption in service.

🛆 WARNING:

Warning statements call attention to situations that can result in harm to hardware or equipment.

DANGER:

Danger statements call attention to situations that can result in harm to personnel.

A SECURITY ALERT:

Security alert statements call attention to situations that can increase the potential for unauthorized use of a telecommunications system.

Note:

In some instances, your communication server and its associated software may be referred to as "switch". Unless otherwise noted, the term, *Communication Manager*, includes earlier Avaya communication servers, such as MultiVantage and DEFINITY®.

Reasons for reissue

This document includes the following update:

• No new updates to this document specific to R16.3.

July 2013

• Made changes to section How Avaya CMS physically stores ACD data.

August 2014

• Added **Caution** note to inform about the prerequisites for using ssh connections.

Oracle Corporation now owns Sun Microsystems. Instead of rebranding references to Sun Microsystems with the Oracle name, all occurrences of Sun and Sun Microsystems will remain as is in this document.

Documentation Web sites

All CMS documentation can be found at <u>http://www.avaya.com/support</u>. New issues of CMS documentation will be placed on this Web site when available.

Use the following Web sites to view related support documentation:

Information about Avaya products and service

 Sun hardware documentation <u>http://docs.sun.com</u>

Support

Contacting Avaya technical support

Avaya provides support telephone numbers for you to report problems or ask questions about your product.

For United States support:

1-800-242-2121

For international support:

See the Support Directory listings on the Avaya Web site.

Escalating a technical support issue

Avaya Global Services Escalation Management provides the means to escalate urgent service issues.

Support

Preface

Chapter 1: Introduction to CMS Administration

This section provides introductory information on *Avaya CMS Supervisor* and complementary products. Basic information regarding the interfaces and usage of *Supervisor* can be found in the Avaya CMS Supervisor Installation and Getting Started document.

This section contains the following topics:

- What is Avaya CMS? on page 25
- How Avaya CMS stores ACD data on page 26
- ACD Administration on page 31

What is Avaya CMS?

Avaya CMS is a software product for businesses and organizations that have an Avaya Communication Manager system and receive a large volume of telephone calls that are processed through the Automatic Call Distribution (ACD) feature. *Avaya CMS* collects call-traffic data, formats management reports, and provides an administrative interface to the ACD feature on the Communication Manager system.

A *CMS* administrator accesses the *CMS* database, generates reports, administers ACD parameters, and monitors call activities to determine the most efficient service for the calling customers.

Operating system

Avaya CMS resides on the Sun Microsystems, Inc. Solaris operating system and uses several Solaris system utilities to communicate with terminals and printers, to log errors, and to execute processes. *CMS* utilizes the Informix Software, Inc. INFORMIX database management system, which provides an interface to the *CMS* historical database.

How Avaya CMS stores ACD data

There are two ways to describe how Avaya Call Management System (CMS) stores ACD data:

- Logically How the CMS system organizes data for processing
- Physically How the CMS system mechanically stores the data on the disk drive

This section includes the following topics:

- How Avaya CMS logically stores ACD data on page 26
- How Avaya CMS physically stores ACD data on page 29

How Avaya CMS logically stores ACD data

The logical storage of the ACD data has more impact on the CMS user than does the physical storage. The logical data storage controls how a CMS user is able to access and manipulate ACD data. CMS stores all of the ACD data received from the communication server in the real-time and historical databases.

Real-time databases

Real-time databases include tables for the current intrahour interval data and the previous intrahour interval data. The storage interval can be 15, 30, or 60 minutes.

Historical databases

Historical databases include tables for the intrahour, daily, weekly, and monthly data. The following table shows all of the historical database tables and the maximum amount of time data can be stored in a particular table:

Historical database tables	Maximum time for data storage
Intrahour historical data	62 days
Daily historical data	5 years (1825 days)
Weekly historical data	10 years (520 weeks)
Monthly historical data	10 years (120 months)

Note:

You can use historical data to predict future call traffic and future agent and trunk requirements. For more information see *Avaya CMS Forecast User Guide*.

Data summarizing

When CMS collects data from the ACD, the data is stored in the real-time database for the current interval. At the end of the current interval, the following events occur:

- The data that was in current interval database table is archived to the previous interval database table.
- The data that was in previous interval database table is archived in the historical database as intrahour historical data.

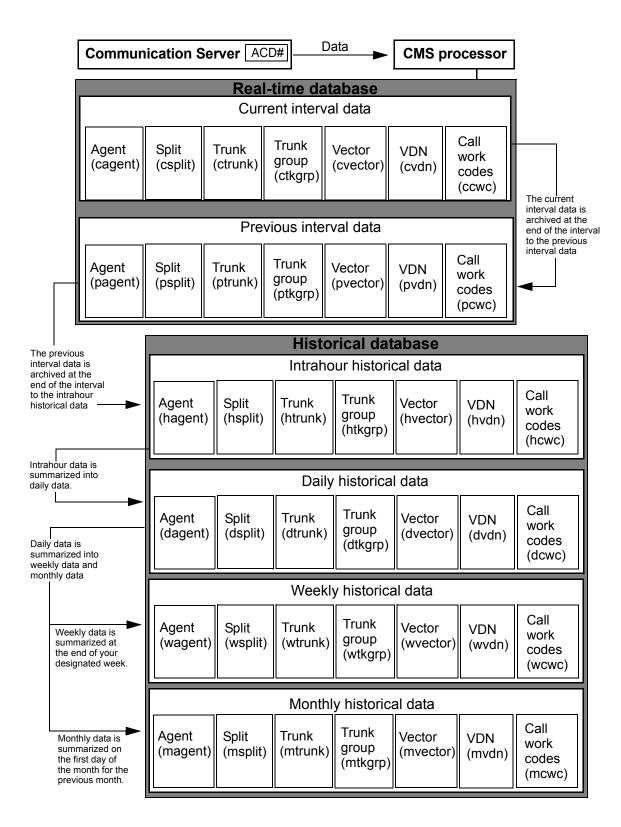

The data remains in the historical database as intrahour historical data for a maximum of 62 days. At your designated data summarizing time, the intrahour historical data is summarized into daily historical data.

The daily historical data is summarized on a weekly and monthly basis. At the end of your designated week, the daily historical data is summarized into weekly historical data. On the first day of a new month, the daily historical data is summarized into monthly historical data for the previous month.

For more information, see <u>CMS data storage</u> on page 27.

CMS data storage

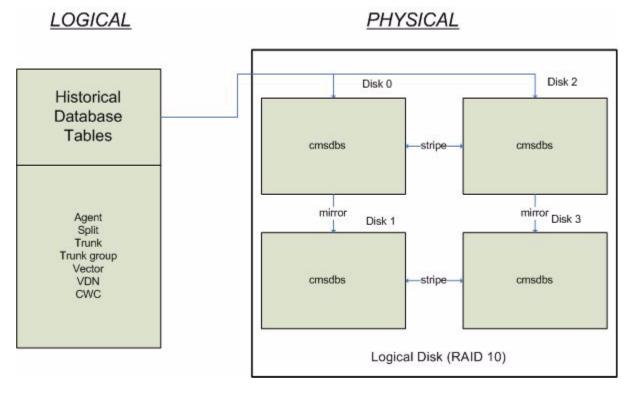

The following figure illustrates how CMS stores data.

How Avaya CMS physically stores ACD data

CMS uses Informix Dynamic Server (IDS) as the relational database. IDS manages the CMS data in specific dbspaces. The historical database can span multiple disks. Hardware RAID is used to span multiple disks of the CMS system. CMS systems use RAID 10 which stripes the data across multiple disks and also mirrors pairs of the striped disks.

The cmsdbs dbspace contains the CMS historical data.

Note:

This figure is an example based on a physical disk system consisting of four disks. The actual CMS system you use can have a different number of total disks.

Dbspace

A dbspace is a logical unit that consists of one or more chunks. Dbspaces can exist across multiple disks. A CMS system contains the following dbspaces:

- rootdbs
- physdbs
- logdbs
- dbtemp

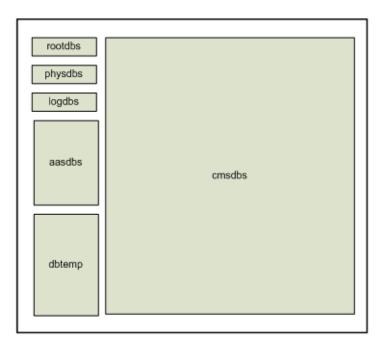

- aasdbs
- cmsdbs

Do not attempt to alter rootdbs, physdbs, logdbs, dbtemp, aasdbs, or cmsdbs. Contact CMS services if you think you have a problem with any of these dbspaces.

Chunks

A chunk is a unit of physical disk space used to store database data that is managed by IDS. For CMS, each dbspace contains one chunk. The size of each chunk is based on the data requirement specification of CMS. The following figure shows an example of chunk sizing. IDS requires the rootdbs, physdb, and logdbs dbspaces, but they store minimal data. Dbspace dbtemp is larger and is used for temporary data space. Dbspace aasdbs is used to store data related to the Visual Vectors option for CMS. Dbspace cmsdbs is the location where all CMS data is stored and contains the largest chunk of data.

ACD Administration

CMS provides an administrative interface to the communication server. From the ACD interface, you can view or change parameters on the communication server related to ACDs, Call Vectoring, and Expert Agent Selection (EAS). An administrator can also run reports that describe your contact center configuration.

For example, an administrator can:

- Add or remove agents from splits or skills
- Move extensions between splits
- Change skill assignments
- Change trunk group-to-split
- Change trunk group-to-VDN
- Change VDN-to-vector assignments
- Start an agent trace
- List the agents being traced
- Create, copy, and edit call vectors

How Avaya CMS tracks ACD data

CMS uses the data in the real-time and historical databases to generate standard reports that help you monitor your contact center's activities. Various agent, split/skill, trunk, trunk group, vector, and VDN activities are tracked at different points in the call process.

This section includes the following topics:

- How CMS tracks a call on page 31
- Events that start or stop data collection on page 32

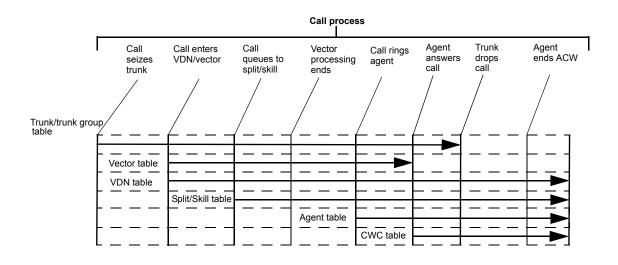

How CMS tracks a call

The following diagram shows how CMS tracks a call from the time the call seizes a trunk until an agent ends after-call-work (ACW) activity.

The trunk table, trunk group table, vector table, VDN table, split/skill table, agent table, and call work code (CWC) table are CMS database tables that store call data. In the following diagram, the positions of the CMS database tables identify the points where CMS begins to collect call data. The arrowheads identify the points where data collection ends. The data is not recorded in the tables until the call and any ACW is complete.

Note:

With vectoring, the Stop command stops the processing of vector commands.

Events that start or stop data collection

Data collection starts or stops when one of these events occur:

- The Agent table starts collecting data on non-ACD calls when the agent answers or completes dialing.
- The Split/Skill table stops collecting data when:
 - The ACW for an ACD call ends
 - The call leaves the split queue and is forwarded to another destination (for example, intraflow)
 - The caller abandons the call
- The Vector table stops collecting data for the current vector when the call is:
 - Sent to an ACD agent
 - Connected to a station or trunk
 - Routed to a VDN or vector
 - Abandoned by the caller

Note:

Time in the vector stops but the vector tracks the call disposition to determine if the call was answered or abandoned.

- The VDN table stops collecting data for the current VDN when:
 - The ACW for an ACD call ends
 - The call is routed to a trunk or VDN

- The call is transferred
- The caller abandons the call

Chapter 1: Introduction to CMS Administration

Chapter 2: Configuring Avaya CMS Supervisor

This section contains information regarding configuration of Avaya CMS Supervisor through the **Options** window.

The **Options** window allows you to adjust and control the following types of settings:

- The default ACD for all operations and reports windows
- Scripting defaults
- Colors used in Supervisor reports
- Formatting of the different types of fields displayed in Supervisor reports

This section contains the following topics:

- <u>Before you begin</u> on page 35
- Controller features on page 36
- General tab on page 38
- <u>Scripting tab</u> on page 39
- <u>Report Colors tab</u> on page 40
- Creating a new report color scheme on page 40
- Threshold Colors tab on page 41
- Creating a new threshold color scheme on page 42
- Name Format tab on page 43
- Defining entity formats on page 43

Before you begin

Except for the **CMS Servers** tab, all other tabs of the **Options** window are only available after a successful login to a *CMS* server. The **CMS Servers** tab is disabled when you are logged in to a *CMS* server.

Controller features

This section includes the following topics:

- Overview of the Controller on page 36
- <u>Toolbar</u> on page 36
- <u>Status indicators</u> on page 36
- Status messages on page 37
- Menu bar on page 38

Overview of the Controller

When you are logged into the CMS server, the toolbar, status bar, and menu bar have additional functions. Your CMS user permissions determines which of the menu items and toolbar buttons are available to you.

Toolbar

The toolbar contains buttons for quick access to specific features of the application. When you move your cursor over a toolbar button, a tooltip displays with a brief description of the command the button performs and a tooltip. For more information, see the specific sections on these features.

Status indicators

These indicators on the status bar tell you about the state of CMS.

Indicator	Displays	
Login status	n status A green light if you are connected to the CMS server, and a gray light if y are not connected.	
Exception counter	An exception count of the ACDs for which you have exception permissions. The count is cleared to zero at the beginning of an interval.	

Indicator	Displays
ACD status	Icons for the ACDs that are supported by the CMS. If the link to an ACD is down, the icon is crossed out. If the CMS server is connected to the ACD through a TCP/IP connection and the connection is in a transient (stalled) state, the icon changes to a straight line. If you place your mouse over an indicator, a tooltip displays the name of the ACD.
Date and time	Current date and time of the CMS server you are logged into.

Status messages

The status bar of the **Controller** window and other Avaya CMS Supervisor windows may display any of the following Avaya CMS status messages.

Message	Displays when
Working	An action is incomplete. The window is locked during this time.
Successful	An action completes without errors.
Error	A syntactical error is found in a field. An error message with field help also appears.
Failed	An action request cannot complete. An Acknowledgement window explains why the request failed.
Does not exist	A record you are trying to modify, delete, or for which you are searching is not found in the database.
Already exists	A record you are trying to add is found in the database. This message also displays when you attempt to add a range of items, some of which exist and some of which do not. The ones that do not exist are added to the database; the ones that already exist are left unchanged.
Cancelled	You cancel a potentially destructive action in an Acknowledgement window.
No matches found	A Find one action completes.
N matches found; permitted ones displayed	A List all action completes, reminding you that you may not have permission to view or modify all matches found.

Message	Displays when
No permission	You do not have read permission for the match or matches found in the search. This may occur on the first match found doing a Find one or on any match doing a Next or Previous .
See status window	A status window appears to further explain the condition.

Menu bar

This section identifies the five menus that are available after you log into the CMS server: Connect, Commands, Tools, Scripts, and Help. For more information, see the specific sections on these features.

General tab

Use the **General** tab to set your first calendar day, default ACD, and other interface usage options.

This tab of the **Options** dialog contains the following controls:

- First Day of Week This option affects only how the calendar is displayed. For example, if you browse for a date, the calendar starts the week based on the day that you choose. It does not change the *Start of Week* day for weekly data collection which is set through the **System Setup Storage Intervals** window.
- **Default ACD** Select the ACD that will be used as the default ACD for operations and reports windows. Note that an ACD Group can also be set as the default.
- Synchronize PC and CMS Time at Login Select this check box to change the internal clock of the PC to match the current time on the CMS server. This option does not affect the time on the CMS server.
- Use Sound Select this check box to receive an audible alert when the Exceptions Indicator box is updated. The Exceptions Indicator box is located on the Controller status bar. The sound that you hear is the sound that you chose for the *exclamation event* in Windows. Note that Threshold Highlighting does not use sound. It uses color only as an indicator of a threshold being met.
- Use Tooltips Select this check box to make tooltips visible for the controls in the *Supervisor* interface. For example, when you are working in the *Supervisor* Controller window, you can place your mouse cursor over a toolbar button and the system displays a yellow box that provides a brief description of that button.

- Use Taskbar Icon Select this check box to have *Supervisor* place an icon in the system tray.
- Window Menu Sort Order Use this option group to determine how items that are displayed in the menu for system tray icon are sorted:
 - Start Order Select this option to display the items in the system tray icon menu where the last item used appears at the top of the menu.
 - Alphabetical Select this option to display the items in the system tray icon menu in alphabetical order.

Scripting tab

Use the **Scripting** tab to set the user ID used to run scripts, adjust the logging level, and set the file used for logging.

This tab of the **Options** dialog contains the following controls:

- User ID The login ID for a CMS user.
- Set User Button Select this button to open the Save as Script User Information dialog box.
- **Logging Level** This option group allows the following logging levels in configuring the amount of information that is recorded during the use of scripting:
 - Minimum The only activities that will be logged are errors and messages from Supervisor that would have been displayed to the window as if the user performed the scripted activity manually.
 - Normal All of the above activities are logged plus the start and stop time of each task of the script. The script name is also included.
 - Maximum All of the above activities are logged plus additional information that may be useful for debugging a script. Any message that displays as the script runs is logged.
- Log File Path Enter the path and filename of the logfile in this field. You may also use the Browse button to the right of this field to select an existing file on the PC.
- Log File Size This field determines how large the script log file can get before it is begins replacing the oldest data. The field defaults to a value of 200KB.
- View Log Button Select this button to view the script log file.

Report Colors tab

Use the **Report Colors** tab to set the colors that are used in your graphical reports.

This tab of the **Options** dialog contains the following controls:

- Scheme This drop-down list box contains all of the existing color schemes available.
- Save As Selecting this button saves any changes made in the color bar window as a new scheme. See <u>Creating a new report color scheme</u> on page 40 for instructions on creating report color schemes.
- Remove Selecting this button deletes the currently displayed scheme.
- Color window This displays of 16 bars allows you to change the color and pattern of each bar by performing a right-click on that bar.
- Background There are two choices for the background color of reports:
 - White Select this option to display a white background for all reports.
 - Automatic Select this option to have the background of all reports use the color scheme configured through *Windows*.

Creating a new report color scheme

To create a new color scheme for reports:

1. From the menu bar of the Controller window, select **Tools** > **Options**.

Supervisor displays the **Options** window.

- 2. Select the **Report Colors** tab.
- 3. From the **Scheme** drop-down list, select the color scheme you want to use as a basis for the new color scheme.

Supervisor displays the configuration of the scheme in the color bar window.

- 4. From the **Background** options, select **White** or **Automatic**.
- 5. Click the color bar (1 through 16) that you want to modify.
- 6. If you want to modify the color, select the **Change Color** button and select the color through the **Color** dialog that is displayed.
- 7. If you want to modify the pattern, select the **Change Pattern** button and select the pattern from the resulting list.
- 8. Repeat Step 5 through Step 7 until you have updated all of the color bars that you want to modify.

9. When you are done modifying color bars, select the **Save As** button.

Supervisor displays the Save Scheme As window.

Note:

If you do not save the new color scheme using the **Save As** button, the changes that you have made will overwrite the default color scheme that you modified.

- 10. Enter a name for this new color scheme in the text box.
- 11. Select **OK** to save this scheme.

To view the changes that you made to a color scheme at any point in the modification, select the **Apply** button. The current color scheme is then applied to any reports that are running.

Threshold Colors tab

Use the **Threshold Colors** tab to set the colors that are used in reports to notify you when exceptions thresholds are reached.

This tab of the **Options** dialog contains the following controls:

- Scheme This drop-down list box contains all of the existing color schemes available.
- Save As Selecting this button saves any changes made in the color bar window as a new scheme. See <u>Creating a new threshold color scheme</u> on page 42 for instructions on creating new color schemes.
- **Remove** Selecting this button deletes the currently displayed scheme.
- View/set colors for report threshold indicators This list box displays the states used for exception thresholds. A graphical representation of the selected state is displayed in the area to the right.
- **Color** Use the button to the right of this field to change the color for the selected exception threshold state.
- Pattern Use the button to the right of this field to change the graphical pattern applied for the selected exception threshold state.

Creating a new threshold color scheme

To create a new threshold color scheme for reports:

- From the menu bar of the Controller window, select **Tools > Options**.
 Supervisor displays the **Options** window.
- 2. Select the **Threshold Colors** tab.
- 3. From the **Scheme** drop-down list, select the color scheme you want to use as a basis for the new color scheme.

Supervisor displays the view of the scheme.

4. In the **View/set colors for report threshold indicators** list, select the item you want to change.

Supervisor displays the current setting for the selected item in the area to the right of the list box. The **Color:** and **Pattern:/Background:** fields display the respective settings for the current item.

5. If you want to change the color of the selected item, select the **Change Color** button at the right of the **Color:** field.

Supervisor displays the standard **Color** window from Windows allowing you to select the new color.

6. If you want to change the pattern/background color for the selected item, select the button at the right of the **Pattern:/Background:** field.

Depending on the item selected, *Supervisor* will display either the pattern list or the **Color** window which allows you to select a new pattern or background color.

- 7. Repeat Steps 4 through 6 until you have updated all of the threshold element colors that you want to modify.
- 8. When you are done modifying the threshold element colors, select the **Save As** button.

Supervisor displays the Save Scheme As window:

- 9. In the text box, enter a name for this new threshold color scheme you have just created.
- 10. Select the **OK** button to save this new color scheme.

To view the changes that you made to a color scheme at any point in the modification, select the **Apply** button. The current color scheme is then applied to any reports that are running.

Name Format tab

Use the **Name Format** tab to choose or create formats for how *CMS* entities (splits/skills, ACDs, VDNs, vectors, trunks, trunk groups, call work codes, and AUX codes) are displayed in *Supervisor*. The display can be set to any one or a combination of {name} for Dictionary Name, {entity} for entity type, and {number} for entity number.

Choose or create a name format using {name} for entity name (as entered in the Dictionary), {entity} for entity type, and {number} for entity number. These formats determine how items are displayed in reports. For example, if you select the name format of {entity}{number}, all of the entities that can be named in the Dictionary are displayed as the entity type and number instead of the name defined in the Dictionary. If you selected {name} as the name format, the names that are assigned to the entities in the Dictionary are displayed.

Defining entity formats

To define the name format for an entity:

- 1. From the **Entity** field, select the item for which you want to change the format.
- 2. In the **Format** field, use one of the following methods to select a format for the specified entity type:
 - Manually enter the format that you want using the three possible types: {name}, {entity}, and/or {number}. It is not necessary to use a separator character between formats unless you want the separator to appear in the report.
 For example, if you want to display agent names and extension numbers on reports, enter {name} {number} in the Format box.
 - Use the drop-down list to choose from a set of preformatted options.

The **Example** field provides an example of what the format looks like based on your current definition.

If you entered a nonstandard name format, it is not saved in the Format list.

3. Select **OK** to save your changes.

Chapter 2: Configuring Avaya CMS Supervisor

Chapter 3: Using the Dictionary to name contact center entities

This section provides information on procedures for using the Dictionary to administer names associated with contact center entities.

This section includes the following topics:

- About the Dictionary on page 46
- Before you begin on page 46
- Dictionary rules on page 47
- Searching the Dictionary on page 48
- ACD Groups on page 49
- ACDs on page 51
- Agent groups on page 53
- Agent string values on page 58
- Announcements on page 61
- AUX reason code names on page 65
- <u>Calculations</u> on page 69
- <u>Call work codes</u> on page 73
- Constants on page 77
- <u>Custom database items</u> on page 80
- <u>Generic string values synonyms</u> on page 83
- Location IDs on page 84
- Login ID names on page 87
- Logout reason code names on page 91
- Split/skill string values on page 95
- Split/Skill names on page 98
- Standard database items on page 102
- Trunk group names on page 104
- <u>Trunk string values</u> on page 108
- <u>VDN names</u> on page 110

- <u>Vector names</u> on page 114
- Dictionary reports on page 118

About the Dictionary

The Dictionary subsystem is used to assign synonyms or names to contact center entities. The following list gives a short sample of the items used in the Dictionary:

- Login IDs
- Splits/skills
- Call work codes
- ACDs
- AUX reason codes
- Logout reason codes
- Trunk groups
- VDNs
- Vectors

The Dictionary also allows users to work with items in the database such as:

- Viewing standard database items
- Viewing standard calculations
- Creating and administering custom calculations
- Creating and administering constants
- Creating and administering custom database items

The names assigned through the Dictionary appear on reports to help users understand them better. The Dictionary also makes it possible for users to create agent groups, change agent splits/skills, and change trunk string values for reporting purposes. The Dictionary also provides a global search function to find any item within it.

Before you begin

If an ACD Group is selected as the current ACD in the **Dictionary** window, only those operations that are valid for the ACD Group will appear in the **Operations:** list.

Dictionary rules

The following rules apply to the names assigned in the Dictionary:

- Dictionary names can have from 1 to 20 characters.
- Names (synonyms) must begin with an alphabetic character.
- Dictionary names can include the following characters:
 - Any alphanumeric character
 - Underscore (_)
 - Blank ()
 - Comma (,)
 - Period (.)
 - Apostrophe (')
 - Plus sign (+)
- Blanks () are allowed in all Dictionary names *except*:
 - Calculation names
 - Constant names
- Names must be unique within each section of the Dictionary for an ACD.

For example, you can name trunk group 1 as *sales*, and split/skill 1 as *sales*, but you cannot name split/skill 1 as *sales* and split/skill 2 as *sales* on the same ACD.

• Fields and entries made in the Dictionary are case-sensitive.

The following rules apply to the descriptions assigned in the Dictionary:

- Descriptions in the Dictionary can have from 1 to 50 characters.
- Descriptions can include all printable characters except:
 - Semicolon (;)
 - Backward slash (\)
 - Grave accent (`)
 - Tilde (~)
 - Double quotes (")
 - Pipe symbol (|)
 - Asterisk (*)
 - Question mark (?)

Searching the Dictionary

The Dictionary contains a global search feature that can be used to find a wide variety of information. Some examples of the types of information you can search for in the dictionary are:

- A login ID or a group of login IDs
- A split, skill, or trunk group
- ACD names
- Database items
- Calculations
- Agent names

Permissions

To do a global search in the dictionary, you need *write* permissions for the Dictionary subsystem.

Steps

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

2. In the **Operations:** list, highlight **Global Search**.

Supervisor displays the Dictionary Global Search Input window.

Note:

Remember the following before entering search criteria:

- You can search on any pattern
- You can include an asterisk (*) or question mark (?) in your pattern
- The search is case sensitive
- 3. In the **Search for:** field, enter the item name or pattern.
- 4. From the **Actions** menu, select **Run**.

Supervisor displays the Dictionary Global Search Results window.

Field	Contents
Value matched	Displays the matches for your pattern.
Field matched	Displays the name of the field in the Dictionary that corresponds to value matched.

In submenu	The Dictionary submenu where your search pattern was found.
Name	The name that corresponds to the value matched.

ACD Groups

This section provides information for viewing ACD Groups in the Dictionary. ACD Groups and the corresponding members can only be viewed through the **Dictionary Operations** window. Administration of ACD Groups is done through the **Call Center Administration** subsystem. The capability of viewing ACD Groups through the **Dictionary** subsystem allows those individuals who only run reports in the contact center to view which ACDs are defined within each ACD Group. This capability can assist these individuals in determining which ACD Groups should be used when running reports.

Note:

ACD Groups cannot be selected to display information through standard *CMS* reports. To run reports for ACD Groups, you will need to create custom reports through the *CMS* ASCII interface or have them created for you by contacting the Avaya Professional Services Organization.

This section contains the following topics:

- Before you begin on page 49
- Permissions on page 50
- Listing all ACD Groups on page 50
- Viewing the contents of an ACD Group on page 51

Related topic

For more information on ACD Groups and their usage, see <u>ACD Groups</u> on page 159.

Before you begin

The following should be read and understood before working with ACD Groups in the Dictionary:

- If you add an ACD Group, you will need to log out of *Supervisor* and log back in to see this group as a choice in the appropriate dialogs.
- An ACD Group cannot serve as the CMS master ACD.

- Overlapping ACD Groups (groups having common member ACDs), could result in synonym conflict within the members of an ACD Group if poorly administered. Because of this capability, entity IDs in overlapping ACD Groups must be mutually exclusive.
- Entity synonyms must be unique for an ACD Group and across all of the ACDs that are members of the ACD Group.
- User permissions are administered separately for an ACD Group and its member ACDs.
- CMS real-time custom reports are only displayed if data collection is enabled and the ACD link status is 'up' for at least one member ACD in the specified ACD Group. An error message will be displayed if these conditions are not met.
- Custom reports that are created with the **Single ACD Only** option enabled cannot be run for an ACD Group and vice versa.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To view ACD Group names, you need *read* permissions for the Dictionary subsystem and the ACD Group.

Listing all ACD Groups

To view all ACD Groups defined on the CMS server:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Dictionary ACD Groups window.

4. From the menu bar, select **Actions** > **List all**.

Supervisor displays the **Dictionary ACD Groups List all** window listing all ACD Groups defined on this *CMS* server.

Viewing the contents of an ACD Group

To view the ACDs assigned to an ACD Group:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Dictionary ACD Groups window.

- 4. In the ACD Group Name: field, enter the name of the ACD Group that you want to view.
- 5. From the menu bar, select **Actions > Find one**.

Supervisor retrieves the information for the specified ACD Group, if valid.

6. From the menu bar, select **Actions > Get contents**.

Supervisor displays the **Dictionary ACD Groups Get contents** window which lists all ACDs assigned to this ACD Group.

ACDs

This section provides information on administering ACD names in the Dictionary. The **Dictionary Operations** window is used to assign names to real and pseudo ACDs. Generated reports will contain the ACDs names, rather than the assigned ACD numbers.

You can add, delete, or change an ACD name regardless of the ACD that you are currently logged in to. For example, you can be logged in to ACD 1 and change the name for ACD 3. This change does not appear on the changed window border of the ACD until you open a new window.

The Dictionary naming rules apply to these procedures. See <u>Dictionary rules</u> on page 47 for more information.

This section contains the following topics:

- <u>Permissions</u> on page 52
- Adding an ACD name on page 52
- Modifying an ACD name on page 52
- Deleting an ACD Name on page 53

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To add, delete, or modify the name of an ACD, you need *write* permissions for the Dictionary subsystem and for the ACD.
- To view ACD names, you need *read* permissions for the Dictionary subsystem and for the ACD.

Adding an ACD name

To add a name for an ACD to the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **ACDs**.
- 3. Select OK.

Supervisor displays the Dictionary ACDs window.

4. In the **ACD Name:** field, enter the name of the ACD or ACD Group that you want to add, delete, or change.

The name you assign to an ACD, pseudo ACD, or ACD Group in the Dictionary is displayed on all reports and window titles that are associated with that ACD.

5. In the **ACD Number:** field, enter a number between 1 and 38 to correspond with the new ACD name where 1 through 8 is reserved for real ACDs, 9 through 26 is reserved for pseudo-ACDs, and 27 through 38 is reserved for ACD Groups.

Any additional information about the ACD can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

6. To add your changes to the Dictionary, select **Actions > Add**.

Modifying an ACD name

To modify the name of an ACD in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **ACDs**.

3. Select OK.

Supervisor displays the Dictionary ACDs window.

- 4. In the **ACD Number:** field, enter the number of the ACD, pseudo-ACD, or ACD Group that you want to modify.
- 5. From the **Actions** menu, select **Find One**.
- 6. In the ACD Name: field, enter the new name for the selected ACD.
- 7. To add your changes to the Dictionary, select Actions > Modify.

Deleting an ACD Name

Important:

Deleting an ACD name from the Dictionary only removes the name of the ACD. The ACD is then displayed as **unnamed_acd** *n* where *n* is the number of the ACD. No warnings are given during the process of deleting an ACD name. This procedure should not be performed unless you are certain that you want to delete the ACD name.

To delete the name of an ACD in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **ACDs**.
- 3. Select OK.

Supervisor displays the Dictionary window.

- 4. In the **ACD Number:** field, enter the number of the ACD, psuedo-ACD, or ACD Group for which you want to delete the name.
- 5. From the Actions menu, select Find One.

The name of the ACD is displayed in the **ACD Name:** field.

6. Select **Actions > Delete** to remove the ACD from the Dictionary.

Agent groups

This section provides procedures for creating and naming, copying, and deleting agent groups in the Dictionary using the **Agent Groups** window.

Agents can be grouped for reporting purposes, without regard to the split/skill assignment for the agent. For example, you can create a group for new employees or a group for employees with special skills.

This section contains the following topics:

- <u>Permissions</u> on page 54
- Considerations when sizing and reporting on agent groups on page 54
- Adding an agent group on page 55
- Listing agents in an agent group on page 55
- <u>Copying an existing agent group to a new name</u> on page 56
- Adding agents to an existing agent group on page 56
- Deleting agents in an existing agent group on page 57
- Deleting an agent group on page 57

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To add, delete, or modify agent groups, you need *write* permissions for the Dictionary subsystem.
- To view agent groups, you need *read* permissions for the Dictionary subsystem.
- For more information on considerations on creating agent groups, see <u>Considerations</u> when sizing and reporting on agent groups on page 54.

Considerations when sizing and reporting on agent groups

When creating agent groups, consider the following sizing and reporting recommendations:

 The size of agent groups should be limited to approximately 30 agents. Any agent groups larger than 30 agents should be avoided because system performance will be adversely affected.

Note:

The new CMS systems have a customer administrable flag for limiting the historical and real time reporting on agent groups to groups of 30 or less. See section <u>Administering Report Properties</u> on page 398 for more information on this topic.

- When possible, report on consecutive Agent IDs in the same report.
- When possible, limit agent group reports and use skill-based reports.

Adding an agent group

To add an agent group to the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Agent Groups**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to create the agent group.
- 4. Select **OK**.

Supervisor displays the Dictionary Agent Groups window.

- 5. In the **Agent group name:** field, enter the name of the new agent group.
- 6. To add the agent group to the Dictionary, select **Actions > Add**.
- To add the Login IDs for this agent group, select Actions > Get Contents.
 Supervisor displays the Agent Groups-Get Contents window.
- 8. Enter the Login IDs for the new group.
- 9. To add the Login IDs to the Dictionary for this agent group, select the **Actions** > **Add**.

Listing agents in an agent group

To list the agents defined in an agent group in the Dictionary:

1. From the Controller Window, select **Commands** > **Dictionary**.

Supervisor displays the **Dictionary** window.

- 2. In the **Operations:** list, highlight **Agent Groups**.
- 3. In the **ACD**: field, enter the ACD or ACD Group on which the agent group exists.
- 4. Select OK.

Supervisor displays the Dictionary Agent Groups window.

- 5. In the **Agent group name:** field, enter the name of the agent group.
- 6. From the **Actions** menu, select **Get contents**.

Supervisor displays the Agent Groups-Get Contents window.

7. From the Actions menu, select List All.

Supervisor displays the **Dictionary Agent Groups-Get Contents-List All** window listing the agents in the group.

Copying an existing agent group to a new name

To copy an existing agent group in the Dictionary to a new name:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Agent Groups**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the agent group exists.
- Select OK.
 Supervisor displays the Dictionary Agent Groups window.
- 5. In the Agent group name: field, enter the name of the new agent group.
- From the Actions menu, select Copy Group.
 Supervisor displays the Dictionary-Agent Groups-Copy window.
- 7. In the **Copy from:** field, enter the name of the agent group that you want to copy.
- 8. From the **Actions** menu, select **Copy Group**.

The new agent group is automatically populated with all the agents from the copied group.

Adding agents to an existing agent group

To add agents to a group that already exists in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Agent Groups**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the agent group exists.
- 4. Select OK.

Supervisor displays the Dictionary Agent Groups window.

- 5. In the **Agent group name:** field, enter the name of the agent group to which you will add agents.
- From the Actions menu, select Get Contents.
 Supervisor displays the Dictionary-Agent Groups-Get Contents window.
- 7. Enter the Login IDs that you want to add to this group.
- 8. From the Actions menu, select Add.

Deleting agents in an existing agent group

To delete agents from an existing group in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Agent Groups**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the agent group exists.
- 4. Select OK.

Supervisor displays the Dictionary Agent Groups window.

- 5. In the **Agent group name:** field, enter the name of the agent group from which agents will be deleted.
- From the Actions menu, select Get contents.
 Supervisor displays the Agent Groups-Get Contents window.
- 7. Enter the Login IDs to delete from this group.
- 8. From the Actions menu, select Delete.

Deleting an agent group

To delete an agent group from the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Agent Groups**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the agent group exists.
- 4. Select OK.

Supervisor displays the Dictionary Agent Groups window.

- 5. In the **Agent group name:** field, enter the name of the agent group to delete.
- 6. From the **Actions** menu, select **Delete**.

The selected agent group name is removed from the Dictionary.

Agent string values

Agent string values are the descriptive words in reports that correspond with agent states. These words, such as ACD, ACW, or AUX, describe the value of the data. Strings are changed to the values you administer when they are displayed as data in a report. The report heading is not affected.

This section contains the following topics:

- <u>Permissions</u> on page 58
- Changing agent string value descriptions on page 58
- Agent string value field descriptions on page 59

Permissions

Depending on the procedure that you want to perform, you will need the following permissions:

- To modify agent string values, you need *write* permissions for the Dictionary subsystem.
- To view agent string values, you need *read* permissions for the Dictionary subsystem.

Changing agent string value descriptions

To change agents string value descriptions in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the **Dictionary** window.

- 2. In the **Operations:** list, highlight **Agent String Values**.
- 3. In the **ACD**: field, select the ACD or ACD Group that you want to modify.

Supervisor displays the Dictionary Agent String Values window.

4. Enter a new descriptive word in the field that you want to change. See <u>Agent string value</u> <u>field descriptions</u> on page 59 for field descriptions.

Agent string value field descriptions

The following table describes the fields for the agent string values:

Field	Description
Work Mode	To change any of the work-mode default names, enter the new descriptive word in the appropriate work mode field. Agents can be in any one of the following work modes:
	 ACD - The agent is on an ACD call.
	 ACW - The agent is in the after-call work mode.
	 AUX - The agent is in the auxiliary work mode.
	 AVAIL - The agent is available to take an ACD call.
	 DACD - The agent is on a direct agent ACD call.
	 DACW - The agent is in the after-call work mode for a direct agent ACD call.
	• OTHER - The agent has just logged in and <i>CMS</i> has not yet been notified of the agent's state, or the agent is dialing to place an extension call while in auto-in/manual-in (AI/MI), or the agent is in AI/MI and has an extension call ringing, or the agent has put a call on hold and has taken no further call-related action.
	 RINGING - An ACD call is ringing at the agent's voice terminal and the agent is not doing anything else.
	 UNKNOWN - CMS does not recognize the current state.
	 UNSTAFF - The agent is not logged in (is not staffed).
Agent Trace Work Mode	To change the agent trace, work-mode default names, enter the new descriptive word next to LOGON or LOGOFF.
	 LOGON - An agent is logged in.
	 LOGOFF - An agent is logged out and is not available to take ACD calls.
Call Handling Preference	To change the call-handling preference default names, enter the new descriptive word next to LEVEL, NEED, or PERCENT.
	 LEVEL - The agent's call-handling preference is by skill level.
	NEED - The agent's call-handling preference is by greatest need.
	 PERCENT - The agent's call-handling preference is based on an assigned percentage of time allocated to each skill.
Reserve Level	To change the reserve-level default names, enter the new descriptive word next to Rsv1 or Rsv2.
	 Rsv1 - The agent begins answering calls when the skill's 1st threshold is crossed.
	 Rsv2 - The agent begins answering calls when the skill's second threshold is crossed.

Field	Description
Call Direction	 To change the call-direction default names, enter the new descriptive word next to IN or OUT. IN - The agent is on an incoming call. OUT - The agent is on an outbound call.
Call Origination	 To change the call-origination default names, enter the new descriptive word next to PHONE or KEYBOARD. Agents can be on either type of the following outbound calls: PHONE - The agent dialed an outbound call using the voice terminal dial pad. KEYBOARD - The agent dialed an outbound call using the computer keyboard.
Call Destination	 To change the call-destination default names, enter the new descriptive word next to PBX or OFF. PBX - Internal to the switch. OFF - External to the switch.
Agent Role	 To change the agent role default names, enter the new descriptive word next to TOP, ALLOCATED, BACKUP, ROVING, or RESERVE. TOP - The agent can be counted on to answer the skill's calls (unless an agent's other skills go into overload). ALLOCATED - The agent has a percentage of his/her time allocated to answering the skill's calls. BACKUP - The agent helps to answer the skill's calls when his/her top skill is not busy. ROVING - The agent answers a skill's calls when this skill has the greatest need. RESERVE - The agent helps answer the skill's calls when the skill is over threshold. These roles vary according to call-handling preference.

Field	Description
Interrupt Type	To change the interrupt type default names, enter the new descriptive word next to NA, AUTO-IN, MANUAL-IN, NOTIFY.
	 NA – Not interruptible when the agent is in AUX.
	 AUTO-IN – Auto in interrupt.
	 Manual-IN – Manual in interrupt.
	 Notify – Agent will be notified of the interrupt and can choose whether to accept of reject the interrupt.
Interrupt Status	To change the interrupt status default names, enter the new descriptive word next to NA, NOTIFYING, INTRRPTED, INTRRPTBLE.
	 NA – The agent is not in the interruptible AUX state.
	 NOTIFYING – The agent is being notified of an interrupt while in the interruptible AUX state.
	 INTRRPTED – The agent is interrupted in the interruptible AUX state and is handling a call.
	 INTRRPTBLE – The agent is in the interruptible AUX state.

Announcements

This section provides information on working with announcement names in the Dictionary. Announcements are recorded messages that are played for callers. Announcement names are synonyms assigned to these recorded messages in the Dictionary.

This section contains the following topics:

- <u>Permissions</u> on page 62
- Before you begin on page 62
- Adding an announcement name on page 62
- Viewing an announcement name on page 63
- Listing all announcement names for an ACD on page 63
- Modifying an announcement name on page 64
- Deleting an announcement name on page 64

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view announcement names, you need *read* permissions for the Dictionary subsystem.
- To add, delete, or modify announcement names, you need *write* permissions for the Dictionary subsystem.

Before you begin

The following items should be read and understood before working with announcement names in the Dictionary:

- Announcement names must be unique.
- Multiple values are not allowed for announcement names or numbers.

Adding an announcement name

To add a name for an announcement to the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Announcements**.
- 3. In the ACD: field, enter the ACD on which the announcement resides.
- 4. Select OK.

Supervisor displays the Dictionary Announcements window.

- 5. In the **Announcement Name:** field, enter the name that you want to assign to the announcement.
- 6. In the **Announcement Number:** field, enter a number that will correspond with the announcement name.

Any additional information about the announcement can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the Action menu, select Add.

Viewing an announcement name

To view an announcement name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Announcements**.
- 3. In the ACD: field, enter the ACD on which the announcement resides.
- 4. Select OK.

Supervisor displays the Dictionary Announcements window.

- 5. To find an announcement name to view, only one of the fields requires an announcement to be specified. Perform one of the following actions to specify an existing announcement in the Dictionary:
 - In the Announcement Name: field, enter the synonym name of the announcement.
 - In the Announcement Number: field, enter the number of the announcement.
- 6. From the **Action** menu, select **Find One**.

Supervisor retrieves and displays the data for the specified announcement, if valid.

Listing all announcement names for an ACD

To list all announcement names that are defined in the Dictionary for an ACD:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Announcements**.
- 3. In the **ACD**: field, enter the ACD on which the announcement resides.
- 4. Select OK.

Supervisor displays the Dictionary Announcements window.

5. From the Action menu, select List All.

Modifying an announcement name

To modify an announcement name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Announcements**.
- 3. In the ACD: field, enter the ACD on which the announcement resides.
- 4. Select OK.

Supervisor displays the Dictionary Announcements window.

- 5. To find an announcement name to modify, only one of the fields requires an announcement to be specified so that it can be found. Perform one of the following actions to specify an existing announcement in the Dictionary:
 - In the Announcement Name: field, enter the name of the announcement.
 - In the Announcement Number: field, enter the number of the announcement.
- 6. From the **Action** menu, select **Find One**.

Supervisor retrieves and displays the data for the specified announcement, if valid.

- 7. In the Announcement Name: field, enter the new announcement name.
- 8. From the Action menu, select Modify.

Deleting an announcement name

To delete an announcement name in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Announcements**.
- 3. In the **ACD:** field, enter the ACD on which the announcement resides.
- 4. Select OK.

Supervisor displays the Dictionary Announcements window.

- 5. To find an announcement name to delete, only one of the fields requires an announcement to be specified so that it can be found in the Dictionary. Perform one of the following actions to specify an existing announcement in the Dictionary:
 - In the Announcement Name: field, enter the name of the announcement.
 - In the **Announcement Number:** field, enter the number of the announcement.

6. From the Action menu, select Find One.

Supervisor retrieves and displays the data for the specified announcement, if valid.

7. From the **Action** menu, select **Delete**.

AUX reason code names

This section provides information on working with AUX reason code names in the Dictionary. AUX reason codes enable a contact center to track an agent's time more precisely when the agent is in the AUX work mode. The agent can specify exactly why the AUX state is used, such as for lunch or meetings. You can view, add, delete, or change AUX reason code names by selecting **AUX Reason Codes** from the **Dictionary** menu.

Complete the **AUX Reason Codes** window if you want names associated with your AUX reason codes to appear in the AUX Reasons Code standard real-time and historical reports.

This section contains the following topics:

- <u>Permissions</u> on page 65
- <u>Before you begin</u> on page 66
- Adding an AUX reason code name on page 66
- <u>Viewing an AUX reason code name</u> on page 67
- Listing all AUX reason code names on page 67
- Modifying an AUX reason code name on page 68
- Deleting an AUX reason code on page 68

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view AUX reason codes, you need *read* permissions for the Dictionary subsystem.
- To add, delete, or modify AUX reason codes, you need *write* permissions for the Dictionary subsystem.

Before you begin

The following items should be read and understood before working with AUX reason code names in the Dictionary:

- To use AUX reason codes, your switch must have EAS.
- AUX reason codes are single digits, 0 through 9.
- AUX reason code names can be up to 20 characters long.
- AUX reason code 0 is used for cases in which the switch automatically puts an agent into AUX work mode. You can change this name.
- Names must be unique within an ACD. No two AUX reason codes in the same ACD can have the same name.
- If you make changes to the AUX reason code names you must restart any report that uses AUX reason codes to see the changes.

Adding an AUX reason code name

To add a name in the Dictionary for an AUX reason code:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **AUX Reason Codes**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the AUX Reason Codes reside.
- 4. Select OK.

Supervisor displays the Dictionary AUX Reason Codes window.

- 5. In the **AUX Reason Code name:** field, enter the name for the AUX reason code.
- 6. In the **AUX Reason Code:** field, enter the one-digit AUX reason code number, between 0 and 9.

Any additional information about the AUX reason code can be entered in the **Description**: field. Only 50 or fewer characters can be entered in this field.

7. From the Action menu, select Add.

Viewing an AUX reason code name

To view the name of an AUX reason code in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight AUX Reason Codes.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the AUX Reason Codes reside.
- 4. Select OK.

Supervisor displays the Dictionary AUX Reason Codes window.

- 5. To find an AUX reason code name to view, only one of the fields requires an AUX reason code to be specified. Perform one of the following actions to specify an existing AUX reason code in the Dictionary:
 - In the AUX Reason Code name: field, enter the name for the AUX reason code.
 - In the **AUX Reason Code:** field, enter the one-digit AUX reason code number, between 0 and 9.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified AUX reason code, if valid.

Listing all AUX reason code names

To list all AUX reason code names in the Dictionary for an ACD:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **AUX Reason Codes**.
- 3. In the **ACD**: field, enter the ACD or ACD Group on which the AUX Reason Codes reside.
- 4. Select OK.

Supervisor displays the Dictionary AUX Reason Codes window.

From the Actions menu, select List All.
 Supervisor displays the Dictionary AUX Reason Codes - List All window.

Modifying an AUX reason code name

To modify an AUX reason code name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight AUX Reason Codes.
- 3. In the ACD: field, enter the ACD or ACD Group on which the AUX reason codes reside.
- 4. Select OK.

Supervisor displays the Dictionary AUX Reason Codes window.

- 5. To find an AUX reason code name to modify, only one of the fields requires an AUX reason code name to be specified. Perform one of the following actions to specify an existing AUX reason code name in the Dictionary:
 - In the AUX Reason Code name: field, enter the name for the AUX reason code.
 - In the **AUX Reason Code:** field, enter the one-digit AUX reason code number, between 0 and 9.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified AUX reason code, if valid.

- 7. In the **AUX Reason Code name:** field, enter the new name for the AUX reason code.
- 8. From the Actions menu, select Modify.

Supervisor updates the name for the AUX reason code in the database.

Deleting an AUX reason code

To delete an AUX reason code name from the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **AUX Reason Codes**.
- 3. In the **ACD**: field, enter the ACD or ACD Group on which the AUX reason codes reside.
- 4. Select OK.

Supervisor displays the Dictionary AUX Reason Codes window.

5. To find an AUX reason code name to delete, only one of the fields requires an AUX reason code to be specified. Perform one of the following actions to specify an existing AUX reason code in the Dictionary:

- In the **AUX Reason Code name:** field, enter the name for the AUX reason code.
- In the AUX Reason Code: field, enter the one-digit AUX reason code number, between 0 and 9.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified AUX reason code, if valid.

7. From the Actions menu, select Delete.

Supervisor removes the specified AUX reason code from the Dictionary.

Calculations

Calculation names are abbreviated names for the calculations in the database that are used to create reports. You can view standard calculations or create your own custom calculations to use in custom reports. The names for calculations used in standard reports already exist in the Dictionary.

This section contains the following topics:

- Permissions on page 69
- Before you begin on page 70
- <u>Viewing a calculation</u> on page 70
- Listing all calculations on page 71
- <u>Adding a calculation</u> on page 71
- Modifying a custom calculation on page 72
- Deleting a custom calculation on page 73

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view calculations, you need *read* permissions for the Dictionary subsystem.
- To create, delete or modify a custom calculation, you need *write* permissions for the Dictionary subsystem.

Before you begin

The following items should be read and understood before changing calculations in the Dictionary:

- Calculations must be one word with no blanks.
- Reports will not run if you embed calculations more than three levels deep.
- Standard calculations cannot be deleted.

The standard CMS calculations are listed in the following documents:

- Avaya CMS Database Items and Calculations
- Avaya CMS Supervisor Report Designer User Guide
- Avaya CMS Supervisor Reports
- Avaya CMS Custom Reports
- It is recommended that you identify your own calculations in all lowercase letters to distinguish them from the standard *CMS* calculations, which are in all uppercase letters.
- If you delete a custom calculation from the Dictionary, any reports that it appeared in will not run.
- You can adversely affect standard reports if you change a standard *CMS* calculation. Reports will probably run, but the results may be different from those expected.
- Reports will not run if you create calculations that reference each other in a circular fashion. For example, assume that CALC_1 uses CALC_2 in its processing. If CALC_2 then uses CALC_1 in its processing, this creates a circular pattern where processing cannot be completed.

Viewing a calculation

To view a calculation in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Calculations**.
- 3. Select OK.

Supervisor displays the **Dictionary Calculations** window.

- 4. To find a calculation to view, only one of the fields requires a calculation to be specified. Perform one of the following actions to specify an existing database calculation in the Dictionary:
 - If you know the name of the calculation, enter it in the **Calculation name:** field.

- If you do not know the name of the calculation, perform the following steps to view all the calculations alphabetically:
 - 1. Leave all the fields in the **Dictionary Calculations** window blank, and from the **Actions** menu, select **Find One**.
 - 2. Use the **Next** or **Previous** buttons to move through the list of existing calculations.

Listing all calculations

To list all calculations in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations**: list, highlight **Calculations**.
- 3. Select OK.

Supervisor displays the Dictionary Calculations window.

4. From the Actions menu, select List All.

Adding a calculation

To add a calculation in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Calculations**.
- 3. Select OK.

Supervisor displays the Dictionary Calculations window.

4. Enter the name of the calculation in the **Calculation name:** field.

Use lowercase letters in the name to distinguish this custom calculations from a standard *CMS* calculation.

5. In the **Calculation:** field, enter the formula for the calculation.

Formulas can include:

- Database items
- Constants
- Calculations (the maximum nesting level is 3)

- The following arithmetic operators:
 - + (add)
 - - (subtract)
 - * (multiply)
 - / (divide)
 - () (do first, as in standard mathematical operations)

Any additional information about the calculation can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

6. From the Actions menu, select Add.

The custom calculation is added to the Dictionary.

Modifying a custom calculation

M Important:

Modifying a standard CMS calculation is not recommended. If you modify a standard CMS calculation, the meaning of that calculation is changed in every report in which it appears.

To modify a custom calculation:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the **Dictionary** window.

- 2. In the **Operations:** list, highlight **Calculations**.
- 3. Select OK.

Supervisor displays the Dictionary Calculations window.

- 4. Enter the name of the custom calculation in the Calculation name: field.
- 5. From the **Actions** menu, select **Find One**.
- 6. In the **Calculation:** field, enter the new formula.

Any changes to the descriptive information, can be entered in the **Description:** field.

7. From the Actions menu, select Modify.

Deleting a custom calculation

To delete a custom calculation:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Calculations**.
- 3. Select OK.

Supervisor displays the Dictionary Calculations window.

- 4. Enter the name of the custom calculation in the Calculation name: field.
- From the Actions menu, select Find One.
 Supervisor retrieves and displays the information for the specified calculation, if valid.
- From the Actions menu, select Delete.
 The specified calculation is removed from the Dictionary.

Call work codes

Call work codes are numeric sequences that are entered by agents to categorize the type of call that they have just received or are currently handling. By entering call work codes, agents can assign one of many defined categories to the calls which can be later viewed in detail through reports. The call work codes are defined in the Dictionary and can be used to represent any type of call in which there is an interest in tracking, such as complaints, special sales, promotional events, and so forth. Up to five call work codes can be assigned to each call. You can view, add, delete, or modify call work codes and their names from the **Call Work Codes** window. These names then appear in the standard Call Work Code historical report.

This section contains the following topics:

- <u>Permissions</u> on page 74
- <u>Before you begin</u> on page 74
- Adding a name to a call work code on page 74
- <u>Viewing a call work code name</u> on page 75
- Listing all call work code names on page 75
- Modifying a call work code name on page 76
- Deleting a call work code name on page 76

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view call work code names, you need *read* permissions for the Dictionary subsystem.
- To add, delete or modify call work code names, you need *write* permissions for the Dictionary subsystem.

Before you begin

The following items should be read and understood before changing call work codes in the Dictionary:

- Call work codes must be activated on the ACD before the administration and naming of them can be performed.
- Call work codes require storage space on the CMS file system. The number of call work codes available on a system must be configured through the Data Storage Allocation window. See <u>Chapter 10: Configuring CMS system settings</u> on page 289 for more information.
- Call Work Code 0 is reserved for unadministered work codes so that summary data can be collected. The default name for Call Work Code 0 is Unadministered codes, but this name can be modified.
- Even though call work codes can be up to 16 digits in length, a Dictionary name can only be assigned to a call work code that is 9 digits in length.

Adding a name to a call work code

To add a name to a call work code:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Call Work Codes**.
- 3. In the **ACD**: field, enter the ACD on which the call work code resides.
- 4. Select OK.

Supervisor displays the Dictionary Call Work Codes window.

- 5. In the **Call work code name:** field, enter the name of the of the new call work code.
- 6. In the **Call work code:** field, enter the number of the of the new call work code.

7. From the **Actions** menu, select **Add**.

The specified call work code and its associated name is added to the Dictionary.

Viewing a call work code name

To view the name assigned to a call work code in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Call Work Codes**.
- 3. In the **ACD**: field, enter the ACD on which the call work code resides.
- 4. Select OK.

Supervisor displays the Dictionary Call Work Codes window.

- 5. To find a call work code name to view, only one of the fields requires a call work code to be specified. Perform one of the following actions to specify an existing call work code in the Dictionary:
 - In the **Call work code name:** field, enter the name of the call work code.
 - In the Call work code: field, enter the number of the of the call work code.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified call work code, if valid.

Listing all call work code names

To list all call work code names in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Call Work Codes**.
- 3. In the **ACD**: field, enter the ACD on which the call work codes reside.
- 4. Select OK.

Supervisor displays the Dictionary Call Work Codes window.

5. From the Actions menu, select List All.

Modifying a call work code name

To modify a call work code name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Call Work Codes.
- 3. In the ACD: field, enter the ACD on which the call work code resides.
- 4. Select OK.

Supervisor displays the Dictionary Call Work Codes window.

- 5. To find a call work code name to modify, only one of the fields requires a call work code to be specified. Perform one of the following actions to specify an existing call work code in the Dictionary:
 - In the **Call work code name:** field, enter the name of the of the call work code.
 - In the **Call work code:** field, enter the number of the of the call work code.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified call work code, if valid.

- 7. In the Call work code name: field, enter the new name for the of the call work code.
- 8. From the Actions menu, select Modify.

The specified call work code entry is modified in the Dictionary.

Deleting a call work code name

To delete the name of a call work code in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Call Work Codes.
- 3. In the **ACD**: field, enter the ACD on which the call work code resides.
- 4. Select OK.

Supervisor displays the Dictionary Call Work Codes window.

- 5. To find a call work code name to delete, only one of the fields requires a call work code to be specified. Perform one of the following actions to specify an existing call work code in the Dictionary:
 - In the **Call work code name:** field, enter the name of the of the call work code.

- In the **Call work code:** field, enter the number of the of the call work code.
- From the Actions menu, select Find One.
 Supervisor retrieves and displays the information for the specified call work code, if valid.
- 7. From the **Actions** menu, select **Delete**.

The specified call work code is removed from the Dictionary.

Constants

Constants are items with fixed numerical values that you can enter into the Dictionary for use only in custom and designer reports. Constants do not exist in *CMS* when it is installed.

This section contains the following topics:

- <u>Permissions</u> on page 77
- Adding a constant on page 77
- Viewing a constant on page 78
- Listing all constants on page 78
- Modifying a constant on page 79
- <u>Deleting a constant</u> on page 79

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view a constant, you need *read* permissions for the Dictionary subsystem.
- To add, delete or modify a constant, you need *write* permissions for the Dictionary subsystem.

Adding a constant

To add a constant to the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Constants**.

3. Select **OK**.

Supervisor displays the Dictionary Constants window.

- 4. In the **Constant name:** field, enter the name of the new constant.
- 5. In the **Value:** field, enter the numerical value of the constant. The value can range from -99999 to 999999.

Any additional information about the constant can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

6. From the Actions menu, select Add.

Viewing a constant

To view a constant in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Constants**.
- 3. Select OK.

Supervisor displays the Dictionary Constants window.

- 4. To find a constant to view, only one of the fields requires an entry to be specified. Perform one of the following actions to specify an existing constant in the Dictionary:
 - In the **Constant name:** field, enter the name of the constant.
 - In the Value: field, enter the numerical value of the constant.
- 5. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified constant, if valid.

Listing all constants

To list all constants defined in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Constants**.
- 3. Select OK.

Supervisor displays the Dictionary Constants window.

4. From the Actions menu, select List All.

Modifying a constant

To modify a constant that is defined in the Dictionary:

1. From the Controller Window, select **Commands** > **Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Constants**.
- 3. Select OK.

Supervisor displays the Dictionary Constants window.

- 4. To find a constant to modify, only one of the fields requires an entry to be specified. Perform one of the following actions to specify an existing constant in the Dictionary:
 - In the **Constant name:** field, enter the name of the constant.
 - In the **Value:** field, enter the numerical value of the constant.
- 5. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified constant, if valid.

6. In the Value: field, enter the new numerical value for the constant.

Note:

You cannot modify the name of the new constant. If you want to change the name, you must delete the old constant and add a new one.

7. From the **Actions** menu, select **Modify**.

Deleting a constant

To delete a constant from the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Constants**.
- 3. Select OK.

Supervisor displays the Dictionary Constants window.

- 4. To find a constant to delete, only one of the fields requires an entry to be specified. Perform one of the following actions to specify an existing constant in the Dictionary:
 - In the **Constant name:** field, enter the name of the constant.
 - In the Value: field, enter the numerical value of the constant.

5. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified constant, if valid.

6. From the **Actions** menu, select **Delete**.

The specified constant is removed from the Dictionary.

Custom database items

You can define your own custom database items, which are stored in the *CMS* database. The custom database items are entered from the **Dictionary Custom Items** window, and allow you to combine your own data with the *CMS* data on custom or designer reports. You can also modify or delete custom database items.

This section contains the following topics:

- <u>Permissions</u> on page 80
- <u>Before you begin</u> on page 80
- <u>Adding a custom database item</u> on page 81
- <u>Viewing a custom database item</u> on page 81
- Listing all custom database items on page 81
- Modifying a custom database item on page 82
- <u>Deleting a custom database item</u> on page 82

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view a custom database item, you need *read* permissions for the Dictionary subsystem.
- To add, delete, or modify a custom database item, you need *write* permissions for the Dictionary subsystem.

Before you begin

The following items should be read and understood before working with custom database items in the Dictionary:

• You must first create the table in the database before you create a custom database item.

Adding a custom database item

To create a custom database item in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Custom Items**.
- 3. Select OK.

Supervisor displays the Dictionary Custom Items window.

4. In the **Database item:** field, enter the name of the new database item.

Any additional information about the custom database item can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

- 5. In the **Table:** field, enter the name of the table that will contain the new custom database item.
- 6. From the Actions menu, select Add.

Viewing a custom database item

To view a custom database item in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Custom Items**.
- 3. Select OK.

Supervisor displays the Dictionary Custom Items window.

- 4. In the **Database item:** field, enter the name of the custom database item.
- 5. From the **Actions** menu, select **Find One**.

Supervisor retrieves and displays the information for the specified custom database item, if valid.

Listing all custom database items

To list all custom database items in the Dictionary:

 From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Custom Items**.
- 3. Select OK.

Supervisor displays the Dictionary Custom Items window.

- 4. In the **Database item:** field, enter the name of the custom database item.
- 5. From the Actions menu, select List All.

Modifying a custom database item

To modify an existing custom database item in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Custom Items**.
- 3. Select OK.

Supervisor displays the Dictionary Custom Items window.

- 4. In the **Database item:** field, enter the new name for the custom database item.
- 5. In the **Table:** and **Description:** fields, enter the new information for the custom database item. Only 50 or fewer characters can be entered in the **Description:** field.

Note:

You cannot modify the name of a custom database item. You must delete the old item and add the new item if you want a different name.

6. From the Actions menu, select Modify.

The specified custom database item and its changes are saved to the Dictionary.

Deleting a custom database item

To delete a custom database item from the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Custom Items**.
- 3. Select OK.

Supervisor displays the Dictionary Custom Items window.

4. In the **Database item:** field, enter the name of the database item to delete.

5. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified custom database item, if valid.

6. From the **Actions** menu, select **Delete**.

The specified custom database item is removed from the Dictionary.

Generic string values synonyms

Modifying generic string values allows you to enter a replacement string for the default \mathbf{y} for YES and \mathbf{n} for NO values. The string values can be up to six characters in length. These modified string values appear in custom or designer reports that use the YES or NO synonyms.

This section contains the following topics:

- Permissions on page 83
- Viewing generic string values on page 83
- <u>Modifying generic string values</u> on page 84

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view generic string values, you need *read* permissions for the Dictionary subsystem.
- To modify generic string values, you need *write* permissions for the Dictionary subsystem.

Viewing generic string values

To view a generic string value from the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Generic String Values**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the generic string values reside.
- 4. Select OK.

Supervisor displays the Dictionary Generic String Values window.

Modifying generic string values

To modify an existing generic string value in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Generic String Values**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the generic string values reside.
- 4. Select OK.

Supervisor displays the Dictionary Generic String Values window.

- 5. In the **YES:** field, enter up to six characters.
- 6. In the NO: field, enter up to six characters.

The characters entered in the **YES**: and **NO**: fields will appear in reports that use YES and NO fields.

7. From the Actions menu, select Modify.

Location IDs

Location IDs represent the physical location or site where an agent sits or the port network to which a trunk is assigned. Location IDs can be named for ease of identification in reporting for multi-site environments. The same location IDs and their synonyms are used for both agents and trunks.

This section contains the following topics:

- <u>Permissions</u> on page 85
- Adding a location ID on page 85
- Viewing a location ID on page 85
- Listing all location IDs on page 86
- Modifying a location ID on page 86
- Deleting a Location ID on page 87

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the name of a location ID, you need *read* permissions for the Dictionary subsystem.
- To add, delete, or modify the name of a location ID, you need *write* permissions for the Dictionary subsystem.

Adding a location ID

To add a location ID to the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Location IDs**.
- 3. In the **ACD:** field, enter the ACD on which you want to add the location ID.
- 4. Select OK.

Supervisor displays the Dictionary Location IDs window.

- 5. In the **Location name:** field, enter the name of the new location.
- 6. In the Location ID: field, enter the number from 1 to 44 for the new location.

Any additional information about the location ID can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the Actions menu, select Add.

Viewing a location ID

To view the information associated with an existing location ID in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Location IDs**.
- 3. In the **ACD**: field, enter the ACD on which the location ID resides.
- 4. Select OK.

Supervisor displays the Dictionary Location IDs window.

- 5. To find a location ID to view, only one of the fields requires a value to be specified. Perform one of the following actions to specify a location ID in the Dictionary:
 - In the Location Name: field, enter the name of the location.
 - In the **Location ID:** field, enter the number of the location.
- 6. From the **Actions** menu, select **Find One**.

Supervisor retrieves and displays the information for the specified location ID, if valid.

Listing all location IDs

To list all location IDs defined in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Location IDs**.
- 3. In the **ACD:** field, enter the ACD on which the location IDs reside.
- 4. Select OK.

Supervisor displays the Dictionary Location IDs window.

5. From the Actions menu, select List All.

Modifying a location ID

To modify an existing location ID in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Location IDs**.
- 3. In the **ACD:** field, enter the ACD on which the location ID resides.
- 4. Select OK.

Supervisor displays the Dictionary Location IDs window.

- 5. To find a location ID to modify, only one of the fields requires a value to be specified. Perform one of the following actions to specify a location ID in the Dictionary:
 - In the Location Name: field, enter the name of the location.
 - In the Location ID: field, enter the number of the location.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified location ID, if valid.

- 7. In the **Location Name:** field, enter the new name for the location.
- 8. From the Actions menu, select Add.

Deleting a Location ID

To remove a location ID from the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Location IDs**.
- 3. In the **ACD:** field, enter the ACD on which the location ID resides.
- 4. Select OK.

Supervisor displays the Dictionary Location IDs window.

- 5. To find a location ID to delete, only one of the fields requires a value to be specified. Perform one of the following actions to specify a location ID in the Dictionary:
 - In the Location Name: field, enter the name of the location.
 - In the **Location ID:** field, enter the number of the location.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified location ID.

7. From the **Actions** menu, select **Delete**.

The specified location ID is removed from the Dictionary.

Login ID names

CMS uses agent login IDs to identify measured ACD agents. After an agent's name is assigned to a login ID, *CMS* windows and reports show that agent's login ID name instead of the login ID number.

You do not have to input agent names in the Dictionary, but *CMS* administration windows and reports are easier to understand with agent names instead of login IDs. Depending on the amount of space in the report, agent names can be truncated.

This section contains the following topics:

- Permissions on page 88
- Before you begin on page 88
- Adding a name to a login ID on page 88

- <u>Viewing a login ID name</u> on page 89
- Listing all login ID names on page 89
- Modifying a login ID name on page 90
- <u>Deleting a login ID name</u> on page 90

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view login IDs, you need *read* permissions for the Dictionary subsystem.
- To add, delete, or modify login IDs, you need *write* permissions for the Dictionary subsystem.

Before you begin

The following items should be read and understood before working with login ID names in the Dictionary:

- Login ID names are sorted alphabetically in the Dictionary based on the first character that you input in the Agent name: field.
 For example, if the agent is listed as Jane Brown, CMS sorts on the J for Jane. If the agent is listed as Brown, Jane CMS sorts on the B in Brown. Supervisor reports do not automatically sort by agent name, but the user can request the report to do so.
- You can assign no more than one agent name to the same login ID.
- You cannot assign the same agent name to multiple login IDs.
- You can use only numbers in login IDs.
- If you are viewing a real-time report when a change is made to a login ID that appears on that report, you must exit the report and rerun it to see the change.

Adding a name to a login ID

To add a name to a login ID in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Login Identifications**.

- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to assign a name to a login ID.
- 4. Select OK.

Supervisor displays the Dictionary Login Identifications window.

- 5. In the **Login ID:** field, enter the number of the login ID on which you want to assign a new name.
- 6. In the **Agent Name:** field, enter the name of the agent to be associated with the Login ID number.
- 7. From the **Actions** menu, select **Add**.

Viewing a login ID name

To view the information associated with an existing login ID name in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the **Dictionary** window.

- 2. In the **Operations:** list, highlight **Login Identifications**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to view a login ID name.
- 4. Select OK.

Supervisor displays the Dictionary Login Identifications window.

- 5. To find a login ID to view, only one of the fields requires a value to be specified. Perform one of the following actions to specify a login ID in the Dictionary:
 - In the Login ID: field, enter the number of the login ID.
 - In the **Agent Name:** field, enter the name of the agent.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified login ID, if valid.

Listing all login ID names

To list all login ID names defined in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Login Identifications**.

- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to list all login ID names.
- 4. Select OK.

Supervisor displays the Dictionary Login Identifications window.

5. From the Actions menu, select List All.

Modifying a login ID name

To modify an existing login ID name in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Login Identifications**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to modify a login ID name.
- 4. Select OK.

Supervisor displays the Dictionary Login Identifications window.

- 5. To find a login ID to modify, only one of the fields requires a value to be specified. Perform one of the following actions to specify a login ID in the Dictionary:
 - In the Login ID: field, enter the number of the login ID.
 - In the **Agent Name:** field, enter the name of the agent.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information associated with the specified login ID name, if valid.

- 7. In the Agent Name: field, enter the modified name of the agent.
- 8. From the Actions menu, select Modify.

The specified login ID name and its changes are saved in the Dictionary.

Deleting a login ID name

To delete an existing login ID name from the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Login Identifications**.

- 3. In the **ACD:** field, enter the ACD or ACD Group on which the login ID name to delete resides.
- 4. Select **OK**.

Supervisor displays the Dictionary Login Identifications window.

- 5. To find a login ID to delete, only one of the fields requires a value to be specified. Perform one of the following actions to specify a login ID in the Dictionary:
 - In the Login ID: field, enter the number of the login ID.
 - In the Agent Name: field, enter the name of the agent.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified login ID name, if valid.

7. From the Actions menu, select Delete.

Logout reason code names

Logout reason codes enable an agent to give the reason for logging out, such as attending training or the end of a shift. You can add, delete, modify, and view logout reason codes from the **Logout Reason Codes** window. The names that are assigned to the logout reason codes appear in the standard agent login/logout and agent trace historical reports.

This section contains the following topics:

- Permissions on page 91
- <u>Before you begin</u> on page 92
- Adding a logout reason code name on page 92
- Viewing a logout reason code name on page 92
- Listing all logout reason code names on page 93
- Modifying a logout reason code name on page 93
- Deleting a logout reason code name on page 94

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view logout reason codes, you need read permissions for the Dictionary subsystem.
- To add, delete, or modify logout reason code, you need *write* permissions for the Dictionary subsystem.

Before you begin

- Logout reason codes are single digits, 0 through 9. A zero is used when the system logs an agent out or if the agent does not specify a code.
- Logout reason code names can be up to 20 characters long.
- To use logout reason codes, your switch must have the Expert Agent Selection (EAS) feature.

Adding a logout reason code name

To add a logout reason code name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Logout Reason Codes.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to add a logout reason code.
- 4. Select OK.

Supervisor displays the Dictionary Logout Reason Codes window.

- 5. In the Logout Reason Code name: field, enter the name of the new logout reason code.
- 6. In the **Logout Reason Code:** field, enter a number from 0 to 9 to be associated with the logout reason code name.

Any additional information about the logout reason code can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the Actions menu, select Add.

Viewing a logout reason code name

To view an existing logout reason code name in the Dictionary:

1. From the Controller Window, select Commands > Dictionary.

Supervisor displays the **Dictionary** window.

- 2. In the **Operations:** list, highlight **Logout Reason Codes**.
- 3. In the **ACD**: field, enter the ACD or ACD Group on which you want to view a logout reason code name.

4. Select OK.

Supervisor displays the Dictionary Logout Reason Codes window.

- 5. To find a logout reason code to view, only one of the fields requires a value to be specified. Perform one of the following actions to specify a logout reason code in the Dictionary:
 - In the **Logout Reason Code name:** field, enter the name of the logout reason code.
 - In the Logout Reason Code: field, enter a number from 0 to 9 that is associated with the logout reason code.
- 6. From the **Actions** menu, select **Find One**.

Supervisor retrieves and displays the information for the specified logout reason code name, if valid.

Listing all logout reason code names

To list all existing logout reason code names in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Logout Reason Codes**.
- 3. In the **ACD**: field, enter the ACD or ACD Group on which you want to view all logout reason code names.
- 4. Select OK.

Supervisor displays the Dictionary Logout Reason Codes window.

5. From the Actions menu, select List All.

Supervisor displays the Dictionary Logout Reason Codes - List All window.

Modifying a logout reason code name

To modify an existing logout reason code name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Logout Reason Codes**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to modify a logout reason code name.
- 4. Select OK.

Supervisor displays the Dictionary Logout Reason Codes window.

- 5. To find a logout reason code to modify, only one of the fields requires a value to be specified. Perform one of the following actions to specify a logout reason code in the Dictionary:
 - In the Logout Reason Code name: field, enter the name of the logout reason code.
 - In the **Logout Reason Code:** field, enter the number from 0 to 9 that is associated with the logout reason code.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified logout reason code name, if valid.

- 7. In the **Logout Reason Code name:** field, enter the new name for the logout reason code.
- 8. From the Actions menu, select Modify.

The specified logout reason code name and its changes are saved to the Dictionary.

Deleting a logout reason code name

To delete an existing logout reason code name from the Dictionary:

1. From the Controller Window, select **Commands** > **Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Logout Reason Codes**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the logout reason code name to delete resides.
- 4. Select OK.

Supervisor displays the Dictionary Logout Reason Codes window.

- 5. To find a logout reason code to delete, only one of the fields requires a value to be specified. Perform one of the following actions to specify a logout reason code in the Dictionary:
 - In the **Logout Reason Code name:** field, enter the name of the logout reason code.
 - In the **Logout Reason Code:** field, enter the number from 0 to 9 that is associated with the logout reason code.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified logout reason code name, if valid.

7. From the Actions menu, select Delete.

The specified logout reason code name is removed from the Dictionary.

Split/skill string values

Split/skill string values are the descriptive words used in the split/skill call profile reports in place of the split/skill numeric values. From the **Split/Skill String Values** window, you can change the default string values to correspond with your own requirements.

This section contains the following topics:

- Permissions on page 95
- <u>Before you begin</u> on page 95
- <u>Viewing split/skill string values on page 95</u>
- Modifying split/skill string values on page 96
- <u>Split/skill string value field descriptions</u> on page 97

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view split/skill string values, you need *read* permissions for the Dictionary subsystem.
- To modify split/skill string values, you need *write* permissions for the Dictionary subsystem.

Before you begin

- If you assign values that are longer than the field lengths allowed on standard reports, those values are truncated to fit on the reports. Similar custom reports can be created to accommodate the longer string values.
- If you do not assign different values to the split/skill string values, the default values are used.

Viewing split/skill string values

To view the string value for splits or skills in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Split/Skill String Values.

- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to view the split/skill string values.
- 4. Select OK.

Supervisor displays the Dictionary Split/Skill String Values window.

Modifying split/skill string values

To modify the existing string values for splits or skills in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the **Dictionary** window.

- 2. In the **Operations:** list, highlight **Split/Skill String Values**.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to modify the split/skill string values.
- 4. Select OK.

Supervisor displays the Dictionary Split/Skill String Values window.

- Enter a new split/skill string value in each field that you want to modify.
 See Split/skill string value field descriptions on page 97 for more information.
- 6. From the **Actions** menu, select **Modify**.

The split/skill string values and their changes are saved to the Dictionary.

Split/skill string value field descriptions

The following table describes the fields in the **Dictionary Split/Skill String Values** window:

Field	Description			
Service Level Changed	The service level is the time limit in seconds for calls to wait in queue before being answered. The Split/Skill Call Profile reports can be used to see how many calls were either answered or abandoned within each service level increment.			
	The string values in the following fields are displayed on the Split/ Skill Call Profile Report:			
	• YES - The string value in this field will appear on the Split/Skill Call Profile Report if the service level in the split/skill call profile has changed.			
	• NO - The string value in this field will appear on the Split/Skill Call Profile Report if the service level in the split/skill call profile has not changed.			

Field	Description				
Period Changed	There are ten time increments of administrable length in the real-time and historical Split/Skill Call Profile Reports.				
	The string values in the following fields are displayed on the Split/ Skill Call Profile Report:				
	 YES - The string value in this field will appear on the Split/Skill Call Profile if the time period in the split/skill call profile has changed. NO - The string value in this field will appear on the Split/Skill Call Profile if the time period in the split/skill call profile has not 				
	changed.				
Skill State	Skill states are used to specify states for the different skills. The string values in the following fields represent the following skill states:				
	• UNKNOWN - Leave the default value. The default value is UNKN.				
	 NORMAL - Enter the descriptive word for the state of a skill using the Service Level Supervisor feature when it is below all overload thresholds. The default value is NORMAL. 				
	• OVERLOAD1 - Enter the descriptive word for the state of a skill using the Service Level Supervisor feature when it exceeds the first overload threshold. The default value is OVRLD1.				
	 OVERLOAD2 - Enter the descriptive word for the state of a skill using the Service Level Supervisor feature when it exceeds both the first and second thresholds. The default value is OVRLD2. 				
	• BEHIND - This string indicates that a split or skill is either close to or failing to meet the administered target service level and agents are not being auto-reserved to compensate for this situation. The default value for this string is BEHIND.				
	• AUTORSV - This string indicates that a split or skill is either close to or failing to meet the administered target service level and agents are currently being auto-reserved to achieve the necessary level. The default value for this string is AUTORSV.				

Split/Skill names

You can assign names to your ACD splits or skills. These split/skill names appear on the split/ skill reports, making your reports easier to identify and read.

Split/skill names should reflect the configuration of your splits/skills and ACDs.

For example, if you want splits in your system to be divided according to Sales, Customer Service, and Wholesale, assign those names to the splits that handle those areas of the business. If you want skills in your system to be divided by language such as French, Spanish, and German, assign those names to the skills that handle calls in those languages.

This section contains the following topics:

- <u>Permissions</u> on page 99
- Before you begin on page 99
- Adding a split/skill name on page 100
- <u>Viewing a split/skill name</u> on page 100
- Listing all the split/skill names on page 101
- Modifying a split/skill name on page 101
- Deleting a split/skill name on page 102

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the name assigned to a split/skill, you need *read* permissions for the Dictionary subsystem and for the split/skill.
- To add, delete or modify the name assigned to a split/skill, you need *write* permissions for the Dictionary subsystem and for the split/skill.

Before you begin

The following items should be read and understood before working with split/skill names in the Dictionary:

- It is advised that you be consistent with the names given by your switch administrator.
- If you assign a name, the split/skill number no longer appears in split/skill reports or windows. The split/skill name appears instead.
- If you make changes to split/skill names when viewing a report that includes those splits/ skills, you must exit the report and rerun it to see the changes.

Adding a split/skill name

To add a name for a split or skill in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Splits/Skills.
- 3. In the ACD: field, enter the ACD or ACD Group on which you want to name a split/skill.
- 4. Select OK.

Supervisor displays the Dictionary Splits/Skills window.

- 5. In the **Split/Skill name:** field, enter the name of the split/skill.
- 6. In the Split/Skill number: field, enter the number of the split/skill.

Any additional information about the split/skill can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the **Actions** menu, select **Add**.

Viewing a split/skill name

To view an existing name for a split or skill in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Splits/Skills.
- 3. In the ACD: field, enter the ACD or ACD Group on which you want to view a split/skill.
- 4. Select OK.

Supervisor displays the Dictionary Splits/Skills window.

- 5. To find a split/skill to view, only one of the fields requires a split/skill to be specified. Perform one of the following actions to specify an existing split/skill in the Dictionary:
 - In the Split/Skill name: field, enter the name of the split/skill.
 - In the Split/Skill number: field, enter the number of the split/skill.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified split/skill name, if valid.

Listing all the split/skill names

To list the names for all splits or skills in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Splits/Skills.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to view all split/skill names.
- 4. Select OK.

Supervisor displays the Dictionary Splits/Skills window.

5. From the **Actions** menu, select **List All**.

Modifying a split/skill name

To modify an existing name for a split or skill in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Splits/Skills.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which you want to modify the split/skill name.
- 4. Select OK.

Supervisor displays the Dictionary Splits/Skills window.

- 5. To find a split/skill to modify, only one of the fields requires a split/skill to be specified. Perform one of the following actions to specify an existing split/skill in the Dictionary:
 - In the **Split/Skill name:** field, enter the name of the split/skill.
 - In the Split/Skill number: field, enter the number of the split/skill.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified split/skill name, if valid.

- 7. In the Split/Skill name: field, enter the new name of the split/skill.
- 8. From the Actions menu, select Modify.

The split/skill name and its changes are saved to the Dictionary.

Deleting a split/skill name

To delete the name for a split or skill in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Splits/Skills.
- 3. In the **ACD:** field, enter the ACD or ACD Group on which the split/skill name to delete resides.
- 4. Select OK.

Supervisor displays the Dictionary Splits/Skills window.

- 5. To find a split/skill to delete, only one of the fields requires a split/skill to be specified. Perform one of the following actions to specify an existing split/skill in the Dictionary:
 - In the Split/Skill name: field, enter the name of the split/skill.
 - In the Split/Skill number: field, enter the number of the split/skill.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified split/skill name, if valid.

7. From the Actions menu, select Delete.

The split/skill name is removed from the Dictionary.

Standard database items

Standard database items store ACD data and are used by CMS in its default reports.

You cannot change or delete standard database items because this is a *read-only* section of the Dictionary. You can view the standard information about each database item, the description for that item, and the tables in which the item appears.

The following example shows a current real-time agent table with standard *CMS* database item column headings:

Extension	Split	Logid	Logon start	Work mode	Started	Direction	Changed	>*
1000	1	4000	8:00	AVAIL	8:00	NULL	8:00	~
1001	1	5966	7:58	ACD	8:04	IN	8:04	>

1002	1	2200	7:59	ACD	8:03	IN	8:03	>
		-						>

Note:

>* indicates that more database item column headings follow. A dot (.) indicates that more data follows down the table.

This section contains the following topics:

- Permissions on page 103
- <u>Viewing a standard database item on page 103</u>
- <u>Viewing all standard database items alphabetically</u> on page 104

Permissions

To view the standard database items, you need *read* permissions for the Dictionary subsystem.

Viewing a standard database item

To view a standard database item in the Dictionary:

1. From the Controller Window, select **Commands** > **Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the Operations: list, highlight Standard CMS Items.
- 3. Select OK.

Supervisor displays the Dictionary Standard CMS Items window.

4. In the **Database item:** field, enter the name of the database item entirely in uppercase letters.

If you do not know the entire database item name, enter part of the database item name along with an asterisk (*) to find the item. You can use pattern searching in any field in the window.

You can also enter information in the **Table:** field to limit the search of a database item to a single table.

5. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified standard database item, if valid.

Note:

If you used pattern matching in your search for a standard database item, it is possible that more than one match was found. To view the next database item that matches the search parameter, select **Next** from the **Actions** menu. Continue to select **Next** until the appropriate database item is found.

Viewing all standard database items alphabetically

To view all standard database items in the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the Operations: list, highlight Standard CMS Items.
- 3. Select OK.

Supervisor displays the Dictionary Standard CMS Items window.

4. From the Actions menu, select List All.

Trunk group names

The **Trunk Groups** window is used to assign names to ACD trunk groups. The trunk groups names appear in reports making the reports easier to understand.

This section contains the following topics:

- <u>Permissions</u> on page 105
- <u>Before you begin</u> on page 105
- Adding a trunk group name on page 105
- Viewing a trunk group name on page 106
- Listing all trunk group names on page 106
- Modifying a trunk group name on page 106
- <u>Deleting a trunk group name</u> on page 107

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the name that is assigned to a trunk group, you need *read* permissions for the Dictionary subsystem and for the trunk group.
- To add, delete, or modify the name assigned to a trunk group, you need *write* permissions for the Dictionary subsystem and for the trunk group.

Before you begin

The following items should be read and understood before working with trunk groups names in the Dictionary:

- When naming trunk groups, you may want to be consistent with the names given to trunk groups and splits/skills by your switch administrator.
- If you assign a trunk group name, the name is displayed on trunk group reports or windows instead of the trunk group number.
- If you make changes to trunk group names while viewing a report that includes those trunk groups, you must exit the report and rerun it to see the changes.

Adding a trunk group name

To add a trunk group name to the Dictionary:

1. From the Controller Window, select **Commands** > **Dictionary**.

Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Trunk Groups**.
- 3. In the **ACD:** field, enter the ACD on which you want to name a trunk group.
- 4. Select OK.

Supervisor displays The Dictionary Trunk Groups window.

- 5. In the **Trunk group name:** field, enter the name of the trunk group.
- 6. In the **Trunk group number:** field, enter the number of the trunk group.

Any additional information about the trunk group can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the Actions menu, select Add.

Viewing a trunk group name

To view an existing trunk group name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Trunk Groups.
- 3. In the **ACD**: field, enter the ACD on which you want to view a trunk group name.
- 4. Select OK.

Supervisor displays the Dictionary Trunk Groups window.

- 5. To find a trunk group to view, only one of the fields requires a trunk group to be specified. Perform one of the following actions to specify an existing trunk group in the Dictionary:
 - In the Trunk group name: field, enter the name of the trunk group.
 - In the **Trunk group number:** field, enter the number of the trunk group.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified trunk group, if valid.

Listing all trunk group names

To list all trunk group names in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the Operations: list, highlight Trunk Groups.
- 3. In the **ACD:** field, enter the ACD on which you want to list all trunk group names.
- 4. Select OK.

Supervisor displays the Dictionary Trunk Groups window.

5. From the Actions menu, select List All.

Modifying a trunk group name

To change the name or description of a trunk group in the Dictionary:

 From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.

- 2. In the **Operations:** list, highlight **Trunk Groups**.
- 3. In the **ACD**: field, enter the ACD on which you want to modify a trunk group name.
- 4. Select OK.

Supervisor displays the Dictionary Trunk Groups window.

- 5. To find a trunk group to modify, only one of the fields requires a trunk group to be specified. Perform one of the following actions to specify an existing trunk group in the Dictionary:
 - In the **Trunk group name:** field, enter the name of the trunk group.
 - In the **Trunk group number:** field, enter the number of the trunk group.
- 6. From the **Actions** menu, select **Find One**.

Supervisor retrieves and displays the information for the specified trunk group, if valid.

- 7. In the **Trunk group name:** or **Description** field, make the necessary changes for the trunk group.
- 8. From the Actions menu, select Modify.

Deleting a trunk group name

To remove a name for a trunk group from the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Trunk Groups**.
- 3. In the **ACD**: field, enter the ACD on which the trunk group to delete resides.
- 4. Select **OK**.

Supervisor displays the Dictionary Trunk Groups window.

- 5. To find a trunk group to delete, only one of the fields requires a trunk group to be specified. Perform one of the following actions to specify an existing trunk group in the Dictionary:
 - In the Trunk group name: field, enter the name of the trunk group.
 - In the **Trunk group number:** field, enter the number of the trunk group.
- 6. From the Actions menu, select Delete.

The selected trunk group name is removed from the Dictionary.

Trunk string values

Trunk string values are the descriptive words such as IDLE, HOLD, or QUEUED on trunk reports. These words are displayed in the data fields of the report. They are not displayed as headings. From the **Trunk String Values** window, the default values can be changed to any values that meet the needs of your contact center. If you do not assign different trunk string values, the default values are used. Any changes that you make to the trunk string values affect what you see in the corresponding fields on trunk reports.

This section contains the following topics:

- Permissions on page 108
- Viewing and modifying trunk string values on page 108
- Trunk string values field descriptions on page 109

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the trunk string values, you need read permissions for the Dictionary subsystem.
- To modify a trunk string value, you need write permissions for the Dictionary subsystem.

Viewing and modifying trunk string values

To view and modify trunk string values in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Trunk String Values**.
- 3. Select OK.

Supervisor displays the Dictionary Trunk String Values window.

4. To change any of the default names, enter the new descriptive word in the text box that is next to the name that you want to change.

See <u>Trunk string values field descriptions</u> on page 109 for more information on the fields in the **Dictionary Trunk String Values** window.

5. From the **Actions** menu, select **Modify** when the necessary changes have been completed.

Trunk string values field descriptions

The following table describes the trunk string value fields:

Field	Description
Trunk State	 To change any of the trunk state default names, enter the new descriptive word next to any of the following: IDLE - The trunk is waiting for a call. SEIZED - A call is holding the trunk, either incoming or outgoing. QUEUED - An ACD call has seized the trunk, is queued to a split/ skill, and is waiting for an agent to become available. CONN - The caller and an agent are connected on a call. DABN - The caller has abandoned the call. FBUSY - The caller receives a forced busy signal. FDISC - The caller receives a forced disconnect. HOLD - The agent has put the caller on hold. MBUSY - The trunk is out of service for maintenance purposes. RINGING - The call is ringing at an agent's voice terminal. UNKNOWN - CMS does not recognize the trunk state.
Queue Type	 To change the queue type default names, enter the new descriptive name next to MAIN or BACKUP. The name entered here is displayed instead of the default value in real-time reports containing the trunk QUETYPE database item. (Standard reports do not contain this item). MAIN - The call is queued to a split/skill as a result of a queue to main split/skill vector command. BACKUP - The call is queued to a split/skill as a result of a vector command other than queue to main split/skill.
Call Priority (Non-Vectoring)	 To change the call priority (non-vectoring) default names, enter the new descriptive name next to YES or NO. The name entered here is displayed instead of the default name in real-time reports containing the trunk PRIORITY database item. (Standard reports do not contain this item.) YES - The call occupying the trunk has priority entering the trunk. NO - The call occupying the trunk does not have priority entering the split.

Field	Description	
Call Priority (Vectoring)	 To change the call priority (vectoring) default names, enter the new descriptive name next to LOW, MED, HIGH, or TOP. The priority level at which calls on a trunk queue to a split/skill is specified using either the queue to split/skill or check split/skill command in the vector that is processing the call. The name entered here is displayed instead of the default name in real-time reports containing the trunk PRIORITY database item. (Standard reports do not contain this item). LOW - The call occupying the trunk is queued to a split or skill at the lowest priority level. MED - The call occupying the trunk is queued to a split or skill at the second lowest priority level. HIGH - The call occupying the trunk is queued to a split or skill at the second highest priority level. TOP - The call occupying the trunk is queued to a split or skill at the second highest priority level. 	
	the highest priority level.	
Call Direction	 To change the call-direction default names, enter the new descriptive word next to IN or OUT. IN - The trunk is on an incoming call. OUT - The trunk is on an outbound call. 	
All Trunks Busy	 To change the all trunks busy default names, enter the new descriptive word next to YES or NO. YES - All trunks in the trunk group are busy (in use or maintenance). NO - Not all trunks in the trunk group are busy. 	

VDN names

From the **VDNs** window, you can assign names to VDNs so that names instead of numbers appear on VDN reports and VDN administration windows. VDN names should reflect the configuration of your ACD and convey one or more of the following:

- The VDN's purpose; for example, sales or customer service.
- The VDN destination vector; for example, FBusy-Nat.Accts.
- The trunk groups assigned to the VDN; for example, WATS 800-331-1111.

This section contains the following procedures:

- Permissions on page 111
- <u>Before you begin</u> on page 111

- Adding a VDN name on page 112
- <u>Viewing a VDN name</u> on page 112
- Listing all VDN names on page 113
- Modifying a VDN name on page 113
- Deleting a VDN name on page 114

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the name that is assigned to a VDN, you need *read* permissions for the Dictionary subsystem and for the VDN.
- To add, delete, or modify the name that is assigned to a VDN, you need *write* permissions for the Dictionary subsystem and for the VDN.

Before you begin

The following items should be read and understood before working with VDN names in the Dictionary:

- The **VDNs** window is available only if the Call Vectoring feature is installed and activated on your switch.
- VDNs must be created on the switch and assigned for measurement via CMS.
- To get a list of VDNs that can be named, run the vector configuration report. While all VDNs can be named, it is recommended that only those VDNs that are used are then named instead of all of the VDNs. This will conserve system resources.
- If you make changes to the VDN names when a report that includes those VDNs is running, you must exit the report and rerun it to see the changes.
- When naming VDNs, you may want to be consistent with the names given to VDNs by your switch administrator.
- If a name is assigned to a VDN, it will appear on VDN reports and windows instead of the VDN number.

Adding a VDN name

To add a name for a VDN in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **VDNs**.
- 3. In the ACD: field, enter the ACD on which you want to name a VDN.
- 4. Select OK.

Supervisor displays the Dictionary VDNs window.

- 5. In the **VDN name:** field, enter the name of the VDN.
- 6. In the **VDN**: field, enter the number of the VDN.

Any additional information about the VDN, can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the Actions menu, select Add.

Viewing a VDN name

To view an existing VDN name in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **VDNs**.
- 3. In the **ACD**: field, enter the ACD on which you want to view a VDN.
- 4. Select OK.

Supervisor displays the Dictionary VDNs window.

- 5. To find a VDN name to view, only one of the fields requires a VDN to be specified. Perform one of the following actions to specify an existing VDN in the Dictionary:
 - In the VDN name: field, enter the name of the VDN.
 - In the **VDN:** field, enter the number of the VDN.
- 6. From the **Actions** menu, select **Find One**.

Supervisor retrieves and displays the information for the specified VDN name, if valid.

Listing all VDN names

To list all defined VDN names in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **VDNs**.
- 3. In the **ACD:** field, enter the ACD on which you want to view all the VDNs.
- 4. Select OK.

Supervisor displays the Dictionary VDNs window.

5. From the Actions menu, select List All.

Modifying a VDN name

To modify the name or description of an existing VDN in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **VDNs**.
- 3. In the **ACD**: field, enter the ACD on which you want to modify the name of a VDN.
- 4. Select OK.

Supervisor displays the Dictionary VDNs window.

- 5. To find a VDN name to modify, only one of the fields requires a VDN to be specified. Perform one of the following actions to specify an existing VDN in the Dictionary:
 - In the VDN name: field, enter the name of the VDN.
 - In the **VDN:** field, enter the number of the VDN.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified VDN name, if valid.

- 7. In the **VDN name:** or **Description:** field, make the necessary changes.
- 8. From the Actions menu, select Modify.

Deleting a VDN name

To delete the name of a VDN from the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **VDNs**.
- 3. In the ACD: field, enter the ACD on which the VDN to delete resides.
- 4. Select **OK**.

Supervisor displays the Dictionary VDNs window.

- 5. To find a VDN name to delete, only one of the fields requires a VDN to be specified. Perform one of the following actions to specify an existing VDN in the Dictionary:
 - In the **VDN name:** field, enter the name of the VDN.
 - In the VDN: field, enter the number of the VDN.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified VDN, if valid.

7. From the Actions menu, select Delete.

The name and description for this VDN is removed from the Dictionary.

Vector names

From the **Vectors** window, you can assign names to vectors so that the names instead of the vector numbers are displayed on vector reports and administration windows. Vector names should reflect the configuration of your ACD and convey one or more of the following:

- The vector's purpose; for example, sales or customer service.
- The VDNs assigned to the vector; for example, vdn2001, vdn3001, and vdn4001.
- The splits or skills to which the vector sends calls; for example, sales1, sales2, AUDIX system.

This section contains the following topics:

- Permissions on page 115
- Before you begin on page 115
- Adding a vector name on page 115
- Viewing a vector name on page 116

- Listing all vector names on page 116
- Modifying a vector name on page 117
- Deleting a vector name on page 117

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the name that is assigned to a vector, you need *read* permissions for the Dictionary subsystem and for the vector.
- To add, delete, or modify the name that is assigned to a vector, you need *write* permissions for the Dictionary subsystem and for the vector.

Before you begin

The following items should be read and understood before working with vector names in the Dictionary:

- The **Vectors** window is available only if the Call Vectoring feature is installed and activated on the switch.
- You can assign a name to a vector even if the steps to the vector have not been assigned.
- The number of available vectors depends on the switch type.
- If a name is assigned to a vector, it appears on reports and windows instead of the vector number.
- If you make changes to vector names when a report that includes those vectors is running, you must exit the report and rerun it to see the changes.

Adding a vector name

To add a name for a vector in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Vectors**.
- 3. In the ACD: field, enter the ACD on which you want to name a vector.
- 4. Select OK.

Supervisor displays the Dictionary Vectors window.

- 5. In the Vector name: field, enter the name of the vector.
- 6. In the Vector number: field, enter the number of the vector.

Any additional information about the vector, can be entered in the **Description:** field. Only 50 or fewer characters can be entered in this field.

7. From the **Actions** menu, select **Add**.

Viewing a vector name

To view an existing name for a vector in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Vectors**.
- 3. In the ACD: field, enter the ACD on which you want to view a vector name.
- 4. Select OK.

Supervisor displays the Dictionary Vectors window.

- 5. To find a vector name to view, only one of the fields requires a vector to be specified. Perform one of the following actions to specify an existing vector in the Dictionary:
 - In the **Vector name:** field, enter the name of the vector.
 - In the **Vector number:** field, enter the number of the vector.
- 6. From the Actions menu, select Find One.

Supervisor retrieves and displays the information for the specified vector, if valid.

Listing all vector names

To list all vector names defined in the Dictionary:

- From the Controller Window, select Commands > Dictionary. Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Vectors**.
- 3. In the **ACD**: field, enter the ACD on which you want to list all vector names.
- 4. Select OK.

Supervisor displays the Dictionary Vectors window.

5. From the Actions menu, select List All.

Modifying a vector name

To change the current name or description of a vector in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Vectors**.
- 3. In the **ACD:** field, enter the ACD on which you want to modify a vector name.
- 4. Select OK.

Supervisor displays the Dictionary Vectors window.

- 5. To find a vector name to modify, only one of the fields requires a vector to be specified. Perform one of the following actions to specify an existing vector in the Dictionary:
 - In the Vector name: field, enter the name of the vector.
 - In the Vector number: field, enter the number of the vector.
- From the Actions menu, select Find One.
 Supervisor retrieves and displays the information for the specified vector, if valid.
- 7. In the **Vector name:** or **Description:** field, make the necessary changes.
- 8. From the Actions menu, select Modify.

Deleting a vector name

To remove the name for a vector in the Dictionary:

- From the Controller Window, select Commands > Dictionary.
 Supervisor displays the Dictionary window.
- 2. In the **Operations:** list, highlight **Vectors**.
- 3. In the ACD: field, enter the ACD on which the vector name to delete resides.
- 4. Select OK.

Supervisor displays the Dictionary Vectors window.

- 5. To find a vector name to delete, only one of the fields requires a vector to be specified. Perform one of the following actions to specify an existing vector in the Dictionary:
 - In the Vector name: field, enter the name of the vector.
 - In the **Vector number:** field, enter the number of the vector.

- From the Actions menu, select Find One.
 Supervisor retrieves and displays the information for the specified vector, if valid.
- From the Actions menu, select Delete.
 The name for this VDN is removed from the Dictionary.

Dictionary reports

In the **Dictionary** window, use the **Reports** tab to generate reports on most sections of the Dictionary. These reports can be printed, sent to a file, or displayed on the screen.

This section contains the following topics:

- Permissions on page 118
- <u>Types of Dictionary reports</u> on page 118
- <u>Printing Dictionary reports</u> on page 120
- Running an agent group members report on page 121

Permissions

To obtain a report, you need to read the permissions for the Dictionary subsystem.

Types of Dictionary reports

This section provides a description of each of the Dictionary reports.

Dictionary ACDs Report

This report gives you a report of the ACD names you have assigned in the **Dictionary ACDs Operation** input window and the corresponding ACD number.

Dictionary Agent Groups Report

You can generate reports of the groups(s) you created using the **Dictionary Agent Groups Operation** input window.

Dictionary Call Work Codes Report

The names you add in the **Dictionary Call Work Codes Operation** input window are displayed on the **Dictionary Call Work Codes** report.

Dictionary Custom Items Report

This report gives you a report of all the custom items in the database on the Avaya CMS server.

Dictionary Login Identifications Report

This report gives you a report of the names of agents that you have assigned to Login IDs in the **Dictionary Login IDs Operation** input window. If you assign names to the login IDs, agent names appear on all reports. However, if you make any additions or changes to login IDs, the changes do not appear on any real-time report that is currently running. You must exit the report and rerun it to see the new agent names.

Dictionary Splits/Skills Report

This report provides the names that have been assigned to splits or skills using the **Dictionary Splits/Skills Operation** input window. When you assign a split or skill name, that name appears on all split/skill windows and real-time and historical split/skill reports. However, if you make any additions or changes to split or skill names, the changes do not appear on any real-time report that is currently running. You must exit the report and rerun it to see the new split or skill names.

Dictionary Standard CMS Items Report

This report provides a list of all the Standard CMS database items on the Avaya CMS server.

Dictionary Trunk Groups Report

This report provides the names that have been assigned to trunk groups using the **Dictionary Trunk Groups Operation** input window. When you assign a trunk group name, that name appears on all trunk group windows and real-time and historical reports. If you make any additions or changes to trunk group names, the changes do not appear on any real-time report that is currently running. You must exit the report and rerun it to see the new trunk group names.

Dictionary VDNs Report

A Important:

If you have not purchased the Vectoring feature, this window is not available.

This report provides the names that have been assigned to VDNs in the **Dictionary VDNs Operation** input window. When you assign a VDN name, that name appears on all real-time and historical reports that include that VDN. However, if you make any changes to VDN names, the changes do not appear on any real-time report that is currently running. You must exit the report and rerun it to see the new VDN names.

Dictionary Vectors Report

Important:

If you have not purchased the Vectoring feature, this window is not available.

This report provides the names that have been assigned to vectors in the **Dictionary Vectors Operation** input window. When you assign a vector name, that name appears on all real-time and historical reports that include that vector. However, if you make any additions or changes to the vector names, the changes do not appear on any real-time report that is currently running. You must exit the report and rerun it to see the new vector names.

Printing Dictionary reports

To print Dictionary reports:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the **Dictionary** window.

2. Select the **Reports** tab.

Supervisor displays the Reports window.

- 3. In the **Reports** list, select the Dictionary item on which you want to generate a report.
- 4. Select OK.

Supervisor displays a report window.

- 5. Select one of the following options:
 - View Reports on Screen
 - Print Report on:

To send the report to a printer other than the default printer in the report window, select **Print Report on:** and then select the printer button on the right side of the report window. Select the new printer from the **Print** window.

6. Select OK.

Depending on the option that you selected, the report is either sent to a printer or displayed on the screen.

The following is an example of screen output:

Running an agent group members report

As an example, the following procedure describes the steps used to run an agent group members report from the Dictionary:

1. From the Controller Window, select **Commands > Dictionary**.

Supervisor displays the **Dictionary** window.

2. Select the **Reports** tab.

Supervisor displays the **Reports** window.

- 3. In the **Reports** list, select **Agent Group Members**.
- 4. Select OK.

Supervisor displays the Dictionary Agent Groups window.

- 5. In the **Agent group name:** field, enter the name of the agent group, and then press the **Enter** key.
- 6. Select one of the following options:
 - View Reports on Screen
 - Print Report on
- 7. Select OK.

Depending on the option that you selected, the report is either sent to a printer or displayed on the screen.

Chapter 3: Using the Dictionary to name contact center entities

Chapter 4: Using reports

This section describes *Supervisor* reports and provides procedures in generating and administering them. The procedures are general in scope so as to provide usability for all reports run through the Reports subsystem. For more information on specific reports and usage, see the *Avaya CMS Supervisor Installation and Getting Started* and *Avaya CMS Supervisor Reports* manuals.

CMS collects data from ACD activity and stores it in one of the *CMS* databases. The data reflects the activity of your contact center and can be viewed through *CMS* reports that cover such areas as:

- Splits/Skills
- Trunks
- Trunk Groups
- Agents
- Agent Groups
- VDNs
- Vectors

This section contains the following topics:

- <u>Background</u> on page 123
- Choosing a report on page 125
- Generating a report on page 126
- Printing a report on page 127
- Printing a Historical report on page 127
- <u>Changing the print setup</u> on page 128
- <u>Restarting a report</u> on page 128

Background

Reports consist of standard reports, custom reports, and designer reports. Standard reports are shipped as part of the *CMS* system. Custom reports are created by contact center administrators through the *CMS* ASCII interface. Designer Reports are created through *Supervisor*.

See the Avaya CMS Custom Reports and Avaya CMS Supervisor Report Designer User Guide manuals for more information on creating custom and designer reports.

This section includes the following topics:

- Interfaces for reports on page 124
- <u>Types of reports</u> on page 124
- What reports summarize on page 125

Interfaces for reports

The following list displays which interfaces are used in the creation of reports and which ones can be used for viewing these reports:

- Most standard reports can also be viewed through the *CMS* ASCII interface. The exceptions to this are the *Supervisor* integrated reports, reports containing charts, and others.
- Custom reports are created through the CMS ASCII interface, but can be viewed through both the CMS ASCII interface and Supervisor.
- Designer reports can only be created and viewed through *Supervisor*.

Types of reports

The following types of reports can be generated:

- Standard real-time
- Standard historical
- Standard integrated
- Custom (CMS) real-time
- Custom (CMS) historical
- Designer (Supervisor) real-time
- Designer (Supervisor) historical
- Designer (*Supervisor*) integrated
- Exceptions
- Forecast (available as an add-on feature)

What reports summarize

Use *CMS/Supervisor* reports to summarize the status of:

- Any measured subset of the ACD, including agents, splits/skills, trunks/trunk groups, VDNs, vectors, call work codes, and call records
- Agent administration
- Contact center administration
- Dictionary
- Exceptions
- Maintenance

Choosing a report

Most reports are found in the **Reports** subsystem found under the **Commands** item on the menu bar. This section provides the general procedure for running reports in this subsystem. Reports may be run by selecting the **Real-Time**, **Historical**, or **Integrated** tab from the **Select a Report** window.

Other reports are available on the **Reports** tab found on the main window of the following subsystems:

- Dictionary
- Exceptions
- Agent Administration
- Call Center Administration
- Maintenance

The reports for the subsystems listed above are not available in the main Reports interface.

Procedures on running reports through the areas other than the **Reports** subsystem are covered in their respective sections. The following procedures provide information on working with reports from the **Reports** subsystem.

Steps

To run a report from the **Reports** system.

1. Select **Commands** > **Reports** from the Controller Window.

Supervisor displays the Select a Report window.

- 2. Determine the type of report to be run by select the appropriate tab: **Real-Time**, **Historical**, or **Integrated**.
- 3. From the **Run Report for ACD:** field, select the ACD to serve as the data source for the report.
- 4. Select a category from the **Category** field.
- 5. Select a report from the **Report** field.
- 6. For historical interval reports, select a time zone from the Time Zone field. You can select from a series of available time zones. The value "default" denotes the time zone of the ACD.
- 7. Select OK.

Supervisor displays a report input window similar to the example below. The input fields vary according to the report and its type.

To continue this process, see the following section, <u>Generating a report</u> on page 126.

Generating a report

Once a report type has been selected by following the previous procedure, information must be entered to define the parameters of the report.

- 1. To specify an object for the report, such as an agent, vector, VDN, and so forth, perform one of the following actions:
 - Manually enter the name or number of the object for the report.
 - Select the Browse button to view available objects.
 - Select the **History** list to select an input used previously.
- 2. Select **OK** to run the report with the specified object.

The type of report selected is displayed with information related to the object that was specified.

Note:

In the new CMS systems, a time value, administrable by the customer, has been introduced for limiting the time the historical database spends on a report query. See section <u>Administering Report Properties</u> on page 398 for more information on this topic.

Printing a report

Once a report has been generated, a Real-Time or Integrated report can be printed. To print a Real-time or Integrated report:

1. Select **Reports > Print** from the menu bar of the report window.

Windows displays the **Print** window opens.

- 2. Select the printer and options for this report:
 - Select the printer destination by selecting a printer in the Name drop-down list box.
 - Select the number of copies of this report to be printed in the **Number of copies** field.
 - Use the **Properties** button to change options specific to the selected printer. This could include image resolution, orientation, and other options.
- 3. Select OK.

The report is printed based on the options selected.

To print a report to a file on the local system, place a check mark in the **Print to file** check box. Set the printer to *Generic/Text Printer*. Failing to select the *Generic/Text Printer* will cause the **Print to file** check box to be ignored and the report is sent to the selected printer.

Printing a Historical report

Once a report has been generated, a Historical report can be printed using two different methods:

- 1. Follow the steps listed in <u>Generating a report</u> on page 126 and <u>Printing a report</u> on page 127.
- 2. When specifying an object, such as an agent, vector, VDN, and so forth, for a report, the **Destination** group of controls can be seen on the lower half of the dialog box. This allows the report to be viewed on the screen or sent to the printer specified. Selecting the printer button in this area will allows specification of a different printer as well as setting all printer and print job options. This button is not available on Real-time and Integrated reports.

Changing the print setup

Once a report has been printed to the screen, the settings for margins, page numbering, and table borders can be altered. To change the current print setup:

1. Select **Reports > Page Setup** from the report window menu bar.

Supervisor displays the Page Setup dialog box.

- 2. Select the settings for page margins, page numbers, and table borders, as needed.
- 3. Select **OK** to save these settings. The new settings will be applied to the next report that is printed.

Restarting a report

A Important:

Work-state drill-down reports cannot be restarted.

To restart a report once it is running on the screen, perform the following steps:

1. Select **Restart** from the **Report** menu.

The report window closes and the input window that is used to specify the object of the report is displayed again.

2. Enter the requested information in the input window and select **OK**.

Supervisor displays the report window with the newly updated information for the selected object.

Chapter 5: Scripting CMS operations

Scripting enables the automation of tasks such as running reports, exporting report data, and other operations.

This section contains the following topics:

- Before you begin on page 129
- Tasks scripts can automate on page 129
- Interactive and automatic scripts on page 130
- Creating scripts on page 130
- Scripting other Supervisor operations on page 135
- Error and warning messages on page 139

Before you begin

Before a script can be run through *Supervisor*, the following conditions must be met:

- The username associated with an automatic script must be assigned all the permissions required for all operations specified by the script.
- No more than four scripting *Supervisor* sessions, including background sessions initiated by automatic scripts, can be run simultaneously on a PC.
- The PC must be running at the time when an automatic script is scheduled to run.
- Once a script is created, it can be started by accessing the script file directly from a Microsoft Windows Explorer window.
- Due to PC-related issues, it is strongly recommended that mission-critical activities, such as backups, be scheduled through Timetables on the *CMS* server. For more information about Timetable scheduling, see <u>Creating and scheduling a timetable</u> on page 409.

Tasks scripts can automate

Scripts can be used to automate several CMS tasks, such as:

• Running reports

- Exporting data from reports
- Performing **Dictionary** operations and reports
- Administering **Exceptions** and requesting Exception reports
- Performing Agent Administration operations
- Performing Call Center Administration operations and reports
- Performing System Setup operations
- Performing Maintenance operations and viewing the Error Log
- Administering User Permissions

Interactive and automatic scripts

Each script is designated to be either interactive or automatic, as defined below:

- An interactive script runs in the current *Supervisor* session and the actions display on the PC. If the *Supervisor* session is disconnected from the *CMS* server, the script will not run.
- An automatic script launches a new *Supervisor* session that logs into *CMS* and runs the requested tasks as a background process. Script actions are not displayed on the screen. Although *Supervisor* provides the ability to create automatic scripts, a third-party scheduling program must be used in order to run the scripts automatically on a regular schedule.

Creating scripts

This section describes how to create interactive or automatic scripts used to run reports. Interactive and automatic scripts used to run reports have the following differences:

- An *interactive* script runs in the current *Supervisor* session and the actions display on the PC. If the Supervisor session is disconnected from the *CMS* server, the script will not run.
- An *automatic* script launches a new *Supervisor* session that logs into *CMS* and runs the requested tasks as a background process. Script actions are not displayed on the screen. Although *Supervisor* provides the ability to create automatic scripts, a third-party scheduling program must be used in order to run the scripts automatically on a regular schedule.

This section contains the following topics:

<u>Accessing scripts</u> on page 131

- <u>Accessing the script options</u> on page 131
- Creating an interactive report script on page 133
- Creating an automatic report script on page 133
- Creating a script to export report data on page 134
- <u>Creating a script to export report data as HTML</u> on page 134

Accessing scripts

Scripts can be created and accessed through the **Scripts** button found on several dialog boxes. Dialog boxes containing the **Scripts** button can be accessed through the following menu selections:

- Commands > Reports
- Commands > Dictionary
- Commands > Exceptions
- Commands > Agent Administration
- Commands > Call Center Administration
- Tools > System Setup
- Tools > Maintenance
- Tools > User Permissions

Scripts can also be accessed from agent administration windows or once a report is run. The **Script** button is also available when you use any other *Supervisor* command or tool that allows you to add or change objects.

Accessing the script options

Before you create scripts, you should be aware of the different options and behaviors available for scripts.

To access script options:

1. Select **Tools > Options > Scripting**.

The **Scripting** dialog provides the fields required to set the scripting options, which includes:

• User ID - This read only ID allows automatic scripts to make their connection to the CMS server. The login ID and password are not validated until an automatic script is run.

- Set User You must specify a CMS user ID and password before you can run any automatic scripts. For more information, see <u>Setting user ID and password</u> on page 132.
- **Logging Level** The extent to which script-related activities and outputs are logged, according to the following criteria:
- **Minimum** Logged activities are limited to those errors and messages from *Supervisor* which would otherwise be displayed when the scripts are run manually.
- **Normal** Logged activities include those recorded at the **Minimum** setting, plus the following information: task start time; task end time; name of the script.
- **Maximum** Logged activities include all those recorded at **Minimum** and **Normal** settings, plus additional error messages which may be useful for debugging a script.
- Log File: Path Allows you to specify a non-default file directory path. Selecting the folder icon to the right of this field also lets you browse the file system to select a log file directory.
- Log File: Size Allows you to specify the size of the log file before it rolls over and begins to overwrite itself.

Setting user ID and password

Before you create an automatic script, you must set a user ID and password to allow the script to log into CMS. If you do not set the ID and password beforehand, you are prompted to do so the first time you save an automatic script.

Setting users procedure

Follow these steps to set a user ID and password for automatic scripts.

- 1. Select **Tools > Options > Scripting**.
- 2. Select Set User.
- 3. Enter your CMS login ID in the User ID field.
- 4. Enter your password in the **Password** field.
- 5. Enter your password again in the Confirm Password field.
- 6. Select OK.

Result:

The two password entries are checked to make sure they match. If they do not, the message Passwords do not match appears and you remain in the window. If they match, your user ID and password are encrypted and saved and are used to log in when this or any automatic script is run.

Your user ID and password are not verified with the server at this time. The only way to check if they are correct is to attempt to run an automatic script and check the script log to see if the script ran successfully.

Creating an interactive report script

To create an interactive script used to run a report:

1. Select **Commands** > **Reports** from the Controller Window menu bar.

Supervisor displays the **Reports** window.

- Select the tab associated with the type of report you want to run (Real-Time, Historical, or Integrated), and then highlight the report from the categories and listings which are displayed.
- 3. Select the **Script** button on the report selector window.

Supervisor displays the Save as Script window.

4. Select a directory and file name for the script and select **Save**.

Supervisor closes the **Save as Script** window and returns you to the report selector window.

Creating an automatic report script

To create an automatic script used to run a report:

1. Select **Commands** > **Reports** from the Controller Window menu bar.

Supervisor displays the Reports window.

2. To select a report for scripting, select the appropriate report type from the dialog box tabs (Real-Time, Historical, or Integrated), highlight the report, and select **OK**.

Supervisor displays the input window for the selected report.

3. Enter the appropriate data in the input window and run the report by selecting **OK**.

Supervisor displays the selected report.

Note:

If a historical report was selected, set the **Destination** controls to **View Report on Screen**.

- In the dialog displayed for the report, select **Reports > Script** from the main menu.
 Supervisor displays the **Save as Script** window.
- 5. Select a directory and file name for the script. The file type is set to *automatic* by default.

6. Select Save.

Executing this automatic script causes the report to run with the inputs provided during its creation.

Creating a script to export report data

To create a script that exports report data to the clipboard or a specified file:

1. Run a report and display it to screen. See <u>Choosing a report</u> on page 125 for this procedure.

Supervisor displays the window for the selected report.

- 2. From the Edit menu of the report window, select one of the following actions:
 - Export Chart Data
 - Export Table Data
 - Export All Data

The data export dialog box is displayed. The dialog that is displayed will vary according to which export option is selected.

Some of these options can also be selected from a pop-up menu by performing a right-click in the report window.

3. Set the appropriate options in the data export dialog, and then select the **Script** button.

Do not select **OK** after the options are selected.

Supervisor displays the Save as Script window.

- 4. Select a directory and file name for the script, and set the file type to either **Interactive** or **Automatic**.
- 5. Select Save.

Creating a script to export report data as HTML

To create a script that saves a Supervisor report as an HTML file:

 Select a report that you want to export as HTML and display it to the screen. For more information, see <u>Choosing a report</u> on page 125. Supervisor displays the report window. 2. From the menu bar of the report window, select **Reports > Save As HTML**.

Supervisor displays the Save As HTML window.

3. Select the appropriate option from the **Template** group.

A template can be used to provide company logos, background color, specific fonts, or surrounding text to the HTML file. If you do not select a template, the export process generates basic HTML tags to display the report.

Supervisor provides you with several templates that can be found in the \samples directory of the main Supervisor directory.

- 4. In the Output field, select a name for the HTML file you are creating. To save the file in a directory other than the current directory, specify a full file path, such as c:\temp\myrpt.htm. You may also use the browse button located to the right of this field to navigate to a target directory.
- 5. Select the **Script** button.

Supervisor displays the Save as Script window.

- 6. Select a directory and file name for the script, and set the file type to either **Interactive** or **Automatic**.
- 7. Select Save.

If there are charts associated with the file, they are converted into. GIF files. After the HTML is saved, you can move or copy it and all associated graphics files to a web server directory for viewing on the Internet or an Intranet.

Scripting other Supervisor operations

This section provides information on the procedures used to create and save scripts for actions not associated with reports.

This section contains the following topics:

- <u>Actions not associated with reports</u> on page 136
- <u>Scripting an input window</u> on page 136
- <u>Scripting an action</u> on page 137
- Organizing scripts on page 138

Actions not associated with reports

Actions not associated with reports include:

- Displaying an input window for actions, not reports, requiring data entry when the script is run.
- An Add, Modify, or Delete action

Scripting an input window

This procedure describes how to create a script that displays an input window for a specific, non-report operation. Executing the script displays the input window for the operation selected when this script was created.

Actions captured in a script

Actions associated with the following functions can be captured in a script:

- Dictionary
- Exceptions
- Maintenance
- System Setup
- Agent Administration
- Call Center Administration

Steps

To create a script for an input window:

1. Select the necessary item from the **Commands** menu on the Controller Window.

Supervisor displays the associated selector window for the item selected.

Do not double-click the option or press the **Enter** key when an operation is highlighted or the action will be initiated and the script recording will be aborted.

 Highlight the operation to be made into a script from the **Operations**: list on the **Operations** tab of the selector window and then select the **Script** button in the selector window.

Supervisor displays the Save as Script window.

The file type is set to **Interactive** by default.

3. Complete the **Save as Script** window by entering a file name and folder location and then select **Save** when finished.

Supervisor displays an acknowledgment message to indicate that the script has been saved.

4. Select the **OK** button on the acknowledgment message box.

Supervisor closes the Save as Script window and the selector window remains open.

Scripting an action

Use this procedure to create a script that results in the execution of an action. Running the saved script will cause an **Add**, **Modify**, **No action**, or **Delete** action to be performed for the selected operation.

To script a Supervisor action:

- 1. Select the necessary item from the **Commands** menu on the Controller Window. Valid items for scripting an action include:
 - Dictionary
 - Exceptions
 - Maintenance
 - System Setup
 - Agent Administration
 - Call Center Administration

Supervisor displays the selector window associated with the selected item.

- 2. Highlight the operation to be made into a script from the **Operations:** list on the **Operations** tab of the selector window.
- 3. Select the **OK** button.

Supervisor displays the input window for the selected operation.

4. Select **Actions** > **Script** from the menu bar of the input window. If none of the valid scriptable actions, **Add**, **Modify**, or **Delete**, are present, you cannot select **Script**.

Supervisor displays the Save as Script - Action window.

- 5. Select the action to be performed by the script.
- 6. Select the **OK** button.

Supervisor displays the Save as Script window.

Note:

If the **Cancel** button is selected, *Supervisor* dismisses this window and displays the input window without saving an action.

- 7. In the **Save as Script** window, select a file folder location and file name.
- 8. Specify the script type as either **Automatic** or **Interactive**.
- 9. Select Save.

Supervisor displays an acknowledgment message box stating that the script has been saved.

10. Select the **OK** button on the acknowledgment message box

Supervisor displays the Save as Script - Action window.

Organizing scripts

The **Organize Scripts** window provides a simple file management interface which allows you to rename, delete or move script files.

To organize existing Supervisor scripts:

1. Select **Scripts > Organize Scripts...** from the menu bar on the Controller Window.

Supervisor displays the Organize Scripts window.

- 2. Perform actions on the scripts as needed. This can include renaming, deleting, and moving.
- 3. When you are finished organizing scripts, select **Close** to exit the **Organize Scripts** window.

Note:

Organize Scripts is not supported on Windows Vista; instead, Windows Explorer can be used to perform the same file management functions. The default location for the Scripts folder on Windows Vista is C:\Users\<username>\AppData\ Roaming\Avaya\CMS Supervisor R15\Profiles\<cmslogin>\Scripts.

Error and warning messages

This section lists possible error messages which may be encountered when running scripts and describes their associated causes and possible solutions:

Message	Reason	Solution
This script will not run unless a <i>CMS</i> login ID and password have been specified.	The CMS login ID and password have not been set on the Scripting tab of the Controller Options window.	Specify a login ID and password on the User Information window.
Automatic scripts are set to run with the permissions of another user of the PC.	The User Information window designates the other user as the owner of automatic scripts.	You can change the permissions via the login information on the Scripting tab of the Options window for the Controller Window. The change will apply to subsequent automatic scripts that are run on the PC.
(Action) <i>Supervisor</i> displays the Save as Script: Add or Replace window.	The file already exists.	 Select one of the following actions at the bottom of the window: Add (default) - Adds the new script to the end of the existing script Replace - Deletes the existing script and create a new script file Cancel - Closes the Add or Replace window and returns to the Save as Script window Help - Displays the help topic for the current window.

Chapter 5: Scripting CMS operations

Chapter 6: Administering contact center agents

This section provides information on using the Agent Administration window.

The items on the **Agent Administration** menu vary depending on the type of switch that *Call Management System* (*CMS*) is connected to and the features that are activated on the switch. These procedures include instructions for administering agents in an Automatic Call Distribution (ACD) with and without the Expert Agent Selection (EAS) feature.

This section contains the following topics:

- Starting or stopping an agent trace on page 141
- Viewing current agent trace states on page 143
- <u>Changing agent skills</u> on page 145
- Changing skills for multiple agents on page 151
- <u>Changing extension split assignments</u> on page 153
- <u>Moving extensions between splits</u> on page 155
- <u>Running a split members report</u> on page 157

Starting or stopping an agent trace

This section provides the procedure for starting and stopping the tracing of agents. Tracing an agent records the activities of the agent, state changes, and time when these events occurred. The agent trace report displays this information when it is run. The agent trace report can help you to evaluate how well agents use their time.

Before you begin

The following items should be read and understood before working with agent traces:

- Traces can be activated for a limited number agents across all ACDs from one CMS server. This limit depends on the platform model. You can find this limit in Avaya CMS Capacities.
- The maximum number of agent trace records that can be stored is documented in Avaya Aura™ Communication Manager System Capacities Table. The oldest record is discarded and overwritten by the newest record when the file reaches the allocated maximum number of records.

- Turning a trace off does not delete the trace records for that agent. Agent trace records are overwritten automatically when the trace file reaches the maximum number of allocated records.
- The settings in the **Data Storage Allocation** window determine the maximum number of agent trace records that *CMS* can record. See <u>Data Storage Allocation</u> on page 294 for more information on this window.
- Starting and stopping agent traces requires that the Data Collection feature is currently activated.
- An agent trace must be started before the Agent Trace report can be run.
- Scripts can open and use the Activate Agent Trace window. You can also schedule the script. See <u>Chapter 5: Scripting CMS operations</u> on page 129, for more information on scripting.
- The Activate Agent Trace window can be set on a timetable. See <u>Chapter 13: Using</u> timetables and shortcuts on page 407, for more information.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To start or stop an agent trace, the user ID used to log in to this *Supervisor* session requires *write* permission for the Agent Administration subsystem.
- To view an agent trace report, the user ID used to log in to this *Supervisor* session requires *read* permission for the Reports subsystem.

Steps

1. From the Controller Window, select **Commands > Agent Administration**.

Supervisor displays the **Agent Administration** window.

On Communication Manager systems with EAS:

On Communication Manager systems without EAS:

- 2. In the **Operations:** list, highlight **Activate Agent Trace**.
- 3. In the **ACD** drop-down list, select the ACD on which the agent trace will be run or is currently running.
- 4. Select OK.

Supervisor displays the Activate Agent Trace window.

5. In the **Agent names or logids:** field, enter the names or login IDs of the agents who are to be traced or are being traced.

This field can accept multiple values. Multiple values must be separated by a semicolon (;).

Using the Browse button to the right of this field will only display those agents that have synonyms assigned to them through the Dictionary.

- 6. Perform one of the following actions for the **Agent trace:** options:
 - To start an agent trace, select **On**.
 - To stop an agent trace that is currently running, select Off.
- 7. Select **Actions** > **Modify** from the menu bar to start or stop the agent trace.

The status bar displays **Working** and then, if successful, displays **Successful** when the operation finishes.

Viewing current agent trace states

This section provides the procedure for viewing all agent traces that are set to either **On** or **Off**. To view all **On** or **Off** agent traces:

1. From the Controller Window, select **Commands > Agent Administration**.

Supervisor displays the Agent Administration window.

On Communication Manager systems with EAS:

On Communication Manager systems without EAS:

- 2. In the **Operations:** list, highlight **Activate Agent Trace**.
- 3. In the **ACD** drop-down list, select the ACD on which the agent trace will be run or is currently running.
- 4. Select OK.

Supervisor displays the Activate Agent Trace window.

- 5. Ensure that the **Agent names or logids:** field is blank.
- 6. In the **Agent trace:** options, select the state to view:
 - **On** Displays all currently active agent traces.
 - Off Displays all disabled agent traces.
- 7. From the menu bar, select **Actions** > **List All**.

Supervisor displays a window with a list of all agents who are currently in the selected trace state.

Listing agents traced

This section provides the procedure for listing agents and dates for which agent trace data is available on reports. As with most operations, it is possible to run these operations through scripts and timetables. For more information on scripts and timetables, see <u>Chapter 5: Scripting</u> <u>CMS operations</u> on page 129 and <u>Chapter 13: Using timetables and shortcuts</u> on page 407, respectively.

Before you begin

To view data through this operation, an agent trace must be activated for one or more agents. Also, agents for whom traces are activated must log in so that *CMS* creates agent trace records.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To list all agents traced, the user ID used to start this *Supervisor* session must have *read* permission for the Agent Administration subsystem.

Steps

To list all agents with trace data:

1. From the Controller Window, select **Commands > Agent Administration**.

Supervisor displays the Agent Administration window.

- 2. In the **Operations:** list, highlight **List Agents Traced**.
- 3. In the **ACD:** field, select the ACD for which agents being traced will be listed.
- 4. Select OK.

Supervisor displays the List Agents Traced window.

Note:

The procedure for viewing agent trace records varies according to the information that you enter in the fields of the List Agents Traced window. The results for listing agents traced relies on the entries made in the Agent(s): field, the Dates: field, or a combination of the two. For example, you can specify a small range of agents in the Agent(s): field and a date range in the Dates: field. This will result in a list of only the specified agents for the date range entered.

5. Use the following descriptions to determine how information is entered in the **Agent(s)**: and **Dates:** fields:

 Use the Agent(s): field to specify none, one, or more agents to use in displaying agent trace records.

Leave this field blank to show all agent trace records for the dates entered in the **Dates:** field.

Only those agents with login IDs in the Dictionary can be entered in the **Agent(s)**: field.

This field can accept multiple values. Multiple values must be separated by a semicolon (;).

 Use the Dates: field to specify no date, a single date, multiple dates, or a range of dates.

Leave this field blank to show all agent trace records for the agents entered in the **Agent(s):** field.

This field can accept multiple dates or a range of dates. Multiple dates must be separated by a semicolon (;).

- Leave both the **Agent(s):** and **Dates:** fields blank to have *Supervisor* display all agent trace records.
- 6. Select **Actions** > **List All** to display the agent trace records that match the information that you entered in the **Agent(s):** and **Dates:** fields.

Supervisor displays a secondary window listing the dates and agents for which agent trace data is available, sorted by date.

Changing agent skills

Use the **Change Agent Skills** window to configure agent skills on systems with Expert Agent Selection (EAS).

Actions performed by this feature

Use this feature to perform the following actions:

- View the current skill assignment
- Change the skills of an agent or agent template
- Add agents to an agent template
- Set the skill of an agent or agent template to *primary* or *secondary*
- Set the level of the skill for an agent from 1 to 16

Before you begin

The following items should be read and understood before changing agent skills:

- The Change Agent Skills item is only available for ACDs on which EAS is activated.
- When agent skills are changed, the change is made to the Communication Manager system and remains in effect until another change is made through *Supervisor* or the Communication Manager system itself.
- When agent skills are changed, you cannot exit the **Change Agent Skills** window until the ACD responds to the requested agent changes.
- A template can be any existing agent profile where the skill settings of the profile are applied to other agent profiles. You can specify multiple agents individually and by using ranges. Entries must be separated with semicolons. You are limited to 250 characters in this field. After you apply the skill settings, all of the agents specified will have the same skills, levels, interrupt types and percents as the agent profile being used as a template. It is assumed you have the same level of permissions for all agents specified in the change.
- Skill changes take effect immediately for agents who are in AUX work mode, AVAIL (available), or logged out. Changes are pending for agents on calls or in ACW work mode until the agent enters the AUX work mode, becomes available, or logs out. Because of this, agents who frequently have calls on hold may have skill changes remain pending for a longer time than expected.
- Changing agent skills should only be done through *Supervisor* as it checks if the agent has the appropriate permissions for the newly assigned skills. The *CMS* ASCII interface does not perform permission checking which can result in agents belonging to skills to which they do not have permissions.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view agent skill assignments, the user ID used to log in to this *Supervisor* session requires *read* permission for the Agent Administration subsystem.
- To change agent skills, the user ID used to log in to this *Supervisor* session requires *write* permission for the Agent Administration subsystem.

Steps

To change skills for an agent:

- From the Controller Window, select Commands > Agent Administration.
 Supervisor displays the Agent Administration window.
- 2. In the **ACD** field, select the ACD for which you want to change agent skills.
- 3. In the Operations: list, highlight Change Agent Skills.
- 4. Select OK.

Supervisor displays the Select Agent/Template window.

- 5. In the **Select Agent/Template** window, enter the Agent ID using one of the following methods in order view or change their skills:
 - The agent login ID
 - The name of the agent
 - An agent template

See the beginning of this section for more information on agent templates.

6. Select OK.

Supervisor displays the **Change Agent Skills** window with the agent or template name and login ID in the title bar.

The skills and skill level for the agent or template that you named are shown in the **Assigned Skills** field and **Level** field, respectively.

Skill names are shown for the skills that are defined in the Dictionary. Skill numbers are shown for the skills that are not defined in the Dictionary.

These skill settings for an agent can be passed on to other agent profiles. To specify the agents who are to receive the skill settings, select **Use for one or more Agents** and enter the agent IDs in the associated field.

7. Choose one of the following options to change the skills of this agent or template.

lf	Then			
You want to change which calls an agent receives first	Select a different method in the Call Handling Preferences group box. Calls can be distributed to the selected agent based on:			
	 Skill Level Greatest Need Percent Allocation The Skill Level for the agent is shown in the Assigned Skills list. Percent Allocation is only available if Avaya Business Advocate is enabled on the Communication Manager system. 			
You want to change the	Perform one of the following actions:			
skill that is used to queue an agent's direct agent calls	 Select a new skill from the Direct Agent Skill drop-down list. 			
	• Enter the name or number of the skill in the Assigned Skills column of the Agent Skills and Skill Levels group that will be used for queuing the direct agent calls to the specified agent. You may then select the skill from the Direct Agent Skill drop-down list.			
	The Direct Agent Skill list does not contain reserve skills. If the agent who is currently displayed has only reserve skills in the Assigned Skills list, no Direct Agent Skill can be assigned to that agent.			
You want to change the	Perform the following procedure:			
level/type that is associated with skill that is already assigned	 In the Assigned Skills list, select the level of the skill for which you want to change the value. Note that if you have a Skill Level Call Handling Preference, an arrow indicates the agent's Top Skill assignment. 			
	 Select a new value for the skill level from the Level drop-down list in the Agent Skills and Skill Levels group. 			
	If Skill Level is selected in the Call Handling Preference group and only reserve levels are assigned to an agent, that agent does not have a top skill and the Make Top Skill button is disabled.			
	3. Select OK .			

lf	Then			
You want to change the interrupt type associated with skill that is already assigned for Communication Manager version 6.0 and up	Perform the following procedure:			
	 In the Assigned Skills list, select the interrupt type of the skill for which you want to change the value. 			
	 Select a new value for the interrupt type from the interrupt type drop-down list in the Agent Skills and Skill Levels group. 			
	3. Select OK.			
You want to remove skills	Perform the following procedure:			
that are assigned to this agent or template	 In the Assigned Skills field, select the skills to remove from the agent. 			
	2. Select the Delete Skills button.			
	Note that if an agent has only one assigned skill, this skill cannot be deleted.			
You want to add skills to this agent or template	Select the Add Skills button. In the Available Skills list of the Add Agent Skills window, highlight one or more skills that you want to assign to the agent as well as the Skill Level for these new skills. The Available Skills field lists all the skills that are defined on this ACD. When you are finished adding skills, select the OK button in the Add Agent Skills window.			
You have Avaya Business	Perform the following procedure:			
Advocate and want to specify a new percent allocation	 In the Call Handling Preferences group, select Percent Allocation. 			
	Note that the Percent Allocation field is unavailable if a reserve level has already been specified for an agent or template.			
	 Select the Yes button from the warning window. This indicates that you want to enable the Percent Allocation feature. 			
	If an agent or template has Percent Allocation call handling preference, the total percent allocation for all standard skills must equal 100%.			
	By default, Direct Agent Calls First is activated. If a call handling preference other than Percent Allocation is selected, direct agent calls are delivered first, and the Direct Agent Calls First check box is not applicable.			

lf	Then			
You want to make an Assigned Skill the Top Skill for this agent	Perform the following procedure:			
	 In the Assigned Skills column of the Agent Skills and Skill Levels group, select the skill that you want to be the top skill of the agent. 			
	2. Select the Make Top Skill button.			
You want to apply the	Perform the following procedure:			
changes to multiple agents	1. Select the Use for One or More Agents check box.			
	 Enter the agent names or login IDs in the Agent Name(s)/Login ID(s) field, select them from the drop-down list, or select them from the Browse window. 			
	3. Select OK .			
	Changes are submitted to the <i>CMS</i> server. If a move is pending, you are notified that the operation will not occur until the pending conditions are resolved. If you are applying a template to multiple agents, <i>Supervisor</i> buffers the change agents skills requests and send them to the <i>CMS</i> server one at a time. <i>Supervisor</i> displays a status box that indicates the status of each requested agent change.			
	If an error in encountered with changes to agent skills, <i>Supervisor</i> displays a message that states what is in error. Select OK or Cancel to dismiss the error message and return to the Change Agent Skills window so that the error can be corrected.			
	4. Select OK .			
	If the change is successfully made, <i>Supervisor</i> displays a successful message in the status bar.			
	If the state of an agent is not in AUX or AVAIL, <i>Supervisor</i> displays a message which states that the changes will be applied when the agent returns to one of those states.			
	5. Select OK .			
	Supervisor closes the Change Agent Skills window.			

lf	Then			
You are finished making changes	Perform one of the following actions:			
	 Select OK in the Select Agent/Template window. This action saves the changes that you made to the agent skills. 			
	 Select Cancel in the Select Agent/Template window. This action cancels any changes that you made. 			
You want to make skill assignment changes for other agents or templates	Perform the following actions:			
	 Select another agent or template in the Select Agent/Template window. 			
	2. Return to Step 5 and continue with the procedure.			

Changing skills for multiple agents

This section provides the procedure for changing skills for more than one agent at a time. Use the **Multi-Agent Skill Change** window to view current skill assignments or to change a skill for as many as 32 agents. You can also use this window to specify the skill levels and type of the skills.

Before you begin

The following items should be read and understood before beginning work with the **Multi-Agent Skill Change** window:

- When agent skills are changed, the change is made to the Communication Manager system and remains in effect until another change is made through *Supervisor* or the Communication Manager system.
- You cannot exit from the **Multi-Agent Skill Change** window until the Communication Manager system responds to the requested changes.
- Skill changes take effect immediately for agents who are in AUX work mode, AVAIL (available), or logged out. Changes are pending for agents on calls or in ACW work mode until the agent enters the AUX work mode, becomes available, or logs out.
- For agents who frequently have calls on hold, skill changes can remain pending for a longer time than expected.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view agent skill assignments, the user ID used to log in to this *Supervisor* session requires *read* permission for the Agent Administration subsystem.
- To change agent skills, the user ID used to log in to this *Supervisor* session requires *write* permission for the Agent Administration subsystem and for the skills to which agents are assigned.

Steps

To change one skill for multiple agents:

1. From the Controller Window, select **Commands** > **Agent Administration**.

Supervisor displays the Agent Administration window.

- 2. In the **ACD**: field, select the ACD for which you want to change agent skills.
- 3. In the **Operations:** list, highlight the **Multi-Agent Skill Change** item.
- 4. Select OK.

Supervisor displays the Multi-Agent Skill Change window.

- 5. Use one of the following methods to choose a skill:
 - Double-click the skill name or number.
 - Highlight a skill and press the **Enter** key.

Supervisor displays a second window that shows the agents assigned to this skill who are currently logged in.

Clicking the left mouse button on the column headings sorts the contents between ascending and descending order.

To view or change the current skills of an agent in the skill window, double-click the agent name.

- 6. To move agents from the current skill to another skill, perform one of the following actions:
 - To move a single agent, use the mouse to drag-and-drop an agent to a new skill in the **Skill List** window.
 - To move multiple agents to a new skill, hold down the **Ctrl** key and click on multiple agents to select them. You can select a range of agents by clicking on the agent at the beginning of the range, holding down the **Shift** key, and then clicking the agent at the bottom of the range.

Use the drag-and-drop method to move the agents from the window for their current skill to a new skill in the **Skill List** window.

• Another way of moving agents from one skill to another is to open a window for the new, target skill by double-clicking that skill in the Skill List window. You can then drag-and-drop agents between the two skill windows.

Note that holding down the **Ctrl** key while dragging and dropping agents will add, not move, the agent or agents to the new skill.

Supervisor displays the **Move Agents Between Skills** window with the **Agents** field showing the following:

- The agents you moved
- The call-handling preferences of the agents
- The reserve level or skill level of each agent
- The service objective of each agent
- The percent allocation for the skill of each agent. Percent allocation is only available on Communication Manager systems with *Avaya Business Advocate*.
- The interrupt type for the skill of each agent. Interrupt type is only available on Communication Manager Version 6.0 and up.

The **Move** group displays information showing the skills involved in moving this agent. If the agent is being added to a new skill, not moved, the **From Skill:** information is blank and the **Preserve Original Levels** option is unavailable.

- 7. In the **Move Agents Between Skills** window, perform one of the following actions to complete moving agents from skill to skill:
 - Select the Level option and enter a skill-level value for each agent that you moved to this new skill.
 - To keep the current skill level of the agent, select the **Preserve Original Level** option. This action deactivates the **Level** option.
 - For Communication Manager Version 6.0 and up, select the interrupt type for the new skill for the selected agents.
- 8. Select OK.

If one or more agent moves fail, *Supervisor* displays a status window showing the reasons for failure. Otherwise, the status window notifies you that the change is pending.

Changing extension split assignments

This section provides the procedure for assigning an extension to a different split. This feature is used for Communication Manager systems without Expert Agent Selection (EAS). Use the **Change Extension Split Assignments** window to list the extensions that are in the currently assigned splits or to change the splits that are assigned to a specific extension number.

Before you begin

The following should be read and understood before changing extension split assignments:

- You cannot exit from the **Change Extension Split Assignments** window until the Communication Manager system responds to the requested changes.
- Extension split assignment changes take effect immediately for agents who are in AUX work mode, AVAIL (available), or logged out. Changes are pending for agents on calls or in ACW work mode until the agent enters the AUX work mode, becomes available, or logs out.
- For agents who frequently have calls on hold, extension split assignment changes can remain pending for a long time.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view extension split assignments, you need *read* permission for the Agent Administration subsystem.
- To change extension split assignments, you need *write* permission for the Agent Administration subsystem and for the splits to which the extensions are assigned.

Steps

To change an extension split assignment:

1. From the Controller Window, select **Commands > Agent Administration**.

Supervisor displays the Agent Administration window.

- 2. In the **ACD** field, select the ACD for which you want to change extension split assignments.
- 3. Select **Operations > Change Extension Split Assignments**.
- 4. Select OK.

Supervisor displays the Select Extension window.

5. In the **Select Extension** window, enter the extension number for which the split assignment is to be changed.

The extensions that are assigned to each split can be viewed in the **Move Extensions Between Splits** window. See <u>Moving extensions between splits</u> on page 155 for more information.

6. Select OK.

Supervisor displays the Change Extension Split Assignments window.

The **Move Extension From Split** field shows the current split assignment. The **Move Extension To Split** field shows available split names or numbers. If an agent is logged in on the extension, the logged-in icon is displayed as shown in the above graphic. If an agent is not logged in on the extension, an icon is not displayed.

7. Perform one of the following actions:

If	Then		
You want to change split assignments for an extension other than the one that is displayed	Select Cancel to return to the Select Extension window and then return to step 5.		
You want to change split assignments for this extension	Continue with the next step.		

8. Perform one of the following actions:

If	Then
You want to remove a split assignment from this extension	Select the split name or number that is to be removed from this extension in the Move Extension From Split box.
You want to assign a split assignment to this extension	Select the split name or number that is to be assigned to this extension in the Move Extension To Split box.

9. Select OK.

CMS applies the split assignment changes made to the extension.

Moving extensions between splits

This section provides the procedures for adding a split to an extension, removing a split from an extension, and moving an extension to another split. This features is for those systems without Expert Agent Selection (EAS). You can also use the **Move Extensions Between Splits** window to view extension split assignments.

Before you begin

The following items should be read and understood before moving extensions between splits:

- As many as 32 agents can be moved at one time.
- You cannot exit from the **Move Extensions Between Splits** window until the Communication Manager system responds to your request.
- Extension split assignment changes take effect immediately for agents who are in AUX work mode, AVAIL (available), or logged out. Changes are pending for agents on call or in ACW work mode until the agent enters the AUX work mode, becomes available, or logs out.

• For agents who frequently have calls on hold, an extension move request can remain pending for an extended period of time.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view extension assignments, the user ID used to log in to this *Supervisor* session requires *read* permission for the Agent Administration subsystem and the affected splits.
- To move extension assignments, the user ID used to log in to this *Supervisor* session requires *write* permission for the Agent Administration subsystem and the affected splits.

Steps

To move extensions between splits:

1. From the Controller Window, select **Commands > Agent Administration**.

Supervisor displays the Agent Administration window.

- 2. In the **ACD**: field, select the ACD that contains the extensions to move.
- 3. In the Operations: list, highlight Move Extensions Between Splits.
- 4. Select OK.

Supervisor displays the Move Extensions Between Splits window.

- 5. Select the split to work with by performing one of the following actions:
 - Double-click the split name or number in the **Split List** window.
 - Highlight the split to work with in the **Split List** window and then select **Split > Open** selected split from the menu bar.
- 6. To move one or more extensions from the current split to another split, perform one of the following actions:
 - To move a single extension, use the mouse to drag-and-drop an extension to a new split in the **Split List** window.
 - To move multiple extensions to a new split, hold down the **Ctrl** key and click on multiple extensions to select them. You can select a range of extensions by clicking on the extension at the beginning of the range, holding down the **Shift** key, and then clicking the extension at the bottom of the range.

Use the drag-and-drop method to move the extensions from the window for their current split to a new split in the **Split List** window.

 Another way of moving extensions from one split to another is to open a window for the new, target split by double-clicking that split in the Split List window. You can then drag-and-drop extensions between the two split windows.

Supervisor displays the Move Extensions Between Splits window.

7. Select **OK** in the **Move Extensions Between Splits** window to complete the moving of the selected extensions.

Running a split members report

Note:

The split members report is only available to customers who have non-EAS systems.

This section provides the procedure for running a split members report. This report displays the extensions that are members of a specific split. Unlike regular reports, a custom or designer report cannot be created from the split members report. The split members report lists the selected splits in numerical order, each split's assigned name, and the extensions that are assigned to the split.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To run a split members report, the user ID used to log in to this *Supervisor* session requires *read* permission for the Agent Administration subsystem and for all affected splits.

Steps

To run a split members report:

1. From the Controller Window, select **Commands > Agent Administration**.

Supervisor displays the Agent Administration window.

2. Select the **Reports** tab.

Supervisor displays the Reports tab of the Agent Administration window.

- 3. In the **ACD**: field, select the ACD on which to run the split members report.
- 4. In the **Reports:** list, highlight **Split Members**.
- 5. Select OK.

Supervisor displays the Split Members window.

- 6. Enter the split information in the **Splits:** field. This can be one split, multiple splits, or a range of splits. Multiple splits must be separated by a semicolon (;).
- 7. In the **Destination** group, select **View Report on Screen** or **Print Report on:**.

8. Select OK.

Supervisor displays or prints the Split Members report.

If the split does not have a name assigned, the **Split Name** columns on the report shows the split number. If the split has no extensions assigned to it, the **Extension** column is blank.

Chapter 7: Administering the contact center

This section provides the procedures to perform operations to configure the contact center.

Depending on the type of Communication Manager system and the features that are enabled on it, the items on the **Call Center Administration** menu will vary.

This section contains the following topics:

- Before you begin on page 159
- ACD Groups on page 159
- Call work codes on page 168
- VDN skill preferences on page 171
- Split/skill call profiles on page 175
- Trunk group assignments on page 179
- Trunk group members report on page 182
- <u>VDN-to-vector assignments</u> on page 184
- VDN call profiles on page 186
- <u>Vector configuration report</u> on page 191

Before you begin

If an ACD Group is selected as the current ACD in the **Dictionary** window, only those operations that are valid for the ACD Group will appear in the **Operations:** list.

ACD Groups

An ACD Group is an administrator-assigned collection of ACDs.

This section contains the following topics:

Before you begin on page 160

- ACD Group capabilities on page 161
- ACD Groups feature interfaces on page 162
- Permissions on page 162
- Adding an ACD Group on page 162
- Listing all ACD Groups on page 163
- Adding an ACD to an ACD Group on page 164
- Viewing the contents of an ACD Group on page 164
- Deleting an ACD from an ACD Group on page 165
- Modifying an ACD Group on page 166
- Deleting an ACD Group on page 167

Before you begin

The following items should be read and understood before you work with ACD Groups:

Availability

• If you add an ACD Group, you will need to log out of *Supervisor* and log back in to see this group as a choice in the appropriate dialogs.

Capacities/Performance

- A maximum of 12 ACD Groups can exist on an Avaya CMS server.
- Each ACD Group can contain zero to eight ACDs.
- CMS must be in single-user mode in order to add or delete ACD Groups.

Roles/Definitions

- An ACD Group cannot serve as the CMS master ACD.
- An ACD Group cannot be deleted if it is set as the current ACD.
- When created, ACD Groups will be assigned an ACD ID number from 27 through 38. This number is automatically assigned by *CMS* and cannot be altered.
- ACD Groups will not disallow an ACD being added as a member based on its version or feature set.
- Pseudo-ACDs cannot be a member of an ACD Group.
- When an ACD Group is deleted, all synonyms assigned to its member ACDs will remain.

Names must begin with an alphabetic character and can be up to 20 characters long. Valid characters are alphanumerical (a-z, A-Z, 0-9), underscore (_), blank (), comma (,), period (.), single quote ('), and plus (+). Multiple values are not allowed.

Synonyms

- Overlapping ACD Groups (groups having common member ACDs), could result in synonym conflict within the members of an ACD Group if poorly administered. Because of this capability, entity IDs in overlapping ACD Groups must be mutually exclusive.
- Entity synonyms must be unique for an ACD Group and across all of the ACDs that are members of the ACD Group.

Other

- User permissions are administered separately for an ACD Group and its member ACDs.
- *CMS* real-time custom reports are only displayed if data collection is enabled and the ACD link status is 'up' for at least one member ACD in the specified ACD Group. An error message will be displayed if these conditions are not met.
- Custom reports that are created with the **Single ACD Only** option enabled cannot be run for an ACD Group and vice versa.
- If a backup was created on a *CMS* server where the Global Dictionary feature was authorized, the data can only be restored on a *CMS* server that also has this feature authorized. If the Global Dictionary feature authorizations between a backup and the target *CMS* server do not match, an error is displayed, a message is written to the error log, and the restore or migration fails.

ACD Group capabilities

This optional feature provides the following capabilities:

- Easy administration of synonyms in the Dictionary across multiple ACDs. A synonym assigned to a *CMS* entity for an ACD Group is then propagated to all members ACDs within that group. For example, if you assign skill 102 in the ACD Group with the synonym of *Sales*, this synonym is assigned to skill 102 for all ACDs within that group. This feature should be utilized when a contact center uses multiple ACDs that require the same synonyms across all of the ACDs for the following entities:
 - Agent login IDs
 - Agent groups
 - Splits/Skills
 - AUX reason codes
 - Logout reason codes
 - Agent string values

- Split/Skill string values
- Generic string value synonyms
- The reporting of data from multiple ACDs through the use of custom reports. Reports for ACD Groups collect, aggregate, and display contact center data as a single value for the ACD Group instead of one set of values for each member ACD. Custom reports can be created through the *CMS* ASCII interface or ordered through the Avaya Professional Services Organization. For example, the reporting aspect of this feature can be used to view data for a *CMS* entity across multiple ACDs such as a skill, a specific agent login ID, and so forth.

ACD Groups feature interfaces

The ACD Groups feature is available through two interfaces:

- **Call Center Administration** This subsystem is used for administrators to create, modify, and delete ACD Groups.
- **Dictionary** This subsystem is used by *CMS* users who need to view ACD Groups, their contents, and to assign ACD Group synonyms.

Permissions

- To create, modify, and delete ACD Groups, a *CMS* user must have the *read* and *write* permissions for the **Call Center Administration** subsystem.
- If a *CMS* user only requires the ability to view ACD Groups and the member ACDs, *read* permission is required for the **Dictionary** subsystem.
- To assign synonyms to an ACD group, a *CMS* user requires the *read* and *write* permissions for the **Dictionary** subsystem as well as the ACD Group and its member ACDs.

Adding an ACD Group

This topic provides the procedure for creating an ACD Group. After an ACD Group is created, member ACDs can then be added. See <u>Adding an ACD to an ACD Group</u> for more information.

Before you begin

Before performing this procedure, you should ensure that you have read and understood <u>Before</u> you begin on page 160.

Steps

To add an ACD Group to CMS:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

- 4. In the **ACD Group Name:** field, enter a name for this new ACD Group.
- 5. From the menu bar, select **Actions** > **Add**.

CMS creates the ACD Group and assigns an ACD Group Number.

Listing all ACD Groups

This topic provides the procedure for listing all ACD Groups defined on the CMS server.

Listing all ACD Groups can be done through either the **Call Center Administration** or **Dictionary** subsystems. Only those *CMS* users who have *read* permission for the **Call Center Administration** subsystem can use the procedure listed below. *CMS* users who only work with synonyms or running reports should use the procedure associated with the **Dictionary** subsystem for listing all ACD Groups.

Steps

To list all ACD Groups defined on the CMS server:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

- 4. From the menu bar, select **Edit** > **Clear All** to remove any data from the fields.
- 5. Select Actions > List All.

Supervisor displays a dialog listing the ACD Groups defined on this CMS server.

Adding an ACD to an ACD Group

This topic provides the procedure for adding an ACD as a member of an existing ACD Group. This procedure can only be performed after an ACD Group has been created. See <u>Adding an ACD Group</u> on page 162 for more information.

Before you begin

Before performing this procedure, you should ensure that you have read and understood <u>Before</u> you begin on page 160.

Steps

To add an ACD to an existing ACD Group:

1. From the Controller Window, select **Commands** > **Call Center Administration**.

Supervisor displays the Call Center Administration window.

- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

- 4. In the **ACD Group Name:** field, enter the name of the ACD Group that will receive a new ACD member.
- 5. Select Actions > Find One from the menu bar.

If the ACD Group name is valid, its numeric ID is displayed in the **ACD Group Number** field and **1 matches found** is displayed in the status bar.

6. From the menu bar, select **Actions > Get contents**.

Supervisor displays the Call Center Admin ACD Groups Get contents dialog.

7. From the **ACD** drop-down list box, select the ACD that will be added to this group.

Note:

If a *CMS* user does not have read and write permissions for an ACD, that ACD will not appear in this list. To view all of the ACDs assigned to this ACD Group, see <u>Viewing the contents of an ACD Group</u> on page 164.

8. Select Actions > Add from the menu bar.

The selected ACD is added to this ACD Group and **Successful** is displayed in the status bar.

Viewing the contents of an ACD Group

This topic provides the procedure for displaying the contents of an ACD Group.

Viewing the contents of an ACD Group can be done through either the **Call Center Administration** or **Dictionary** subsystems. Only those *CMS* users who have *read* permission for the **Call Center Administration** subsystem can use the following procedure. *CMS* users who only work with synonyms or running reports should use the procedure in <u>ACD Groups</u> on page 49.

Steps

To view the current contents of an ACD Group:

1. From the Controller Window, select **Commands** > **Call Center Administration**.

Supervisor displays the Call Center Administration window.

- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

4. In the ACD Group Name: field, enter the name of the ACD Group you want to view.

Note:

If you are unsure of the name of the ACD Group, use <u>Listing all ACD Groups</u> on page 163 to determine the name.

5. From the menu bar, select **Actions > Find one**.

If the ACD Group name is valid, its numeric ID is displayed in the **ACD Group Number** field and **1 matches found** is displayed in the status bar.

6. Select Actions > Get contents.

Supervisor displays the Call Center Admin ACD Groups Get contents dialog.

7. In the ACD drop-down list box, select (none).

Note:

If you do not select the **(none)** item, only the selected item in the ACD list will be displayed in the resulting dialog if it is a member of the specified ACD Group. If it is not a member of the ACD Group, the resulting dialog will be blank.

8. From the menu bar, select **Actions > List all**.

Supervisor displays the **Call Center Admin ACD Groups Get Contents List All** dialog showing all ACDs that are members of this ACD Group.

Deleting an ACD from an ACD Group

This topic provides the procedure for removing an ACD from an ACD Group.

Before you begin

Before performing this procedure, you should ensure that you have read and understood <u>Before</u> you begin on page 160.

Steps

To remove an ACD from an ACD Group:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

4. In the **ACD Group Name:** field, enter the name of the ACD Group from which you want to delete a member ACD.

Note:

If you are unsure of the name of the ACD Group, use the procedure, <u>Listing all</u> <u>ACD Groups</u> on page 163.

5. From the menu bar, select **Actions > Get contents**.

Supervisor displays the Call Center Admin ACD Groups Get contents dialog.

- 6. In the **ACD** drop-down list box, select the ACD to remove from this ACD Group.
 - Note:

If a CMS user does not have read and write permissions for an ACD, that ACD will not appear in this list. To view all of the ACDs assigned to this ACD Group, see <u>Viewing the contents of an ACD Group</u> on page 164.

7. From the menu bar, select **Actions > Find one**.

If the select ACD is a member of the specified ACD Group, **1 matches found** is displayed in the status bar.

8. Select Actions > Delete.

The selected ACD is removed from the specified ACD Group and *Supervisor* displays a message box asking if the synonyms assigned to this ACD should be removed as well.

 Select the Yes button to remove all synonyms that were assigned to this ACD through ACD Group administration. Otherwise, select No to preserve all synonyms on the ACD.

Modifying an ACD Group

This topic provides the procedure for modifying the name of an existing ACD Group.

Steps

To modify the name of an existing ACD Group:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

4. In the ACD Group Name: field, enter the name of the ACD Group to change.

If you do not know the name of the ACD Group, use the procedure, <u>Listing all ACD</u> <u>Groups</u> on page 163.

5. From the menu bar, select **Actions > Find One**.

If the ACD Group name is valid, its numeric ID is displayed in the **ACD Group Number** field and **1 matches found** is displayed in the status bar.

6. In the ACD Group Name field, change the name of this ACD Group

See <u>Before you begin</u> on page 160 for information on naming conventions.

7. When you have finished changing the name of the ACD Group, select **Actions > Modify** from the menu bar.

The modification for the ACD Group is made to the *CMS* database and **Successful** is displayed in the status bar.

Deleting an ACD Group

This topic provides the procedure for deleting an existing ACD Group.

Before you begin

Before performing this procedure, you should ensure that you have read and understood <u>Before</u> you begin on page 160.

Steps

To remove an ACD Group from the CMS server:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **ACD Groups**.
- 3. Select OK.

Supervisor displays the Call Center Administration ACD Groups window.

4. In the **ACD Group Name:** field, enter the name of the ACD Group to delete.

If you do not know the name of the ACD Group, you can find it using the procedure, <u>Listing</u> all ACD Groups on page 163.

5. Select Actions > Find One from the menu bar.

If the ACD Group name is valid, its numeric ID is displayed in the **ACD Group Number** field and **1 matches found** is displayed in the status bar.

6. Select **Actions** > **Delete**.

The specified ACD Group is deleted from the CMS server.

Call work codes

A *call work code* is a number that represents a particular call type or activity to track in the contact center, for example, promotional ads, complaints, or repeat orders. Agents use the dial pad on their voice terminal to enter call work codes. This information is sent to *CMS* for management reporting and can then be viewed in the call work code and call record historical reports.

Note:

Some telephony applications that are used on PCs require that digits be entered through the software interface instead of the dial pad on the voice terminal.

This section contains the following topics:

- Before you begin on page 168
- <u>Permissions</u> on page 169
- Adding call work codes on page 169
- <u>Viewing call work codes</u> on page 170
- Listing all call work codes on page 170
- Deleting call work codes on page 171

Before you begin

The following items should be read and understood before beginning to work with call work codes:

• Call work codes must be positive integers with 1 to 16 digits. Names can be assigned in the Dictionary to call work codes that consist of nine digits or less. It is recommended that a fixed number of digits be used consistently for all call work codes. The use of a consistent number of digits makes it easier to add, delete, and search for call work codes.

- Call work code 0 is always assigned and is used to collect information on unassigned call work codes. Call work code 0 cannot be deleted. If an agent enters an unassigned call work code, it is displayed as code 0 on the call work code report. If a call work code exception is defined, the agent exceptions historical report shows the agents who entered invalid or unassigned call work codes.
- Disk space must be allocated for call work codes before they can be used. Call work codes are assigned to a specific ACD. The number of call work codes that can be assigned depends on the Data Storage Allocation settings for the ACD. See <u>Data Storage</u> <u>Allocation</u> on page 294 for more information.
- Daily, weekly, and monthly standard historical reports are available for call work codes. Call work codes also appear on the standard historical call record report. See the *Avaya CMS Supervisor Reports* document for more information.
- For standard call work code reports, the codes are assigned in the **Call Work Codes** window.
- To have a name refer to a call work code in a report instead of its numerical code, the name must first be assigned in the Dictionary.

Permissions

Depending on the procedure to be performed, the following permissions are needed:

- To view call work codes, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem.
- To add or delete call work codes, the user ID used to log in to this *Supervisor* session requires *read* and *write* permission for the Call Center Administration subsystem.

Adding call work codes

This section provides the procedure for adding a call work code for use in a contact center.

Steps

To add a call work code:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **Call Work Codes**.
- 3. Select OK.

Supervisor displays the Call Work Codes window.

The following fields are displayed in the **Call Work Codes** window:

- Number of codes allocated: Total number of call work codes that exist in the CMS database
- Number of codes administered: Total number of call work codes currently in use
- Call work code(s): Used to specify a call work code that will receive an action
- 4. Enter the new call work code in the **Call work code(s):** field.
- 5. Select **Actions > Add**.

The status bar displays **Successful** if the call work code is added to the CMS database.

Viewing call work codes

This section provides the procedure for viewing an existing call work code.

Steps

To view a call work code:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **Call Work Codes**.
- 3. Select OK.

Supervisor displays the Call Work Codes window.

- 4. Enter the call work code to view in the **Call work code(s):** field.
- 5. Select **Actions > Find one**.

If the call work code exists in the *CMS* database, the status bar displays the message, **1** matches found.

Listing all call work codes

This section provides the procedure for listing all existing call work codes.

Steps

To list all call work codes in the CMS database:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **Call Work Codes**.

3. Select OK.

Supervisor displays the Call Work Codes window.

4. Select **Actions** > **List all**.

Supervisor displays a secondary window that lists all call work codes having a synonym in the Dictionary.

Deleting call work codes

This section provides the procedure for deleting a call work code from the CMS database.

Steps

To delete a call work code:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **Operations:** list, highlight **Call Work Codes**.
- 3. Select OK.

Supervisor displays the Call Work Codes window.

- 4. Enter the call work code that you want to delete in the Call work code(s): field.
- 5. Select Actions > Find one.

If the specified call work code is found in the *CMS* database, the status bar displays the message, **1 matches found**.

6. Select **Actions > Delete**.

The status bar displays **Successful** if the call work code is deleted from the *CMS* database.

VDN skill preferences

A Vector Directory Number (VDN) is an extension number that enables calls to connect to a vector for processing. A VDN is not assigned an equipment location, but is assigned to a vector. A VDN can connect calls to a vector when the calls arrive over an assigned automatic-in trunk group or when calls arrive over a dial-repeating, Direct-Inward-Dialing (DID) trunk group and the final digits match the VDN. The VDN, by itself, may be dialed to access the vector from any extension that is connected to the switch.

Calls use VDN skills for routing based on the preferences that are assigned. The skill preferences are used in the assigned vector as *1st*, *2nd*, and *3rd*.

This section describes the procedures to change the first, second, and third skill preferences assigned to a VDN. You can also list the currently assigned skill preferences for VDNs as well as list all the VDNs that currently have skill preferences assigned to them.

This section contains the following topics:

- <u>Before you begin</u> on page 172
- Permissions on page 172
- Changing VDN skill preferences on page 173
- <u>Viewing VDN skill preferences</u> on page 173
- Listing all VDN skill preferences on page 174

Before you begin

The following items should be read and understood before working with VDN skill preferences:

- You can only work with VDN skill preferences on a Communication Manager system and the Expert Agent Selection (EAS) feature is present and activated.
- When VDN skill preferences are changed through *Supervisor*, the change takes place immediately on the Communication Manager system. This can affect the processing of calls at the time of the change.
- If the changes to VDN skill preferences should occur at a specific time, they can be run through scripts that can then be scheduled through a third-party scheduling application.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view current VDN skill preferences, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem and the affected VDNs.
- To change VDN skill preferences, the user ID used to log in to this *Supervisor* session requires *write* permission for the Call Center Administration subsystem and the affected VDNs.

Changing VDN skill preferences

This section provides the procedure for changing skill preferences for a VDN. This feature is only available on Communication Manager systems with the Expert Agent Selection (EAS) feature.

Steps

To change a VDN skill preference:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD**: field, select the ACD on which VDN skill preferences will be changed.
- 3. In the **Operations:** list, highlight **Change VDN Skill Preferences**.
- 4. Select OK.

Supervisor displays the Change VDN Skill Preferences window.

- 5. In the **VDN(s):** field, enter the VDN for which skill preferences are to be changed.
- 6. From the Actions menu, select Find one.

The status bar displays a successful message if the VDN was found.

- 7. Enter skill preferences for the VDN in the **1st:**, **2nd:**, and **3rd:** fields using one of the following methods:
 - Enter the skill name or number.
 - Select the skill name or number from the drop-down list.
 - Use the Browse button at the right of each field to select a skill.
- 8. Select Actions > Modify.

The status bar displays a successful message when the operation completes.

Viewing VDN skill preferences

This section provides the procedure for viewing skill preferences for a VDN. This feature is only available on Communication Manager systems with the Expert Agent Selection (EAS) feature.

Steps

To view one or more existing VDN skill preferences:

1. From the Controller Window, select **Commands** > **Call Center Administration**.

Supervisor displays the Call Center Administration window.

- 2. In the ACD: field, select the ACD on which VDN skill preferences will be viewed.
- 3. In the **Operations:** list, highlight **Change VDN Skill Preferences**.
- 4. Select OK.

Supervisor displays the Change VDN Skill Preferences window.

- 5. In the VDN(s): field, enter the VDN for which skill preferences are to be viewed.
- 6. From the Actions menu, select Find one.

The status bar displays a successful message if the VDN was found and lists the skill preferences, if any exist for this VDN.

Listing all VDN skill preferences

This section provides the procedure for listing all skill preferences for a VDN. This feature is only available on switches with the Expert Agent Selection (EAS) feature.

Steps

To list all VDN skill preferences:

1. From the Controller Window, select **Commands** > **Call Center Administration**.

Supervisor displays the Call Center Administration window.

- 2. In the **ACD:** field, select the ACD on which the VDNs and their skill preferences will be viewed.
- 3. In the **Operations:** list, highlight **Change VDN Skill Preferences**.
- 4. Select **OK**.

Supervisor displays the Change VDN Skill Preferences window.

5. Select **Actions** > **List all**.

Supervisor displays a window listing all VDNs on this ACD and the associated skill preferences.

Split/skill call profiles

Call profiles are settings for a split or skill that assist in determining how much time passes before a call is answered or abandoned. The accumulated number of seconds that have passed for an unanswered call are divided into different service-level increments. If a call surpasses the time that is allowed for the first service-level increment, it then moves to the next service-level increment. This information is recorded for each call and can later be viewed through the split/ skill call profile report to determine the number of calls that were answered or abandoned in each increment.

This section contains the following topics:

- Before you begin on page 175
- Permissions on page 176
- Adding split/skill call profiles on page 176
- <u>Viewing an existing split/skill call profile</u> on page 177
- Modifying a split/skill call profile on page 178
- Deleting a split/skill call profile on page 179

Before you begin

The following items should be read and understood before working with split/skill call profiles:

- Each service-level increment value can be set to a different length of time in seconds.
- Each of the first nine service-level increments can have a different time length and represents a unit of wait time. The number of seconds for the second through the ninth increment must be at least 1 second greater than the number of seconds in the previous increment.
- *CMS* counts the calls that are either answered or abandoned within each increment and shows the totals on split/skill call profile reports. Therefore, the settings of these increments affect what is displayed in reports.
- Making changes to the service level field after data was collected with a different service level value causes reports to give inaccurate data for the **Percent within Service Level** value. If you must change the service level, it is best to change the value at midnight on the first day of a month so that data for the entire month is gathered using the same service level value.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view split/skill call profiles, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem and all affected splits and skills.
- To add, delete, or change a split/skill call profile, the user ID used to log in to this *Supervisor* session requires *write* permission for the Call Center Administration subsystem and all affected splits and skills.

Adding split/skill call profiles

The section provides the procedure for adding a split/skill call profile.

Steps

To add a split/skill call profile:

- From the Controller Window, select Commands > Call Center Administration Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD on which the new split/skill call profile will be created.
- 3. In the **Operations:** list, highlight **Split/Skill Call Profile Setup**.
- 4. Select OK.

Supervisor displays the Split/Skill Call Profile Setup window.

5. In the **Split(s)/Skill(s):** field, enter the split or skill numbers or names.

6. In the Acceptable service level: field, enter the objective speed of answer for the splits or skills. This field represents the number of seconds for the speed of answer and can accept values from 0 to 9999. This value should be no larger than the number of seconds in the intrahour interval that is set on CMS. For example, 1800 for a half-hour intrahour interval or 3600 for an hour-long intrahour interval. You must enter a value in this field.

The following example displays how an administrator might set up a split/skill call profile:

Acceptable service level: 1800						
Service level increments (seconds):						
Inc 1	Inc 2	Inc 3	Inc 4	Inc 5		
0 to	5 to 1	5 to 🗌	30 to	60 to 90		
lnc6 to∫	Inc 7	Inc 8 30 to	Inc 9 240 to	Inc 10 360 and above		

The **Acceptable service level:** field, has been set to **1800** seconds to correspond with the intrahour interval on the *CMS* server.

Inc 1 has been set for the range of 0 to 5 seconds. **Inc 2** ranges covers 5 to 15 seconds. The other service level increments continue on until **Inc 10**. This last service level increment is used in this example is for those calls that extend beyond 360 seconds. If a call is not addressed after the acceptable service level of 1800 seconds, the call is then tracked in a different *CMS* database category.

7. In the **Service level increments (seconds):** fields, enter a progressively greater number of seconds in each **to** field. Each field can support values from 0 to 999.

If the unanswered call surpasses the time limit for an increment, it moves on to the next increment. For example, 0 to 5 to 10 to 25 represents 0 to 5 seconds, 6 to 10 seconds, and 11 to 25 seconds.

Each of the nine increments can vary in length, for example, 0 to 15, 16 to 20, 21 to 26, 27 to 38, 39 to 43, and so forth.

If these fields are not supplied with data, 0 is used for all service level increments and all calls appear in the first increment on the split/skill call profile report.

8. Select **Actions** > **Add**.

The status bar displays a message stating if the operation succeeded or failed.

Viewing an existing split/skill call profile

This section provides the procedure for viewing a split/skill call profile that already exists.

Steps

To view an existing split/skill call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD:** field, select the ACD on which the existing split/skill call profile resides.
- 3. In the **Operations:** list, highlight **Split/Skill Call Profile Setup**.
- 4. Select **OK**.

Supervisor displays the Split/Skill Call Profile Setup window.

- 5. In the **Split(s)/Skill(s):** field, enter the split or skill that is represented by the call profile to view.
- 6. From the Actions menu, select Find One.

The status bar displays a **Successful** message if the call profile for the specified split or skill is found. Additionally, *Supervisor* populates the **Service Level Increments** (seconds): fields with the service level increments for this call profile.

Modifying a split/skill call profile

This section provides the procedure for modifying a call profile for a split or skill.

Steps

To modify a split/skill call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD:** field, select the ACD on which the split/skill call profile to modify resides.
- 3. In the **Operations:** list, highlight **Split/Skill Call Profile Setup**.
- 4. Select OK.

Supervisor displays the Split/Skill Call Profile Setup window.

- 5. In the **Split(s)/Skill(s):** field, enter the split or skill on which the call profile to modify resides.
- 6. From the Actions menu, select Find One.

The status bar displays a **Successful** message if the call profile for the specified split or skill is found. Additionally, *Supervisor* populates the **Service Level Increments** (seconds): fields with the service level increments for this call profile.

7. Enter the new values in the Acceptable service level: or the Service level increments (seconds): fields.

8. From the Actions menu, select Modify.

The status bar displays a **Successful** message when the operation completes.

Deleting a split/skill call profile

This section provides the procedure for deleting a split/skill call profile.

Steps

To delete an existing split/skill call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD on which the split/skill call profile to delete resides.
- 3. In the **Operations:** list, highlight **Split/Skill Call Profile Setup**.

Supervisor displays the Split/Skill Call Profile Setup window.

- 4. In the **Split(s)/Skill(s):** field, enter the split or skill on which the call profile to delete resides.
- 5. From the Actions menu, select Find One.

The status bar displays a **Successful** message if the call profile for the specified split or skill is found. Additionally, *Supervisor* populates the **Service Level Increments** (seconds): fields with the service level increments for this call profile.

6. From the Actions menu, select Delete.

Supervisor deletes the specified split/skill call profile and displays a **Successful** message in the status bar.

Trunk group assignments

A *trunk group* is a group of circuits that are assigned the same dialing digits, either a telephone number or a Direct-Inward-Dialing (DID) prefix. Trunk groups can be assigned to Vector Directory Numbers (VDNs) or non-vector-controlled splits.

This section contains the following topics:

- Before you begin on page 180
- <u>Permissions</u> on page 180
- Viewing all trunk group assignments on page 180

- <u>Viewing a single trunk group assignment</u> on page 181
- Viewing a trunk group assignment by VDN or split on page 181

Before you begin

The following items should be read and understood before working with trunk group assignments:

- Automatic-in trunk groups, such as those that are used as Listed Directory Numbers, must be assigned to VDNs or splits through an administration tool for the Communication Manager system.
- DID or dial-repeating trunks, such as those that toll-free numbers are assigned to, are not assigned to VDNs or splits since the Central Office (CO) passes VDN digits or the split extension number to the Communication Manager system. Because of this, toll-free numbers do not appear during these procedures.
- Vector-controlled splits cannot have trunk groups assigned to them because they can only receive calls through vector processing.
- The **Trunk Group Assign** window used in these procedures cannot be used to change trunk group assignments. Changing trunk group assignments is done through an administration tool for the Communication Manager system.

Permissions

To view trunk group assignments, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem and for all affected trunk groups, splits, and VDNs.

Viewing all trunk group assignments

This section provides the procedure for viewing all trunk group assignments.

Steps

To view all trunk group assignments:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD:** field, select the ACD on which trunk group assignments are to be viewed.
- 3. In the **Operations:** list, highlight **Trunk Group Assignments**.

4. Select **OK**.

Supervisor displays the Trunk Group Assign window.

5. With all fields blank, select **Actions** > **List All**.

Supervisor displays the **Trunk Group Assignments - List All** window showing all trunk groups and their current assignments.

To clear all fields of information, select **Edit** > **Clear all**.

Viewing a single trunk group assignment

This section provides the procedure for viewing the assigned VDN or split for a single trunk group.

Steps

To view the assigned VDN or split for a single trunk group:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD**: field, select the ACD for which trunk group assignments are to be viewed.
- 3. In the **Operations:** list, highlight **Trunk Group Assignments**.
- 4. Select **OK**.

Supervisor displays the Call Center Admin: Trunk Group Assign window.

- 5. In the **Trunk Groups:** field, enter the trunk group for which assignments are to be viewed. More than one trunk group can be entered in this field. Multiple trunk groups must be separated with a semicolon (;).
- 6. Select **Actions > Find One**.

The VDN or split assignment for the specified trunk group is displayed in the corresponding field.

If a VDN or split is not assigned to this trunk group, the status bar displays **0 matches found**.

Viewing a trunk group assignment by VDN or split

This section provides the procedure for viewing the trunk group that is assigned to a specific VDN or split.

Steps

To view the trunk group that is assigned to a VDN or skill:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD:** field, select the ACD for which trunk group assignments are to be viewed.
- 3. In the **Operations:** list, highlight **Trunk Group Assignments**.
- 4. Select OK.

Supervisor displays the Trunk Group Assign window.

- 5. Either a VDN or split can be specified to display the trunk group or groups assigned to it.
 - To display the trunk groups that are assigned to a VDN:
 - 1. In the **Select one:** group, select **VDN:**.
 - 2. Enter the VDN number or name in the field for the **VDN**: option.
 - To display the trunk groups that are assigned to a split:
 - 1. In the **Select one:** group, select **Split:**.
 - 2. Enter the split number or name in the field for the **Split:** option.
- 6. Select Actions > Find one.

Supervisor displays the first trunk group that is assigned to the specified VDN or split in the **Trunk Groups:** field. If more trunk groups are currently assigned, click the **Next** button to view them.

Trunk group members report

The trunk group members report is used to view the equipment locations of all the trunks that are in a particular trunk group. The report lists the selected trunk groups in numerical order, each trunk group's assigned name, and the equipment location of each trunk in the trunk group. If the trunk group does not have an assigned name, the **Trunk Group Name** field shows the trunk group number. Also, if the trunk group has no trunks assigned to it, the equipment location field is blank.

This section includes the following topics:

- <u>Before you begin</u> on page 183
- Permissions on page 183
- Running a trunk group members report on page 183

Before you begin

The following items should be read and understood before working with the trunk group members report:

- Custom or designer reports cannot be created from the trunk group members report.
- The link to the Communication Manager system must be active in order to run this report.

Permissions

To run a trunk group members report, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem and all affected trunk groups.

Running a trunk group members report

To run a trunk group members report:

- From the Controller Window, select Commands > Call Center Administration Supervisor displays the Call Center Administration window.
- 2. On the Call Center Administration window, select the Reports tab.
- 3. In the **ACD:** field, select the ACD for which the report will run.
- 4. In the **Reports:** list, highlight **Trunk Group Members**.
- 5. Select OK.

Supervisor displays the Trunk Group Members window.

6. In the **Trunk Groups:** field, enter the numbers or names of the trunk groups that are to be used in the report.

Multiple trunk groups must be separated by a semicolon (;).

- 7. In the **Destination** group, select the output option of the report:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** Sends the report to the printer that is specified in the associated field. To change the specified printer, select the **Select printer** button located on the right side of this group.
- 8. Select OK.

Supervisor runs the report and sends it to the specified destination.

VDN-to-vector assignments

A Vector Directory Number (VDN) is an extension number that enables incoming calls to be connected to a vector for processing. The VDN by itself may be dialed to access the vector from any extension that is connected to the switch. Initial assignment of a VDN to a vector is done on the Communication Manager system, but can later be changed using *CMS* or *Supervisor*.

This section contains the following procedures:

- Before you begin on page 184
- <u>Permissions</u> on page 184
- <u>Viewing all VDN-to-vector assignments</u> on page 185
- Listing VDNs associated with a vector on page 185
- Modifying VDN-to-vector assignments on page 186

Before you begin

The following items should be read and understood before working with VDN-to-vector assignments:

- Changing any VDN-to-vector assignments can alter call processing
- Multiple VDNs can be assigned to the same vector.
- VDNs cannot be assigned to more than one vector.
- You cannot exit the VDN-to-vector assignment window until *Supervisor* receives a response to the requested change.
- Calls that are already in vector processing are not affected by a VDN-to-vector change.
- Changing the VDN-to-vector assignment affects the next call that enters the VDN.
- VDN-to-vector assignment changes that are scheduled should either be grouped together in a timetable or individually scheduled so that one assignment completes before the next assignment change request is scheduled.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To view VDN-to-vector assignments, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem and for all affected VDNs and vectors.

• To modify VDN-to-vector assignments, the user ID used to log in to this *Supervisor* session requires *write* permission for the Call Center Administration subsystem and for all affect VDNs and vectors.

Viewing all VDN-to-vector assignments

This section provides the procedure to view all VDN-to-vector assignments.

Steps

To view all current VDN-to-vector assignments:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD for which VDN-to-vector assignments are to be viewed.
- 3. In the **Operations:** list, highlight **VDN Assignments**.
- 4. Select OK.

Supervisor displays the VDN Assignments window.

5. Select **Actions** > **List all** from the menu bar.

Supervisor displays a secondary window that lists all VDNs for which this user ID has *read* permission.

Listing VDNs associated with a vector

This section provides the procedure for listing the VDNs that are associated with a specific vector.

Steps

To list the VDNs that are associated with a specific vector:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD on which the vector resides.
- 3. In the **Operations:** list, highlight **VDN Assignments**.
- 4. Select OK.

Supervisor displays the VDN Assignments window.

5. In the **Vector** field, enter the name or number of the vector.

6. Select **Actions** > **List all** from the menu bar.

Supervisor displays a secondary window that lists all VDNs assigned to the specified vector.

Modifying VDN-to-vector assignments

This section provides the procedure for modifying the current VDN-to-vector assignments. Remember that VDNs can only be assigned to vectors initially through administrative utilities that are available only on Communication Manager system.

Steps

To modify the assignment of a VDN to a vector:

1. From the Controller Window, select **Commands > Call Center Administration**.

Supervisor displays the Call Center Administration window.

- 2. In the ACD: field, select the ACD on which the VDNs and vectors reside.
- 3. In the **Operations:** list, highlight **VDN Assignments**.
- 4. Select OK.

Supervisor displays the VDN Assignments window.

- 5. In the **VDNs:** field, enter the name or number of the VDN that is to be reassigned.
- 6. Select Actions > Find one from the menu bar.

Supervisor displays the vector to which this VDN is currently assigned in the Vector: field.

- 7. In the Vector: field, enter the new vector for the specified VDN.
- 8. Select Actions > Modify from the menu bar.

The status bar displays a **Successful** message once the operation completes.

VDN call profiles

Call profiles are time ranges for a VDN that *CMS* uses to track how much time passes before a call is resolved by being answered, connected to a non-ACD destination, or abandoned. *CMS* refers to these time ranges as *service-level increments*. The accumulated number of seconds that pass for an unanswered call are divided into different service-level increments. If a call surpasses the time that is allowed for the first service-level increment, it then moves to the next service-level increment. This information is recorded for each call and can later be viewed through the VDN call profile reports to determine the number of calls that were addressed in each increment.

This section contains the following procedures:

- Before you begin on page 187
- <u>Permissions</u> on page 187
- Adding a VDN call profile on page 188
- Viewing an existing VDN call profile on page 189
- Modifying a VDN call profile on page 189
- Deleting a VDN call profile on page 190

Before you begin

The following items should be read and understood before work is done with VDN call profiles.

- When installed, *CMS* sets all service-level increments to 0 by default. This causes all calls to appear in the first increment on the VDN call profile report.
- Each service level can be set to different lengths of time.
- Service-level increments can only be used to categorize a call to a maximum limit of 999 seconds.
- The number of seconds for the second through the ninth increment must be at least 1 second greater than the number of seconds in the previous increment. For example, if the second increment covers the range of 5 to 10 seconds, the maximum value in the third increment must be set to 11 or greater.
- Making changes to the service level field after data was collected with another service level value causes reports to give inaccurate data for the **Percent within Service Level** value. If you must change the service level, it is best to change the value at midnight on the first day of a month so that data for the entire month is gathered using the same service level value.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view a VDN call profile, the user ID used to log in to this *Supervisor* session requires *read* permission for the Call Center Administration subsystem and all affected VDNs.
- To add, delete, or change a VDN call profile, the user ID used to log in to this *Supervisor* session requires *write* permission for the Call Center Administration subsystem and all affected VDNs.

Adding a VDN call profile

This section provides the procedure for adding a VDN call profile to an ACD.

Steps

To add a VDN call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD on which the VDN call profile will be added.
- 3. In the Operations: list, highlight VDN Call Profile Setup.
- 4. Select OK.

Supervisor displays the VDN Call Profile Setup window.

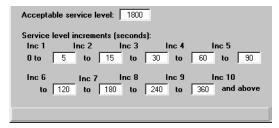

- 5. In the VDNs: field, enter the name or number of the VDN which will have a new call profile.
- 6. In the **Acceptable service level:** field, enter the maximum number of seconds in which a VDN call should be addressed.

This value can range from 0 to 3600. However, the value should be no larger than the number of seconds in the intrahour interval that is set on

CMS, for example, 1800 for a half-hour intrahour interval or 3600 for an hour-long intrahour interval.

7. In each **Service level increments (seconds):** field, enter a progressively larger number of seconds in each **to** field.

The following example shows how an administrator might set up a VDN call profile:

The **Acceptable service level:** field, is set to 1800 seconds to correspond with the intrahour interval that is used on the *CMS* server.

Inc 1 is set to a range of 0 to 5 seconds. **Inc 2** ranges is set to a range of 5 to 15 seconds. If the call is not resolved, *CMS* continues to process the call through the other service-level increments until **Inc 10**. The **Inc 10** service-level increment is used in this example for those calls that extend beyond 360 seconds. If a call is not addressed after the acceptable service level of 1800 seconds, the call is then tracked in a different *CMS* database category.

8. Select Actions > Add from the menu bar.

The status bar displays a **Successful** message when the operation completes.

Viewing an existing VDN call profile

This section provides the procedure for viewing a VDN call profile that already exists on an ACD.

Steps

To view an existing VDN call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD on which the VDN call profile will be added.
- 3. In the Operations: list, highlight VDN Call Profile Setup.
- 4. Select OK.

Supervisor displays the VDN Call Profile Setup window.

- 5. In the **VDNs:** field, enter the name or number of the VDN for which the associated call profile is to be viewed.
- 6. Select **Actions > Find one** from the menu bar.

Supervisor populates the remaining fields on the **VDN Call Profile Setup** window with the call profile settings for this VDN. If no call profile has been created for this VDN, the **Service level increments (seconds):** values are set to 0.

Modifying a VDN call profile

This section provides the procedure for modifying a VDN call profile that already exists on an ACD.

Steps

To modifying an existing VDN call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the **ACD**: field, select the ACD on which the VDN call profile will be modified.
- 3. In the **Operations:** list, highlight **VDN Call Profile Setup**.

4. Select **OK**.

Supervisor displays the VDN Call Profile Setup window.

- 5. In the **VDNs:** field, enter the name or number of the VDN for which the associated call profile is to be modified.
- 6. Select **Actions** > **Find one** from the menu bar.

Supervisor populates the remaining fields on the **VDN Call Profile Setup** window with the call profile settings for this VDN. If no call profile has been created for this VDN, the **Service level increments (seconds):** values are set to 0.

- 7. Enter new values in the appropriate fields:
 - Enter a new value in the **Acceptable service level** field to match the intrahour interval that is set on the *CMS* server.
 - Enter new ranges of time in the **Service level increments (seconds):** fields as needed.
- 8. Select Actions > Modify from the menu bar.

The status bar displays a **Successful** message when the operation completes.

Deleting a VDN call profile

This section provides the procedure for deleting an existing VDN call profile on an ACD.

Steps

To delete an existing VDN call profile:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. In the ACD: field, select the ACD on which the VDN call profile will be deleted.
- 3. In the **Operations:** list, highlight **VDN Call Profile Setup**.
- 4. Select OK.

Supervisor displays the VDN Call Profile Setup window.

- 5. In the **VDNs:** field, enter the name or number of the VDN for which the associated call profile is to be deleted.
- 6. Select **Actions** > **Find one** from the menu bar.

Supervisor displays the call profile data for the selected VDN in the **Acceptable service level:** and **Service level increments (seconds):** fields.

7. Select **Actions > Delete** from the menu bar.

The status bar displays a **Successful** message when the operation completes.

Vector configuration report

Vector configuration reports display the following items that are associated with a vector:

- Trunk group
- Trunk group name
- VDN
- VDN name
- Vector
- Vector name
- 1st, 2nd, and 3rd skill preferences
- 1st, 2nd, and 3rd skill names

This section contains the following topics:

- Before you begin on page 191
- <u>Permissions</u> on page 192
- Running vector configuration reports on page 192

Before you begin

The following items should be read and understood before running vector configuration reports:

- A vector may appear in a report even if it is not associated with a trunk group or VDN.
- A vector may appear in a report even if it does not contain any steps.
- A custom or designer report cannot be created from a vector configuration report.
- A go to vector step can cause a trunk group or VDN to carry calls to another vector to which the VDN being used is not assigned. Trunk groups and VDNs that carry calls to a secondary vector in this manner do not appear in the vector configuration report for those secondary vectors.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

 To view a vector configuration report, the user ID used to log in to this Supervisor session requires read permission for the Call Center Administration subsystem and all vectors to be listed on the report. Permissions are not required for the trunk groups and VDNs that are associated with the specified vectors.

Running vector configuration reports

This section provides the procedure for running a vector configuration report.

Steps

To run a vector configuration report:

- From the Controller Window, select Commands > Call Center Administration.
 Supervisor displays the Call Center Administration window.
- 2. Select the **Reports** tab.
- 3. In the **ACD:** field, select the ACD containing the vector on which the report will be run.
- 4. In the **Reports** list, highlight **Vector Configuration**.
- 5. Select OK.

Supervisor displays the Vector window.

6. In the **Vectors:** field, enter the name or number of the vector for which the report will be run.

Multiple vectors can be entered in this field but must be separated by a semicolon (;).

- 7. In the **Destination** group, select the output option of the report:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** Sends the report to the printer that is specified in the associated field. To change the specified printer, select the **Select printer** button located on the right side of this group.
- 8. Select OK.

Supervisor runs the report and sends it to the specified destination.

Chapter 8: Administering exceptions

This section provides the procedures for administering exceptions, running the Real-time Exception Log report, and running other exception reports for the following exception areas:

- Agent
- Split/skill
- Trunk group
- VDN
- Vector
- Data Collection
- Malicious call trace
- Real-time exceptions log

This section contains the following topics:

- About exceptions on page 194
- <u>Before you begin</u> on page 196
- Permissions on page 197
- Exception notification on page 198
- Agent exceptions on page 198
- Split/skill exceptions on page 206
- Trunk group exceptions on page 211
- VDN exceptions on page 215
- <u>Vector exceptions</u> on page 221
- Real-time exceptions log on page 227
- Exception reports on page 228

About exceptions

An *exception* is a type of activity in the ACD that falls outside the limits that have been defined and could indicate unacceptable performance. Exceptions are gathered on agents, splits/skills, trunk groups, VDNs, vectors, and unusual events such as Malicious Call Trace and disruptions in data collection. This section describes the operations, prerequisites, and rules for administering exceptions and the different types of exception reports that are available.

You can administer exceptions and generate reports for VDNs and vectors if your company has purchased the Call Vectoring feature.

You can administer exceptions and generate reports for skills if your company has purchased the Expert Agent Selection (EAS) feature.

This section includes the following topics:

- Types of Exceptions on page 194
- Notification on page 195
- Exception capacities on page 196

Types of Exceptions

An exception can be one of three types:

- Peg count
- Agent timed
- Other timed exceptions

Peg count exceptions

A peg count exception occurs when the number of occurrences of an ACD activity exceeds an occurrence threshold that is defined for your contact center in the current interval.

The current interval is a set number of either 15, 30, or 60 minutes. Many *CMS* exceptions are measured based on this interval.

Most exception conditions apply to ACD events that occur within the current interval that is defined for your contact center. When the current interval changes, ACD event occurrences are cleared and *CMS* begins to count event occurrences again. Therefore, your exception conditions should realistically reflect what you want to trigger an exception within your current interval.

Agent timed exceptions

Agent timed exceptions are tracked from the time that the agent logs in until the agent logs out. These exceptions can occur many times during the login period and within an interval. The exception count is cleared when the agent leaves the state that triggered the exception.

For example, an agent timed exception could be configured to occur whenever an agent spends more than 5 minutes in the AUX work mode. Then, when an agent spends longer than 5 minutes in the AUX work mode, an exception is triggered for that agent. When the agent changes to another state, such as AVAIL, the exception is reset so that it can occur again when the agent reenters the AUX work mode.

Other timed exceptions

Other timed exceptions are triggered when the number of ACD activity occurrences exceeds the minimum or maximum time limits that are set for such activity.

For example, you may set the time limit at 20 seconds for any call to wait in queue before being answered. You may then define an occurrence boundary of three for the acceptable number of calls that can wait in the queue for 20 seconds. An exception occurs if more than three calls wait in the queue longer than 20 seconds within an interval.

Timed occurrence boundaries for this type of exception apply to ACD activity within the last interval. At the beginning of the next interval, the occurrence count for any timed exception type, except for agent timed exceptions, is cleared and starts again from zero. However, since the time limit for a timed exception type can be more than 1 hour, the duration of an exception activity is not cleared at the end of the intrahour interval. *CMS* continues to track the time that is spent on an exception activity that continues from one interval to the next for this type of exception.

Notification

The status bar of the *Supervisor* Controller window shows the current exception total for both the peg count and time exceptions. This exception total is for all of the ACDs for which you have permission to view exceptions. The exception count is cleared at the end of each interval and can display a maximum number of 9999.

The PC on which *Supervisor* is running is, by default, configured to beep each time an exception occurs. Changing this setting can be done by selecting **Options** > **General** on the *Supervisor* menu bar.

Exception capacities

CMS requires that you define the storage space on the server to record the activities of the contact center. The recording of exceptions also uses this storage space. The limits for recording exceptions are provided in the Avaya Aura[™] Communication Manager System Capacities Table document. The following items provide information on the way CMS handles recording of exceptions:

- CMS can store exception records of each element on all ACDs. There are exception records stored for elements like agents, split/skill, trunk groups, VDNs, and vectors across all ACDs.
- You can retrieve the stored exception records from ACDs. The exception retrieval capacity is the number of days in the past for which you can retrieve exceptions. This is determined by the following criteria:
 - The number of exception records that are allocated for storage in the Data Storage operation in the System Setup window.
 - The frequency with which exceptions are recorded each day. For example, if you
 allocate storage for 1000 exception records and approximately 100 exceptions occur
 each day, you can save exception records for nearly 10 days.

Before you begin

The following items should be read and understood before you begin working with exceptions:

• If an ACD Group is selected as the current ACD in the **Exceptions** window, only those operations that are valid for the ACD Group will appear in the **Operations:** list.

Rules for administering exceptions

When exception thresholds are configured, the following rules must be followed:

- The occurrence threshold for any exception must be between 0 to 999.
- The time limit for timed exceptions must be between 0 to 28800 seconds.
- If a time limit is entered for an activity, an occurrence threshold for that activity must also be entered.
- When an exception is made active, *CMS* starts checking for the exception immediately as long as data collection is activated.
- When at least one exception is added to an entity, any future additions must be made by using the **Modify** item on the **Action** menu.

- When exceptions are being modified, the **Find one** menu item should always be used to retrieve the current settings for the exception before any changes are made.
- The default setting for most exceptions is *off*. However, the following exceptions are always active and cannot be stopped:
 - Malicious call trace
 - Data collection disruptions
 - Audio difficulty
 - Agent attempts to log in with more than one login ID

Permissions

The following table describes the permission settings that are required in order for a user to access exception information:

Does the user have <i>read</i> permission for the Exceptions feature?	and exceptions permission for splits/skills, trunk groups, ACDs, vectors, and VDNs?	Then, the user can use the following exception information:
yes	yes	 Exception reports Messages in the Real-Time Exception Log Real-time notification of exceptions
yes	no	Exceptions reports
no	yes	Real-time notification of exceptions
no	no	 No exceptions features available to this user

Setting the exception permissions for these entities can be done through **Tools** > **User Permissions** on the *Supervisor* Controller window.

Other permissions

To set up or change the method in which the system checks for exceptions, the user ID used to log in to this *Supervisor* session requires the *write* permission for the Exceptions feature.

To be notified of a malicious call exception, the user ID used to log in to this *Supervisor* session requires the *exception* permission for the appropriate contact center entity.

Exception notification

An *exception notification* is a beep that is sounded by *Supervisor* when an exception is encountered. By default, this occurs when the user who is currently logged in to *Supervisor* has the *exceptions* permission for the entity on which the exception occurred. If you do not want *Supervisor* to beep when an exception occurs, follow the procedure in this section.

This section contains the following topic:

<u>Changing exception notification</u> on page 198

Changing exception notification

This section provides the procedure for changing whether the beep notification is sounded when an exception occurs.

Steps

To change the exception notification:

1. From the Controller window, select **Tools > Options**.

Supervisor displays the Options window.

- 2. Select the General tab.
- 3. Perform one of the following actions:
 - To activate exception notification, place a check mark in the **Use Sound** check box.
 - To turn off exception notification, remove the check mark in the Use Sound check box.
- 4. Select OK.

Agent exceptions

Agent exceptions can occur for many different activities in relation to an agent. These can include the amount of time on a call or in a work state, the number of calls that an agent has in queue, and other activities. This section provides the procedure for configuring if and when these exceptions are checked by *CMS*.

This section contains the following topics:

- Before you begin on page 199
- Permissions on page 199

- <u>Adding agent exceptions</u> on page 199
- Modifying agent exceptions on page 201
- <u>Deleting agent exceptions</u> on page 202
- <u>Agent exception definitions</u> on page 203

Before you begin

The following items should be read and understood before working with agent exceptions:

- Agent exceptions are assigned per split/skill and not for each agent. When an agent logs into a split/skill, any exceptions that are configured for that split/skill are applied to the agent.
- External outbound exceptions are a subset of outbound exceptions. If both types of exceptions are administered, the limit for external outbound covers external outbound calls and the limit for outbound covers only internal outbound calls.
- The agent exceptions record for a split/skill are not created by default in the CMS database when the split/skill is created. If a split/skill does not have agent exceptions, an **Add** action must be taken to create the associated agent exceptions record.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view agent exceptions, the user ID used to log in to this *Supervisor* session requires *read* permission for the Exceptions subsystem and all affected splits/skills as well as the *exceptions* permission for the affected splits/skills.
- To add, delete, or modify agent exceptions, the user ID used to log in to this *Supervisor* session requires *write* permission for the Exceptions subsystem and all affected split/skills as well as the *exceptions* permission for the affected splits/skills.

Adding agent exceptions

This section provides the procedure for adding agent exceptions for a split/skill.

Steps

To add agent exceptions for a split/skill:

1. From the Controller window, select **Commands** > **Exceptions** on the menu bar.

Supervisor displays the Exceptions window.

- 2. In the **ACD:** field, select the ACD for the split/skill where agent exceptions are to be created.
- 3. In the **Operations:** list, highlight **Agent Exceptions**.

Note:

If you need to add agent exceptions for AUX reason codes 10 through 99, select the appropriate operation:

- Agent Exceptions Reason Codes 0-49
- Agent Exceptions Reason Codes 50-99
- 4. Select OK.

Supervisor displays the Agent Exceptions Administration window.

This window appears with all fields blank when first opened.

Note:

This is a scrolling dialog box that contains more exceptions than those shown in the above graphic. Use the scroll bar on the right side of the dialog box to view the other exceptions.

5. In the **Split(s)/Skill(s):** field, enter the name or number of the split/skill for which an agent exceptions configuration is to be created.

The **Split(s)/Skill(s):** field can accept multiple entries. Each entry must be separated by a semicolon (;).

- 6. Perform the following actions in the specified fields for each **Exception Type** that you want to monitor:
 - Active Place a check mark in this check box to enable the exception and allow it to run and adhere to the parameters that are given in the other fields. Leaving this check box blank disables the exception and *CMS* will not attempt to track the activity for this exception.
 - Time Limit Enter the time limit in seconds (0 to 28800) for those exception types that
 use a time limit. This value is used as the minimum or maximum amount of time for an
 activity depending on the type of exception. If this limit is surpassed, CMS counts this
 activity and compares it against the Threshold field. This field requires an entry and
 cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0 to 999). Any occurrences beyond this number will generate an exception. If you want CMS to create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 7. When all necessary time limits and thresholds have been entered, select **Actions** > **Add** from the menu bar.

The exception configuration data will be saved for this split/skill and the status bar displays a **Successful** message.

Modifying agent exceptions

This section provides the procedure for modifying the existing agent exception configuration for a split/skill.

Steps

To modify an existing agent exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD**: field, select the ACD on which the split/skill to modify for agent exceptions resides.
- 3. In the **Operations:** list, highlight **Agent Exceptions**.

Note:

If you need to add agent exceptions for AUX reason codes 10 through 99, select the appropriate operation:

- Agent Exceptions Reason Codes 0-49
- Agent Exceptions Reason Codes 50-99
- 4. Select OK.

Supervisor displays the Agent Exceptions Administration window.

Note:

This is a scrolling dialog that contains more exceptions than those shown in the above graphic. Use the scroll bar on the right side of the dialog to view the other exceptions.

- 5. In the **Split(s)/Skill(s):** field, enter the name or number of the split/skill for which the agent exceptions configuration is to be modified.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the agent exception configuration for the specified split/skill and displays the data in the appropriate fields. If the exception configuration data cannot be found, the status bar displays **0 matches found**.

To return all splits/skills, leave the **Split(s)**:/**Skill(s)**: field blank before performing the **Find one** action. *Supervisor* will return all split(s)/skill(s) for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the splits/skills.

- 7. Perform the following actions in the specified fields for each **Exception Type** that you want to monitor:
 - Active Place a check mark in this check box to enable the exception and allow it to run and adhere to the parameters that are given in the other fields. Leaving this check

box blank disables the exception and *CMS* will not attempt to track the activity for this exception.

- **Time Limit** Enter the time limit in seconds (0 to 28800) for those exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity depending on the type of exception. If this limit is surpassed, *CMS* counts this activity and compares it against the **Threshold** field. This field requires an entry and cannot be left blank.
- **Threshold** Enter the number of acceptable occurrences of this activity (0 to 999). Any occurrences beyond this number will generate an exception. If you want *CMS* to create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 8. When all necessary time limits and thresholds have been modified, select **Actions** > **Modify** from the menu bar.

Supervisor updates the data for this split/skill and displays a **Successful** message in the status bar.

Deleting agent exceptions

This section provides the procedure for deleting the agent exceptions for a split/skill.

Steps

To delete agent exceptions:

1. From the Controller Window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the ACD: field, select the ACD on which the split/skill to delete resides.
- 3. In the **Operations:** list, highlight **Agent Exceptions**.

Note:

If you need to add agent exceptions for AUX reason codes 10 through 99, select the appropriate operation:

- Agent Exceptions Reason Codes 0-49
- Agent Exceptions Reason Codes 50-99
- 4. Select OK.

Supervisor displays the Agent Exceptions Administration window.

Note:

This is a scrolling dialog that contains more exceptions than those shown in the above graphic. Use the scroll bar on the right side of the dialog to view the other exceptions.

- 5. In the **Split(s)/Skill(s):** field, enter the name or number of the split/skill for which an agent exceptions configuration is to be deleted.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the agent exception configuration for the specified split/skill and displays the data in the appropriate fields. If exception configuration data cannot be found, the status bar displays **0 matches found**.

To return all splits/skills, leave the **Split(s)**:/**Skill(s)**: field blank before performing the **Find one** action. *Supervisor* will return all split(s)/skill(s) for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the splits/skills.

7. From the menu bar, select **Actions > Delete**.

Supervisor deletes the agent exception configuration for this split/skill from the *CMS* database and displays a **Successful** message in the status bar.

Agent exception definitions

The following table provides the definitions for the different agent exceptions:

Exception	Definition
Time available	The time that an agent spends in AVAIL (this is idle time).
Time on inbound ACD call (minimum)	The minimum time that an agent spends on an ACD call.
Time on inbound ACD call (maximum)	The maximum time that an agent spends on an ACD call.
Time in after-call work (maximum)	The maximum time that an agent spends on after-call work.
Time on inbound ACW call (maximum)	The maximum time that an agent spends on an inbound call during after-call work.
Number of inbound ACW calls/agent	The total number of inbound calls that an agent can receive during after-call work. This exception can only be triggered once per interval.
Time on outbound ACW call (maximum)	The maximum time that an agent spends on an outbound call during after-call work.
Number of outbound ACW calls/agent	The total number of outbound calls that an agent can make during after-call work. This exception can only be triggered once per interval.

Time in AUX work (maximum)	The maximum time that an agent spends doing auxiliary work.
Time on inbound AUX call	The maximum time that an agent spends on an inbound call during auxiliary work.
Number of inbound AUX calls/agent	The total number of inbound calls that an agent can receive during auxiliary work. This exception can only be triggered once per interval.
Time on outbound AUX call (maximum)	The maximum time that an agent spends on an outbound call during auxiliary work.
Number of outbound AUX calls/agent	The total number of outbound calls that an agent can place during auxiliary work. This exception can only be triggered once per interval.
Time in AUX with Reason Code X (maximum)	The maximum time that agents can spend doing auxiliary work with Reason Code X (X is from 0 to 9 or 0 to 99).
Login Identification	Select Active to receive a notification of a login violation. A violation occurs when an agent attempts to log in with an ID that is not in the Dictionary or if an agent tries to log in with more than one ID at the same terminal. If you deactivate this exception, you are not notified if an agent logs in with an ID that is not in the Dictionary, but you still are notified if an agent tries to log in with more than one ID.
Time on outbound ACD call (minimum)	The minimum time that an agent spends on an outbound ACD call.
Time on outbound ACD call (maximum)	The maximum time that an agent spends on an outbound ACD call.
Number calls transferred	The maximum number of calls that an agent can transfer.
Time ACD call spent on hold (maximum)	The maximum time that an agent can put an ACD call on hold. This time value is cumulative for each call. If an agent removes a call from hold and places it back on hold again, this value is not reset.
Number ACD calls placed on hold (maximum)	The maximum number of ACD calls that an agent can put on hold. This exception can only be triggered once per interval.
Number ACD calls abandoned while on hold (maximum)	The maximum number of calls that are abandoned after being put on hold by an agent. This exception can only be triggered once per interval.
Time ACD call spends ringing (maximum)	The maximum time that a split/skill or direct agent ACD call can ring at agent's voice terminal before an exception is triggered.

Select Active to be notified when an agent lets an ACD call ring at the voice terminal long enough for the switch to automatically redirect the call. You must have the Redirection on No Answer feature activated on the Communication Manager system to use this exception.
The maximum number of seconds that an agent spends on a direct agent ACD call.
The maximum number of direct agent ACD calls that an agent can have waiting in queue.
The maximum time that any call waits in the direct agent queue.
The maximum number of direct agent ACD calls that can leave the direct agent queue by abandoning before an exception is triggered. This exception can only be triggered once per interval.
The maximum number of direct agent calls that outflow from the direct agent queue. This exception can only be triggered once per interval.
The maximum number of seconds that an agent spends on an external outbound call during after-call work.
The maximum number of external outbound calls that an agent can make while in after-call work. This exception can only be triggered once per interval.
The maximum number of seconds an agent spends on an external outbound call during auxiliary work.
The maximum number of external outbound calls that an agent can make during auxiliary work. This exception can only be triggered once per interval.
Select Active to be notified when an agent logs out with active or held calls on the voice terminal.
The acceptable number of times that an agent can enter an invalid reason code when trying to log out. This exception can only be triggered once per interval.
The acceptable number of times that an agent can enter an invalid AUX reason code. This exception can only be triggered once per interval.
An exception that is pegged for CWC 0 (an agent types an unadministered call work code). This exception should be turned off if you are collecting call work codes in call records only.

Split/skill exceptions

Using split/skill exceptions can help identify those splits/skills that need to be adjusted to achieve more efficiency in the contact center.

Split/skill exceptions can assist you in the identification of problems in the following areas:

- The length of time that calls wait for different handling options
- The number of calls that are directed through different handling options
- The average speed with which the calls are being answered

This section contains the following topics:

- Before you begin on page 206
- <u>Permissions</u> on page 206
- Adding split/skill exceptions on page 207
- Modifying split/skill exceptions on page 207
- <u>Deleting split/skill exceptions</u> on page 209
- <u>Split/skill exception definitions</u> on page 209

Before you begin

The following items should be read and understood before working with split/skill exceptions:

- To administer exceptions for *skills*, your company must have purchased Expert Agent Selection (EAS). However, this feature is not needed to administer exceptions for *splits*.
- The split/skill exceptions configuration is not created by default in the *CMS* database when the split/skill is created. If a split/skill does not have an exceptions configuration, an **Add** action must be taken to create it.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view split/skill exceptions, the user ID used to log in to this Supervisor session requires read permission for the Exceptions subsystem and all affected splits/skills as well as the exceptions permission for all affected splits/skills.
- To add, delete, or modify split/skill exceptions, the user ID used to log in to this Supervisor session requires write permission for the Exceptions subsystem and all affected splits/ skills as well as the exceptions permission for all affected splits/skills

Adding split/skill exceptions

This section provides the procedure for adding split/skill exception configurations.

Steps

To add a split/skill exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD:** field, select the ACD that contains the split/skill to receive the new exception configuration.
- 3. In the **Operations:** list, highlight **Split/Skill Exceptions**.
- 4. Select OK.

Supervisor displays the Split/Skill Exception Administration window.

- 5. In the **Split(s)/Skill(s):** field, enter the name or number of the split/skill for which an exceptions configuration is to be created.
- 6. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, *CMS* will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 7. When all necessary time limits and thresholds have been entered, select **Actions > Add** from the menu bar.

Supervisor saves the data for this split/skill and the status bar displays a **Successful** message.

Modifying split/skill exceptions

This section provides the procedure for modifying existing split/skill exception configurations.

Steps

To modify a split/skill exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD:** field, select the ACD that contains the split/skill and its exception configuration.
- 3. In the **Operations:** list, highlight **Split/Skill Exceptions**.
- 4. Select OK.

Supervisor displays the Split/Skill Exception Administration window.

- 5. In the **Split(s)/Skill(s):** field, enter the name or number of the split/skill for which its exceptions configuration is to be modified.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the exception configuration for the specified split/skill and the displays the data in the appropriate fields. If exception configuration data cannot be found, the status bar displays **0 matches found**.

To have all splits/skills returned in this step, leave the **Split(s):/Skill(s):** field blank before performing the **Find one** action. *Supervisor* will return all split(s)/skill(s) for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the splits/skills.

- 7. Make the necessary changes in the following fields for each **Exception Type** that requires modification:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, *CMS* will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 8. When all necessary time limits and thresholds have been entered, select **Actions** > **Modify** from the menu bar.

Supervisor saves the data for this split/skill and the status bar displays a **Successful** message.

Deleting split/skill exceptions

This section provides the procedure for deleting existing split/skill exception configurations.

Steps

To delete a split/skill exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the **Exceptions** window.

- 2. In the **ACD:** field, select the ACD that contains the split/skill and its exception configuration.
- 3. In the **Operations:** list, highlight **Split/Skill Exceptions**.
- 4. Select OK.

Supervisor displays the Split/Skill Exception Administration window.

- 5. In the **Split(s)/Skill(s):** field, enter the name or number of the split/skill for which the exception configuration is to be deleted.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the exception configuration for the specified split/skill and the displays the data in the appropriate fields. If exception configuration data cannot be found, the status bar displays **0 matches found**.

To have all splits/skills returned in this step, leave the **Split(s):/Skill(s):** field blank before performing the **Find one** action. *Supervisor* will return all split(s)/skill(s) for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the splits/skills.

7. From the menu bar, select **Actions > Delete**.

Supervisor deletes the exception configuration for this split/skill from the *CMS* database and a displays a **Successful** message in the status bar.

Split/skill exception definitions

The following table provides the definitions for the different split/skill exceptions:

In this field	Enter this value
Time call has waited in queue	The total acceptable amount of time any call in queue remains unanswered before an occurrence is counted against the threshold limit.

Number calls waiting	The maximum number of calls waiting in queue at any one time.
Number calls abandoned	The total number of acceptable abandoned calls. This exception can only be triggered once per interval.
Average speed of answer (seconds)	The maximum acceptable amount of time in seconds that a call waits in that split/skill queue before an agent answers. This exception can only be triggered once per interval.
Number intraflowed-out calls	The maximum acceptable number of calls that intraflow out from or in to a split or skill. This exception can only be triggered once per interval.
Number intraflowed-in calls	The acceptable number of calls that can intraflow in to the split or skill before an occurrence is counted against the threshold limit. This exception can only be triggered once per interval.
Number interflowed-out calls	The acceptable number of calls that can interflow out of the split or skill. This exception can only be triggered once per interval.
Number calls handled as backup	The acceptable number of calls that this split or skill can handle as a backup for another split or skill. This exception can only be triggered once per interval.
Number calls transferred	The acceptable number of calls that can be transferred from this split or skill. This exception can only be triggered once per interval.
Number calls offered while queue full	The acceptable number of calls that can be offered to the split or skill while the queue is full. This exception can only be triggered once per interval.
Expected Wait Time (pri Top) exceeds threshold	The maximum acceptable time in seconds that a call is expected to wait at Top priority before connecting to an agent. This exception can only be triggered once per interval.
Expected Wait Time (pri High) exceeds threshold	The maximum acceptable time in seconds that a call is expected to wait at High priority before connecting to an agent. This exception can only be triggered once per interval.
Expected Wait Time (pri Medium) exceeds threshold	The maximum acceptable time in seconds that a call is expected to wait at Med priority before connecting to an agent. This exception can only be triggered once per interval.

Expected Wait Time (pri Low)	The maximum acceptable time in seconds that a call is expected to wait at Low priority before connecting to an agent. This exception can only be triggered once per interval.
Rolling Average Speed of Answer	The maximum acceptable amount of time in seconds that is calculated for the rolling average speed of answer (ASA) for a split/skill. This exception can only be triggered once per interval. The ASA for the measured split/skill is sent to <i>CMS</i> by way of the ASA message. An occurrence is counted (in seconds) when <i>CMS</i> receives an ASA that exceeds the time limit that is specified for a split/skill. An exception is triggered when the threshold is exceeded.

Trunk group exceptions

Trunk group exceptions are used to identify performance and capacity issues for the trunk groups in the contact center.

This section contains the following topics:

- Before you begin on page 211
- <u>Permissions</u> on page 212
- Adding trunk group exceptions on page 212
- Modifying trunk group exceptions on page 213
- Deleting trunk group exceptions on page 214
- Trunk group exception definitions on page 215

Before you begin

The following items should be read and understood before working with trunk group exceptions:

• An Audio Difficulty exception is associated with each trunk group. This exception is always provided for all Communication Manager systems that support event counts and it cannot be disabled. For this reason, this exception is not available on the **Trunk Group Exception Administration** window.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view trunk group exceptions, the user ID used to log in to this *Supervisor* session requires *read* permission for the Exceptions subsystem and all affected trunk groups as well as the *exceptions* permission for all affected trunk groups.
- To add, delete, or change trunk group exceptions, the user ID used to log in to this *Supervisor* session requires *write* permission for the Exceptions subsystem and all affected trunk groups as well as the *exceptions* permission for all affected trunk groups.

Adding trunk group exceptions

This section provides the procedure for adding an exception configuration for a trunk group.

Steps

To add exceptions for a trunk group:

1. From the Controller Window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD:** field, select the ACD for the trunk group that will receive the new exceptions configuration.
- 3. In the **Operations:** list, highlight **Trunk Group Exceptions**.
- 4. Select OK.

Supervisor displays the Trunk Group Exception Administration window.

- 5. In the **Trunk groups:** field, enter the name or number of the trunk group for which an exceptions configuration is to be created.
- 6. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, *CMS* will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an

exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.

7. When all necessary time limits and thresholds have been entered, select **Actions** > **Add** from the menu bar.

Supervisor saves the data for this trunk group and the status bar displays a **Successful** message.

Modifying trunk group exceptions

This section provides the procedure for modifying an existing exception configuration for a trunk group.

Steps

To modify trunk group exceptions:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD**: field, select the ACD that contains the trunk group and its exception configuration.
- 3. In the **Operations:** list, highlight **Trunk Group Exceptions**.
- 4. Select OK.

Supervisor displays the Trunk Group Exception Administration window.

- 5. In the **Trunk groups:** field, enter the name or number of the trunk group for which exception configuration is to be modified.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the exception configuration data for the specified trunk group and displays it in the appropriate fields. If data cannot be found for this trunk group, the status bar displays **0 matches found**.

To return all trunk groups, leave the **Trunk groups:** field blank before performing the **Find one** action. *Supervisor* will return all trunk groups for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the trunk groups.

- 7. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.

- **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, *CMS* will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
- **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 8. When all necessary time limits and thresholds have been entered, select **Actions** > **Modify** from the menu bar.

Supervisor updates the data for this trunk group and the status bar displays a **Successful** message.

Deleting trunk group exceptions

This section provides the procedure for deleting existing trunk group exception configurations.

Steps

To delete a trunk group exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD**: field, select the ACD that contains the trunk group and its exception configuration.
- 3. In the **Operations:** list, highlight **Trunk Group Exceptions**.
- 4. Select OK.

Supervisor displays the Trunk Group Exception Administration window.

- 5. In the **Trunk groups:** field, enter the name or number of the trunk group for which the exception configuration is to be deleted.
- 6. From the menu bar, select **Actions > Find one**.

The exception configuration is found for the specified trunk group and the data displays in the appropriate fields. If exception configuration data cannot be found, the status bar will display **0 matches found**.

To return all trunk groups, leave the **Trunk groups:** field blank before performing the **Find one** action. *Supervisor* will return all trunk groups for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the trunk groups. 7. From the menu bar, select **Actions > Delete**.

The exception configuration for this trunk group is deleted from the *CMS* database and a **Successful** message displays in the status bar.

Trunk group exception definitions

The following table provides the definitions for the different trunk group exceptions:

In this field	Enter this value
Time trunk in use (minimum)	The minimum acceptable time in seconds that a trunk in the trunk group can be in use. This exception can only be triggered once per interval for the same trunk.
Time trunk in use (maximum)	The maximum acceptable time in seconds that a trunk in the trunk group can be in use. This exception can only be triggered once per interval for the same trunk.
Time any trunk maintenance busy	The maximum acceptable time in seconds that a trunk in the trunk group can be in the maintenance busy state.
Length of time all trunks busy	The maximum acceptable time that all trunks in the trunk group can be busy at once. This exception can only be triggered once per interval.
Number of trunks in use	The maximum acceptable number of trunks that can be in use at the same time in the trunk group. An exception is reached each time the allowed number of trunks in use exceeds the threshold within the interval.
Number of trunks maintenance busy	The maximum acceptable number of trunks that can be in the maintenance busy state in the trunk group. An exception is reached each time the allowed number of trunk that are in the maintenance busy state exceeds the threshold within the interval.

VDN exceptions

Use Vector Directory Number (VDN) exceptions to assist in the identification of problems in the following areas:

- The amount of time calls that remain in the vector or at an agent
- The number of calls that reach specific states, such as disconnected, busy, and abandoned

• The number of calls that are routed in or out of the VDN and if they are successful

This section contains the following topics:

- Before you begin on page 216
- <u>Permissions</u> on page 216
- Adding VDN exceptions on page 217
- <u>Modifying VDN exceptions</u> on page 218
- <u>Deleting VDN exceptions</u> on page 219
- VDN exception definitions on page 220

Before you begin

The following items should be read and understood before working with VDN exceptions:

- To administer VDN exceptions, your company must have purchased and installed the Call Vectoring feature.
- Because of the routing that is permitted by the go to vector command, the **Time in** vector exception may include the time that a call spends in more than one vector.
- *CMS* begins to monitor for VDN exceptions when a call connects to the VDN and stops when the call is disconnected, sent to another VDN, sent to an external destination, or transferred. The call remains connected to the VDN if one of the following circumstances is encountered:
 - The call routes to another vector through a go to vector step.
 - The call is sent through a route to or adjunct routing step to a non-VDN extension that is internal to the local Communication Manager system.
- If a large number of VDNs exist in the Dictionary (over 2000), there can be lengthy waiting periods when you browse for VDNs through *Supervisor*.
- Some exception types require that an appropriate step exists in the vector to which the VDN is assigned. For example, to get exceptions on unsuccessful Look Ahead Interflow attempts, the vector for the VDN must have at least one route to step that routes calls to a vector on a remote switch.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To view VDN exceptions, the user ID used to log in to this *Supervisor* session requires *read* permission for the Exceptions subsystem and all affected VDNs as well as the *exceptions* permission for all affected VDNs.

• To add, delete, or change VDN exceptions, the user ID used to log in to this *Supervisor* session requires *write* permission for the Exceptions subsystem and all affected VDNs as well as the *exceptions* permissions for all affected VDNs.

Adding VDN exceptions

This section provides the procedure for adding an exceptions configuration to a VDN.

Steps

To add an exceptions configuration to a VDN:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD**: field, select the ACD that contains the VDN that will receive the new exceptions configuration.
- 3. In the **Operations:** list, highlight **VDN Exceptions**.
- 4. Select OK.

Supervisor displays the VDN Exception Administration window.

- 5. In the **VDNs:** field, enter the name or number of the VDN for which the exceptions configuration is to be created.
- 6. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, CMS will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 7. When all necessary time limits and thresholds have been entered, select **Actions** > **Add** from the menu bar.

Supervisor saves the data for this VDN exception configuration and the status bar displays a **Successful** message.

Modifying VDN exceptions

This section provides the procedure for modifying an existing exception configuration for a VDN.

Steps

To modify VDN exceptions:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD:** field, select the ACD that contains the VDN and its exception configuration.
- 3. In the **Operations:** list, highlight **VDN Exceptions**.
- 4. Select OK.

Supervisor displays the VDN Exception Administration window.

- 5. In the **VDNs:** field, enter the name or number of the VDN for which exception configuration is to be modified.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the exception configuration data for the specified VDN and displays it in the appropriate fields. If exception configuration data cannot be found for this VDN, the status bar displays **0 matches found**.

To have all VDNs returned in this step, leave the **VDNs:** field blank before performing the **Find one** action. *Supervisor* will return all VDNs for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the VDNs.

- 7. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, CMS will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If CMS should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.

8. When all necessary time limits and thresholds have been entered, select **Actions** > **Modify** from the menu bar.

Supervisor updates the exception configuration data for this VDN and the status bar displays a **Successful** message.

Deleting VDN exceptions

This section provides the procedure for deleting existing VDN exception configurations.

Steps

To delete a VDN exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the ACD: field, select the ACD that contains the VDN and its exception configuration.
- 3. In the **Operations:** list, highlight **VDN Exceptions**.
- 4. Select OK.

Supervisor displays the VDN Exception Administration window.

- 5. In the **VDNs:** field, enter the name or number of the VDN for which the exception configuration is to be deleted.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the exception configuration for the specified VDN and the data displays in the appropriate fields. If exception configuration data cannot be found, the status bar displays **0 matches found**.

To have all VDNs returned through this step, leave the **VDNs:** field blank. *Supervisor* displays the total number of matches in the status bar. The VDNs can then be navigated by using the **Next** and **Previous** actions.

7. From the menu bar, select **Actions > Delete**.

Supervisor deletes the exception configuration for this VDN from the *CMS* database and displays a **Successful** message in the status bar.

VDN exception definitions

The following table provides the definitions for the different VDN exceptions:

In this field	Enter this value	
Time in Vector	The maximum acceptable time in seconds that a call should spend in vector processing. This exception can only be triggered once per interval.	
Time at agent (minimum)	The minimum acceptable time in seconds that a call to this VDN is connected to an agent. This exception can only be triggered once per interval.	
Time at agent (maximum)	The maximum acceptable time in seconds that a call to this VDN is connected to an agent. This exception can only be triggered once per interval.	
Number of calls abandoned while in vector	The maximum acceptable number of calls to this VDN that are abandoned before being answered during an interval. This exception can only be triggered once per interval.	
Number of calls forced busy	The maximum acceptable number of calls to this VDN that receive a busy signal from the switch during an interval. This exception can only be triggered once per interval.	
Number of calls disconnected	The maximum acceptable number of calls that are disconnected during vector processing during an interval. Disconnects can be caused by the disconnect vector command, by the vector disconnect timer, or because a call reached the end of vector processing without being queued. Calls that are disconnected after receiving a busy signal from the busy command are not included. This exception can only be triggered once per interval.	
Number of calls in an ACD split/skill queue	The maximum acceptable number of call to this VDN that are in a split/skill queue.	
Number of calls that flowed into VDN	The maximum number of calls during an interval that enter this VDN by a route-to or adjunct routing link vector step, or a transfer from a local extension. This exception can only be triggered once per interval.	
Number of calls that flowed out of VDN	The maximum acceptable number of calls that are routed from this VDN during an interval to another VDN or external destination. This exception can only be triggered once per interval.	
Number of calls that interflowed out of VDN	The maximum acceptable number of calls that are routed from this VDN to an external destination during an interval. This exception can only be triggered once per interval.	

In this field	Enter this value
Number of calls handled by backup split or skill	The maximum acceptable number of calls to this VDN that are connected to a backup split/skill during an interval. A check backup split, check backup skill, messaging split, or messaging skill vector command causes a call to be handled by a backup split/ skill. This exception cannot trigger more than once per interval.
Number of unsuccessful look ahead interflow attempts	The maximum acceptable number of calls to this VDN that fail to interflow to another Communication Manager system during an interval. The route-to vector command causes a call to interflow. This exception can only be triggered once per interval.
Number of unsuccessful adjunct routing attempts	The maximum acceptable number of failures of a call to this VDN to connect to an adjunct host computer during an interval. The failure of an adjunct route link vector command causes an unsuccessful adjunct routing attempt. The failure can occur because the connection to the adjunct is out of service or busy, or because the adjunct software rejects control. This exception can only be triggered once per interval.
Rolling Average Speed of Answer	The acceptable amount of time, in seconds, that is calculated for the rolling average speed of answer for a VDN. This exception can only be triggered once per interval.

Vector exceptions

When vector exceptions are configured and activated, *CMS* monitors for these exceptions when a call enters the vector and continues monitoring until the call connects to an agent, is abandoned, or is routed to another destination.

Vector exceptions can assist in the identification of problems in the following areas:

- The amount of time that a call waits in a vector
- The number of calls that are abandoned, disconnected, or forced busy while in the vector
- Numerous unsuccessful routing attempts

This section contains the following topics:

- Before you begin on page 222
- <u>Permissions</u> on page 222
- Adding vector exceptions on page 222

- Modifying vector exceptions on page 223
- Deleting vector exceptions on page 224
- <u>Vector exception definitions</u> on page 226

Before you begin

The following items should be read and understood before working with vector exceptions:

- Calls may generate some exceptions for a vector, even after the vector has given routing control to the adjunct by an adjunct routing vector command.
- Some exception types require that an appropriate step exists in the vector. For example, to get exceptions on unsuccessful Look Ahead Interflow attempts, the vector must have at least one route to step which routes calls to a remote Communication Manager system.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view vector exceptions, the user ID used to log in to this *Supervisor* session requires *read* permission for the Exceptions subsystem and all affected vectors as well as the *exceptions* permission for the affected vectors.
- To add, delete, or change vector exceptions, the user ID used to log in to this *Supervisor* session requires *write* permission for the Exceptions subsystem and all affected vectors as well as the *exceptions* permission for the affected vectors.

Adding vector exceptions

This section provides the procedure for adding an exceptions configuration for a vector.

Steps

To add a vector exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD**: field, select the ACD that contains the vector that will receive the new exceptions configuration.
- 3. In the **Operations:** list, highlight **Vector Exceptions**.

4. Select **OK**.

Supervisor displays the Vector Exception Administration window.

- 5. In the **Vectors:** field, enter the name or number of the vector for which an exceptions configuration is to be created.
- 6. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, *CMS* will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- 7. When all necessary time limits and thresholds have been entered, select **Actions** > **Add** from the menu bar.

Supervisor saves the data for this vector exception configuration and the displays a **Successful** message in the status bar.

Modifying vector exceptions

This section provides the procedure for modifying an existing exception configuration for a vector.

Steps

To modify vector exceptions:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. In the **ACD:** field, select the ACD that contains the vector and its exception configuration.
- 3. In the **Operations:** list, highlight **Vector Exceptions**.
- 4. Select OK.

Supervisor displays the Vector Exception Administration window.

- 5. In the **Vectors:** field, enter the name or number of the vector for which the exception configuration is to be modified.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the agent exception configuration for the specified split/skill and displays the data in the appropriate fields. If the exception configuration data cannot be found, the status bar displays **0 matches found**.

To have all vectors returned when performing this step, leave the **Vectors:** field blank before performing the **Find one** action. *Supervisor* will return all vectors for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the vectors.

- 7. For each **Exception Type** that should be monitored, the following fields must be configured:
 - Active Place a check mark in this check box to enable the exception allowing it to run and adhere to the parameters given in the other fields. Leaving this check box blank will disable the exception and *CMS* will not attempt to track the activity for this exception.
 - **Time Limit** Set the time limit in seconds (0-28800) for exception types that use a time limit. This value is used as the minimum or maximum amount of time for an activity. If this limit is surpassed, *CMS* will count this activity and compare it against the **Threshold** field. This field is requires an entry and cannot be left blank.
 - **Threshold** Enter the number of acceptable occurrences of this activity (0-999). Any occurrences beyond this number will generate an exception. If *CMS* should create an exception on the very first instance, enter 0 in this field. This field requires an entry and cannot be left blank.
- When all necessary time limits and thresholds have been entered, select Actions > Modify from the menu bar.

Supervisor updates the exception configuration data for this vector and the status bar displays a **Successful** message.

Deleting vector exceptions

This section provides the procedure for deleting existing vector exception configurations.

Steps

To delete a vector exception configuration:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

2. In the **ACD:** field, select the ACD that contains the vector and its exception configuration.

- 3. In the **Operations:** list, highlight **Vector Exceptions**.
- 4. Select OK.

Supervisor displays the Vector Exception Administration window.

- 5. In the **Vectors:** field, enter the name or number of the vector for which the exception configuration is to be deleted.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor locates the agent exception configuration for the specified split/skill and displays the data in the appropriate fields. If the exception configuration data cannot be found, the status bar displays **0 matches found**.

To have all vectors returned in this step, leave the **Vectors:** field blank before performing the **Find one** action. *Supervisor* will return all vectors for which you have the *read* permission. You can then use the **Next** and **Previous** menu actions to cycle through the vectors.

7. From the menu bar, select **Actions > Delete**.

Supervisor deletes the exception configuration for this vector from the *CMS* database and displays a **Successful** message in the status bar.

Vector exception definitions

The following table provides the definitions for the different vector exceptions:

In this field	Enter this value	
Time in vector (max)	The maximum acceptable time in seconds that a call is in vector processing. This exception cannot trigger more than once per interval.	
Number of calls abandoned while in vector	The maximum acceptable number of calls that are abandoned during vector processing in an interval. This exception cannot trigger more than once within an interval.	
Number of calls forced busy	The maximum acceptable number of calls that encountered a forced busy step in a vector during an interval. This exception cannot trigger more than once per interval.	
Number of calls disconnected	The maximum acceptable number of calls that are disconnected during vector processing during an interval. Disconnects can be caused by the disconnect vector command, by the vector disconnect timer, or because a call reached the end of vector processing without being queued. This exception cannot be triggered more than once per interval.	
Number of calls in an ACD split or skill queue	The maximum acceptable number of calls to this vector that are in a split/skill queue.	
Number of unsuccessful look ahead interflow attempts	The maximum acceptable number of calls to this vector that fail to interflow to another Communication Manager system during an interval. The route-to vector command causes a call to interflow. This exception cannot trigger more than once per interval.	
Number of unsuccessful adjunct routing attempts	The maximum acceptable number of failures for a call in this vector to connect to an adjunct host computer during an interval. The failure of an adjunct route link vector command causes an unsuccessful adjunct routing attempt. This exception cannot trigger more than one exception per interval.	

Supervisor sends the malicious call trace report to the specified output method.

Real-time exceptions log

The real-time exception log lists the last ten exceptions in chronological order, with the oldest exception listed first. The log displays all types of exceptions for which the user has the *exception* permission, such as agent, split/skill, trunk group, VDN, and vector.

This section contains the following topics:

- Before you begin on page 227
- Running the real-time exceptions log on page 228

Before you begin

The following items should be read and understood before working with the real-time exceptions log:

- When the log is first opened, the most recent exception is on the last line in the window. As long as the window remains open, the log automatically scrolls to display each new exception record. If the scroll bar is used to view the older records at the top of the log, automatic scrolling for new exceptions stops until the user scrolls back to the bottom of the log.
- Each exception record in the log supplies the following information:
 - The date and time that the exception occurred
 - The name of the ACD for which the exception occurred
 - The ACD element, such as a specific agent, split/skill, or VDN that was involved in the exception.

If names for these elements were assigned in the Dictionary, these will display instead. If the names are longer than the space that is allowed in the exception record, the names will be truncated.

 The information about an activity that fell outside of the exception conditions that you set.

Therefore, for a peg count exception, the exception record shows the occurrence threshold that you set, even though the number of occurrences may be substantially greater. For a timed exception, the exception record shows the time limit that you set, not the actual duration of an occurrence.

The real-time exception log can hold a maximum of 100 records. If a new exception
occurs when the log is full, the oldest exception is deleted so that the new exception
can be recorded.

Running the real-time exceptions log

This section provides the procedure for running the real-time exceptions log.

Steps

To run the real-time exceptions log:

- From the Controller window, select Commands > Exceptions.
 Supervisor displays the Exceptions window.
- 2. In the **ACD:** field, select the ACD for which exceptions will be shown.
- 3. In the **Operations:** list, highlight **Real-time Exception Log**.
- 4. Select OK.

Supervisor displays the Real-Time Exception Log window.

Exception reports

You can generate reports on any ACD activities, and when you set parameters through options on the **Exceptions Commands** menu.

This section includes the following topics:

- <u>Agent exceptions by location report</u> on page 228
- Split/skill exceptions report on page 233
- Trunk group exceptions report on page 235
- VDN exceptions report on page 236
- <u>Vector exceptions report</u> on page 238
- Data collection exceptions report on page 230
- Malicious call trace report on page 231

Agent exceptions by location report

Use the agent exceptions by location report to view exceptions that have occurred for the selected agents. For each agent exception, the report shows the time, agent, and type of exception.

Before you begin

To be able to view data for an agent exception report, the following events must have occurred:

- One or more agent exceptions must have been activated.
- The exceptions must have occurred at some point. Otherwise, the report is blank.
- Active exceptions must be specified in the input window so that they are included in the report.

Steps

To run the agent exceptions report:

- From the Controller window, select Commands > Exceptions.
 Supervisor displays the Exceptions window.
- 2. Select the **Reports** tab.
- 3. In the **ACD:** field, select the ACD that contains the agents on which to run the report.
- 4. In the **Reports:** list, highlight **Agent Exceptions by Location**.
- 5. Select OK.

Supervisor displays the Agent Exceptions window.

- 6. In the **Date:** field, specify the date for the report in one of the following date formats:
 - Enter the date in MM/DD/YY format, for example, 10/06/01.
 - Enter the relative date, for example, 0 for today, -1 for yesterday, or -7 for one week ago.
 - Enter a relative date range, for example, -9-0 causes the report to display data for the past ten days including today.
 - Select a date from the drop-down list.
 - Select a date by using the Browse button.

This is a required field.

- 7. In the **Split/Skill:** field, enter the name or number of the split/skill to display in the report. This is a required field.
- 8. In the **Agents:** field, specify the name or number of the agents to display in the report.

This is a required field.

This field accepts the specification of multiple agents. Multiple values must be separated by a semicolon (;).

- 9. In the Order by: field, select one of the following sorting options:
 - Agent The report results are sorted by agent name or number.
 - **Time** The report results are sorted by the time that the exceptions occurred.

10. In the **Exceptions:** field, select one or more exceptions to include in the report.

Select only those exceptions that are or have been activated during the date specified. If you select exceptions that have not been active during the date specified, the report does not display any data in the report.

- 11. In the **Destination** group, select the output option of the report:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** Sends the report to the printer that is specified in the associated field. To change the specified printer, select the **Select printer** button located on the right side of this group.
- 12. Select OK.

Supervisor runs the report and sends it to the specified destination.

Data collection exceptions report

Use the data collection exceptions report to view any event that affects the storage of contact center data. This includes the following:

- Starting or stopping data collection
- Resetting the clock
- A session (link) is down

This section contains the following topics:

- Before you begin on page 230
- Running a data collection exceptions report on page 230

Before you begin

The following items should be read and understood before working with the data collections exceptions report:

- Exceptions must have occurred for the exception type that you want the report to cover. Otherwise, the report is blank.
- User IDs must have the *exception* permission for the ACD in order to be notified of a *link-down* exception.

Running a data collection exceptions report

This section provides the procedure for running the data collection exceptions report so that any event that affects the storage of data can be viewed.

Steps

To run the data collection exceptions report:

- From the Controller window, select Commands > Exceptions.
 Supervisor displays the Exceptions window.
- 2. Select the **Reports** tab.
- 3. In the **Reports:** list, highlight **Data Collection Exceptions**.
- 4. Select **OK**.

Supervisor displays the Data Collection Exceptions window.

- In the ACDs: field, select one or more ACDs for which you want to run the report.
 This field accepts multiple values. Multiple ACDs must be separated by a semicolon (;).
- 6. In the **Dates:** field, enter the date the report will cover by using one of the following methods:
 - Enter MM/DD/YY format; for example, 10/06/01.
 - Enter the related day; for example, 0 for today, -1 for yesterday, or -7 for one week ago.
 - Enter a relative range; for example, -9-0 causes the report to display data for the past ten days including today.
 - Select the date from the drop-down list box.
 - Select a date or date range by using the Browse button.

This field can accept multiple date values, but the dates must be separated by a semicolon (;). This field is required.

- 7. In **Destination** group, select one of the following output options:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 8. Select OK.

Supervisor sends the data collection exceptions report to the specified output method.

Malicious call trace report

The Malicious Call Trace feature provides a way for a terminal user to notify a predefined set of users that he or she may be party to a malicious call, such as bomb threats, hackers, and so forth.

The following actions occur when the Malicious Call Trace feature is activated:

- The inbound phone line is prevented from "hanging up".
- Management is immediately alerted.
- The call is recorded (with an additional Communication Manager feature).
- All data regarding the call is stored.

The malicious call trace report is used to view detailed information on the occurrences of these calls. The report shows the date and time when each call occurred, the agent who received the call, and the involved split or skill. If the automatic number identification / station number identification (ANI/SID) network feature has been purchased and implemented, the report also shows where the call originated. This report is only available with *Supervisor*.

Before you begin

The following items should be read and understood before working with the malicious call trace report:

• To view the malicious call trace report, the user ID used to log in to this *Supervisor* session requires the *exception* permission for the split/skill that received the malicious call.

Running a malicious call trace report

This section provides the procedure for running a malicious call trace report.

Steps

To run a malicious call trace report:

- From the Controller window, select Commands > Exceptions.
 Supervisor displays the Exceptions window.
- 2. Select the **Reports** tab.
- 3. In the **ACD**: field, select the ACD for which the report will gather data.
- 4. In the **Reports:** list, highlight **Malicious Call Trace by Location**.
- 5. Select OK.

Supervisor displays the Malicious Call Trace window.

- 6. In the **Dates:** field, enter the date the report will cover by using one of the following methods:
 - Enter MM/DD/YY format; for example, 10/06/01.
 - Enter the related day; for example, 0 for today, -1 for yesterday, or -7 for one week ago.

- Enter a relative range; for example, -9-0 causes the report to display data for the past ten days including today.
- Select the date from the drop-down list box.
- Select a date or date range by using the Browse button.

This field can accept multiple date values, but the dates must be separated by a semicolon (;). This field is required.

- 7. In **Destination** group, select one of the following output options:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 8. Select OK.

Split/skill exceptions report

The split/skill exceptions report is used to view exceptions that have occurred for the selected splits/skills. For each split/skill exception, the report shows the time and type of exception.

Before you begin

To be able to view data for a split/skill exception report, the following events must have occurred:

- One or more split/skill exceptions must have been activated.
- The exceptions must have occurred at some point. Otherwise, the report is blank.
- Active exceptions must be specified in the input window so that they are included in the report.
- The user ID used to run the report must have the *read* permission for the Exceptions subsystem and the affected splits/skills as well as the *exceptions* permission for all affected splits/skills.

Steps

To run the split/skill exceptions report:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. Select the **Reports** tab.
- 3. In the **ACD**: field, select the ACD that contains the split/skill on which to run the report.
- 4. In the Reports: list, highlight Split/Skill Exceptions.

5. Select OK.

Supervisor displays the Split/Skill Exceptions window.

- 6. In the **Date:** field, specify the date for which you want to view the report. Entry of the date can be done through the following methods:
 - Enter MM/DD/YY format; for example, 10/06/01.
 - Enter the relative day; for example, 0 for today, -1 for yesterday, or -7 for one week ago.
 - Enter a relative range; for example, -9-0 causes the report to display data for the past ten days including today.
 - Select a date from the drop-down list.
 - Select a date by using the Browse button.

This is a required field.

- 7. In the **Splits/Skills:** field, specify the name or number of one or more splits/skills to run the report against. Entry of the split/skill can be done through the following methods:
 - Enter the name or number of the split/skill.
 - Select the split/skill from the drop-down list.
 - Select the split/skill by using the Browse button.

Multiple splits/skills can be entered in this field, but must be separated by a semicolon (;). This is a required field.

- 8. In the **Order by:** field, select one of the following sorting options:
 - Split/Skill The report results are sorted by split/skill name or number.
 - Time The report results are sorted by the time the exceptions occurred.
- 9. In the **Exceptions:** field, select one or more exceptions to include in the report.

Only those exceptions that have been activated in the past should be selected. Selecting exceptions that have not been activated will not return any data in the report.

- 10. In **Destination** group, select one of the following output options:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 11. Select OK.

Supervisor sends the report to the specified output option.

Trunk group exceptions report

Use the trunk group exceptions report to view exceptions that have occurred for the selected trunk groups. For each trunk group exception, the report shows the time and type of exception.

Before you begin

To be able to view data for a trunk group exception report, the following events must have occurred:

- One or more trunk group exceptions must have been activated.
- The exceptions must have occurred at some point. Otherwise, the report is blank.
- Active exceptions must be specified in the input window so that they are included in the report.

Steps

To run the trunk group exceptions report:

- From the Controller window, select Commands > Exceptions.
 Supervisor displays the Exceptions window.
- 2. Select the **Reports** tab.
- 3. In the **ACD:** field, select the ACD that contains the trunk group on which to run the report.
- 4. In the **Reports:** list, highlight **Trunk Group Exceptions by Location**.
- 5. Select **OK**.

Supervisor displays the Trunk Group Exceptions window.

- 6. In the **Date:** field, specify the date to view for the report. Entry of the date can be done through the following methods:
 - Enter MM/DD/YY format; for example, 10/06/01.
 - Enter the relative day; for example, 0 for today, -1 for yesterday, or -7 for one week ago.
 - Enter a relative range; for example, -9-0 causes the report to display data for the past ten days including today.
 - Select a date from the drop-down list.
 - Select a date by using the Browse button.

This is a required field.

- 7. In the **Trunk Groups:** field, specify the name or number of one or more trunk groups to run the report against. Entry of the trunk group can be done through the following methods:
 - Enter the name or number of the trunk group.

- Select the trunk group from the drop-down list.
- Select the trunk group by using the Browse button.

Multiple trunk groups can be entered in this field, but must be separated by a semicolon (;).

This is a required field.

- 8. In the **Order by:** field, select one of the following sorting options:
 - **Trunk Group** The report results are sorted by trunk group number.
 - Trunk Location The report results are sorted by individual trunks.
 - **Time** The report results are sorted by the time the exceptions occurred.
- 9. In the Exceptions: field, select one or more exceptions to include in the report.

Select only those exceptions that are or have been activated during the date specified. If you select exceptions that have not been active during the date specified, the report does not display any data in the report.

Audio difficulty is a trunk group exception that can be requested on a report even though it cannot be administered in trunk group exception operations.

- 10. In **Destination** group, select one of the following output options:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 11. Select OK.

Supervisor sends the report to the specified output option.

VDN exceptions report

Use the VDN exceptions report to view exceptions that have occurred for the selected VDN. For each VDN exception, the report shows the time and type of exception.

Before you begin

To be able to view data for a VDN exception report, the following events must have occurred:

- One or more VDN exceptions must have been activated.
- The exceptions must have occurred at some point. Otherwise, the report is blank.
- Active exceptions must be specified in the input window so that they are included in the report.

Steps

To run the VDN exceptions report:

- From the Controller window, select Commands > Exceptions.
 Supervisor displays the Exceptions window.
- 2. Select the **Reports** tab.
- 3. In the **ACD:** field, select the ACD that contains the VDN on which to run the report.
- 4. In the **Reports:** list, highlight **VDN Exceptions by Location**.
- 5. Select **OK**.

Supervisor displays the VDN Exceptions window.

- 6. In the **Date:** field, specify the date to view for the report. Entry of the date can be done through the following methods:
 - Enter MM/DD/YY format; for example, 10/06/01.
 - Enter the relative day; for example, 0 for today, -1 for yesterday, or -7 for one week ago.
 - Enter a relative range; for example, -9-0 causes the report to display data for the past ten days including today.
 - Select a date from the drop-down list.
 - Select a date by using the Browse button.

This is a required field.

- 7. In the **VDNs:** field, specify the name or number of one or more VDNs to run the report against. Entry of the VDN can be done through the following methods:
 - Enter the name or number of the VDN.
 - Select the VDN from the drop-down list.
 - Select the VDN by using the Browse button.

Multiple VDNs can be entered in this field, but must be separated by a semicolon (;). This is a required field.

- 8. In the **Order by:** field, select one of the following sorting options:
 - **Time** The report results are sorted by the time the exceptions occurred.
 - VDN The report results are sorted by VDN name or number.
 - Vector The report results are sorted by vector.
- 9. In the **Exceptions:** field, select one or more exceptions to include in the report.

Select only those exceptions that have been activated at some point in the past. Selecting exceptions that have not been activated will not return any data in the report.

10. In **Destination** group, select one of the following output options:

- View Report on Screen The report is displayed on the screen.
- **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 11. Select OK.

Supervisor sends the report to the specified output option.

Vector exceptions report

Use the vector exceptions report to view exceptions that have occurred for the selected vectors. For each vector exception, the report shows the time and type of exception.

Before you begin

To be able to view data for a vector exception report, the following events must have occurred:

- One or more vector exceptions must have been activated at some time in the past.
- The exceptions must have occurred at some point. Otherwise, the report is blank.
- Active exceptions must be specified in the input window so that they are included in the report.

Steps

To run an vector exceptions report:

1. From the Controller window, select **Commands** > **Exceptions**.

Supervisor displays the Exceptions window.

- 2. Select the **Reports** tab.
- 3. In the **ACD**: field, select the ACD that contains the vector on which to run the report.
- 4. In the **Reports:** list, highlight **Vector Exceptions**.
- 5. Select OK.

Supervisor displays the Vector Exceptions window.

- 6. In the **Date:** field, specify the date to view for the report. Entry of the date can be done through the following methods:
 - Enter MM/DD/YY format; for example, 10/06/01.
 - Enter the relative day; for example, 0 for today, -1 for yesterday, or -7 for one week ago.
 - Enter a relative range; for example, -9-0 causes the report to display data for the past ten days including today.
 - Select a date from the drop-down list.

• Select a date by using the Browse button.

This is a required field.

- 7. In the **Vectors:** field, specify the name or number of one or more vectors to run the report against. Entry of the vector can be done through the following methods:
 - Enter the name or number of the vector.
 - Select the vector from the drop-down list.
 - Select the vector by using the Browse button.

Multiple vectors can be entered in this field, but must be separated by a semicolon (;). This is a required field.

- 8. In the **Order by:** field, select one of the following sorting options:
 - **Time** The report results are sorted by the time the exceptions occurred.
 - Vector The report results are sorted by vector name or number.
- 9. In the **Exceptions:** field, select one or more exceptions to include in the report.

The exceptions selected in this field should be those that have been activated at some point in the past. Selecting exceptions that have not been activated will not return any data in the report.

- 10. In **Destination** group, select one of the following output options:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 11. Select OK.

Supervisor sends the report to the specified output option.

Chapter 8: Administering exceptions

Chapter 9: Administering user permissions

The *User Permissions* subsystem is used to create *CMS* user IDs as well as assigning and administering user permissions such as *read*, *write*, and *exception* permissions for ACDs, splits/ skills, trunk groups, VDNs, and vectors.

The default *CMS* administrator user ID, cms, provides access to the entire system. Using the cms ID, user IDs can be created for each person requiring access to the *CMS* system and set with the permissions necessary to perform job duties. Users should not share an ID since logging in with the same ID at multiple terminals uses more system resources than if each user had different IDs.

This section contains the following topics:

- Before you begin on page 241
- Example of user permissions on page 242
- User data on page 242
- ACD access on page 249
- Feature access on page 255
- <u>Main Menu Addition Access</u> on page 258
- Split/Skill access on page 262
- Trunk group access on page 268
- <u>Vector access</u> on page 275
- VDN access on page 281

Before you begin

If an ACD Group is selected as the current ACD in the **User Permissions** window, only those operations that are valid for the ACD Group will appear in the **Operations:** list.

Example of user permissions

A Important:

Any user ID (normal or administrator) given *write* access to the *User Permission* feature will be able to alter their own permissions for all *CMS* subsystems.

The following table displays an example of permissions that would be necessary for a split supervisor:

If the contact center has one split called	And assigned to it are	The split 1 supervisor requires read/ write permissions for
Split 1	Trunk groups 22 and 23	Split 1 Trunk groups 22 and 23 Dictionary Exceptions

User data

In order for users to use *Supervisor*, they must first be created through the *User Data* feature. Afterwards, users can use their assigned ID to log in through *Supervisor* and *CMS*. User IDs should only be created for those persons who will be using *Supervisor* as a part of their job duties in administering the contact center.

The **User Data** window is used for the following actions:

- Assign a CMS user ID.
- Specify a default CMS printer for a user ID.
- Specify a user ID as Normal or Administrator.
- Administer the maximum number of open simultaneous windows allowed for a user ID.
- Set the minimum refresh rate for real-time reports for a user ID.
- Set the default logon ACD for a user ID.

This section contains the following topics:

- Adding a CMS user on page 243
- Viewing CMS users on page 245
- Modifying CMS users on page 247

• Deleting CMS users on page 248

Adding a CMS user

This section provides the procedure for adding a user through *Supervisor*.

Before you begin

The following items should be read and understood before adding a user:

- A user ID must be created before any permissions can be assigned to it.
- Users added through the Sun Microsystems, Inc. Solaris system instead of the User Data window will not be able to run CMS without assuming the role of a valid user by using the su command. Solaris users will have a shell of /usr/bin/sh. The User Data window will not display users that were created through Solaris.
- Users added through the **User Data** window will automatically have *CMS* launch when they log in. The shell for these users will be /usr/bin/cms.
- The **User Data** window can be run through scripts and timetables.

Permissions

Depending on the procedure to be performed, the following permissions must be observed:

- To display the **User Data** window and view user information, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify users through the User Data window, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** sub system.

Steps

To add a *CMS* user ID:

1. From the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

The **Vector Access** and **VDN Access** menu items are listed if the Call Vectoring feature has been purchased.

2. In the **ACD**: field, select the ACD or ACD Group on which the user will be created.

The same user ID does not need to be created on each ACD. A user created on one ACD can be given permissions to the other ACDs.

- 3. In the **Operations:** list, highlight **User Data**.
- 4. Select OK.

Supervisor displays the User Permissions User Data window.

- 5. In the **User ID:** field, enter the new user ID to be created. The user ID must adhere to the following rules:
 - The user ID can be three to eight characters.
 - User IDs cannot contain certain diacritical, accented, special characters, or blanks (for example, á, ñ, ç, |, [©]). If a user ID is entered with an invalid character, *Supervisor* displays an error message.

This is a required field.

6. In the **User name:**, **Room number:**, and **Telephone number:** fields, enter the appropriate information for this user.

These fields are optional and may be left blank.

7. In the **Default printer name:** field, select a default *CMS* printer from the drop-down list box for this user ID.

This field is optional and my be left as (none).

- 8. For Login type:, select the role of this user ID:
 - **Normal user** Select this type to designate those users whose job responsibilities *do not* include maintenance, configuration, and updating of *CMS*.

This role of user has only the *read* permission for the following features:

- Agent Administration
- Custom Reports/Report Designer
- Dictionary
- Exceptions
- Forecast
- Maintenance
- Reports
- Timetable
- Administrator Select this type to designate those users who job responsibilities include maintenance, configuration, or updating of *CMS*. This user role is assigned *read* and *write* permissions for all features.

A Important:

Changing the role of the user after creation will not change any permissions assigned to the user. All permission changes need to be done manually.

9. In the **Maximum user window count (1-12):** field, enter the number of windows that the user may have open simultaneously. The default for this field is **4**.

A Important:

Allowing many users to have multiple windows open will consume more CMS processor resources.

10. In the **Minimum refresh rate (seconds):** field, enter the number of seconds (3-600) in which data for real-time reports is retrieved again from the database and displayed for this user ID.

Faster refresh rates consume more CMS processor resources.

11. In the Login ACD: field, select the ACD which will be used to login this user ID. The user can change the current ACD after logging in, but each time the user logs in, the current ACD defaults to the value entered in this field.

If an ACD is selected in this field for log in and the user does not have any permissions for it, Supervisor displays an error message.

This is a required field and cannot be left with the default value of (none).

12. Select Actions > Add from the menu bar.

The user ID is created on the ACD specified earlier in the User Permissions dialog box. If the user ID already exists, Supervisor displays an Already exists message in the status bar.

The password of the new user is blank at this time. SSH connections to the CMS server require that the password of the user is set. Refer to Changing a user's password on page 404 if the users are going to connect to the CMS server using SSH.

Viewing CMS users

This section provides the procedure for viewing one or more existing CMS users through the User Data window.

Before you begin

The following items should be read and understood before attempting to view users through the User Data window:

The default values in the User Data window should be cleared before attempting to • perform a **Find one** or **List all** action unless these values should be included in the search.

Permissions

Depending on the procedure to be performed, the following permissions must be observed:

- To display the **User Data** window and view user information, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify users through the **User Data** window, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** sub system.

Steps

1. From the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

The **Vector Access** and **VDN Access** menu items are listed if the Call Vectoring feature has been purchased.

- 2. In the **Operations:** list, highlight **User Data**.
- 3. Select OK.

Supervisor displays the User Permissions User Data window.

4. Using the menu bar, select **Edit** > **Clear all**.

The information in all fields is removed. This includes the default information that appears when this window is first displayed.

- 5. There are two possible methods in searching for and displaying *CMS* user information:
 - List all Selecting this item from the Action menu will display a secondary window displaying all users whose settings match those in the fields of this window. If no information is present in the fields, all users are displayed. This method is convenient when the need arises to look for one or more user IDs.
 - Find one Selecting this item from the Action menu will take the information currently in all the fields of this dialog and query the database for users with matching settings. For example, having a 6 in the Maximum user window count (1-12): field with all other fields blank and selecting Find one will result in a search for all CMS users having a 6 for their Maximum user window count. If multiple users are found, each can be viewed by selecting the Next and Previous items under the Actions menu.

When using the **Find one** command, partial text strings are not supported in the search. Therefore, to view the settings for a user ID, the complete name must be entered in the **User ID:** field.

If multiple users are found using the **Find one** action, the **Next** action will not become disabled at the last user, but instead cause the first user found to be displayed again.

Modifying CMS users

This section provides the procedure for modifying the settings for an existing CMS user.

Before you begin

The following items should be read and understood before modifying users through the **User Data** window:

- If a user's login ACD is removed and the user tries to log into *CMS*, an acknowledgment tells the user either to contact the *CMS* administrator or to change the login ACD.
- Changing the login type for a user from **Administration** to **Normal** or vice versa does not change the permissions for that user ID. Permissions must be changed manually.
- Changes to maximum window count, minimum refresh rate, or default login ACD for a user do not take effect until the user logs out and back in again.

Permissions

Depending on the procedure to be performed, the following permissions must be observed:

- To display the **User Data** window and view user information, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify users through the **User Data** window, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** subsystem.

Steps

To modify the settings for an existing CMS user:

1. From the Controller window, select **Tools** > **User Permissions**.

Supervisor displays the User Permissions window.

The **Vector Access** and **VDN Access** menu items are listed if the Call Vectoring feature has been purchased.

- 2. In the **Operations:** list, highlight **User Data**.
- 3. Select OK.

Supervisor displays the User Permissions User Data window.

- 4. Clear all field default values by selecting **Edit** > **Clear All** from the menu bar.
- 5. In the **Login type (select only one):** field, select the login type for the user that will be modified.
- 6. Enter the name of the user to modify in the User ID: field.

7. Select Actions > Find one.

The settings for the specified user ID will populate their associated fields.

If the user ID was not found, try selecting the other login type in the **Login type (select only one):** field.

- 8. Modify the settings for this user as needed.
- 9. After all necessary modifications have been made, select Actions > Modify.

The settings for this user are updated and the status bar will display a **Successful** message.

Deleting CMS users

This section provides the procedure for deleting an existing CMS user.

Before you begin

The following items should be read and understood before deleting users through the **User Data** window:

- Deleting a user ID added through the **User Data** window of CMS will remove that ID and its associated permissions from *CMS* and the Solaris system.
- Deleting a user who had custom reports, designer reports, or timetables, will result in an acknowledgment window asking if those items should be moved to your user ID. If they are moved and there is a conflict between the assigned names, a prompt window will appear allowing the moved items to be renamed. If not moved, any custom reports, designer reports, and timetables will be deleted along with the user ID.

Permissions

Depending on the procedure to be performed, the following permissions must be observed:

- To display the **User Data** window and view user information, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify users through the **User Data** window, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** sub system.

Steps

To delete an existing CMS user:

1. From the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

The **Vector Access** and **VDN Access** menu items are listed if the Call Vectoring feature has been purchased.

- 2. In the **Operations:** list, highlight **User Data**.
- 3. Select OK.

Supervisor displays the User Permissions User Data window.

4. Using the menu bar, select **Edit > Clear all**.

The information in all fields is removed. This includes the default information that appears when this window is first displayed.

- 5. In the **Login type (select only one):** field, select the login type of the user that will be deleted.
- 6. Enter the name of the user in the **User ID:** field.

If the user ID is not known, the other fields of this dialog box can be used to enter information that can return all users having matching information. For example, the **User name:** and **Room number:** fields can have information entered in them.

7. After user-identifying data has been entered in the fields, select **Actions** > **Find one** from the menu bar.

The status bar will return the number of matches found. Select **Actions** > **Next** to navigate to the next user in the list, if necessary.

8. When the dialog box displays the correct user, select **Actions > Delete** from the menu bar.

The identified user is deleted from the system and the status bar displays a **Successful** message.

ACD access

The **ACD Access** window is used to view and modify the user permissions for a selected real or pseudo ACD. This window can also be used to turn exception notification on or off for a selected ACD.

This section contains the following topics:

- <u>Before you begin</u> on page 250
- <u>Permissions</u> on page 250
- Adding ACD access on page 251
- Viewing ACD access on page 251
- Listing all ACD access on page 252
- Modifying ACD access on page 253
- Deleting ACD access on page 254

Before you begin

The following items should be read and understood before working with ACD access permissions:

- By default, a newly-created user is granted *read*, *write*, and *exceptions* permissions for all real and pseudo ACDs.
- User permissions for ACD access are stored separately from the user ID created through the <u>Adding a CMS user</u> procedure. Because of this, user permissions for the ACD can be deleted and modified without affecting the state of the user ID.
- If the ACD permissions for a user are changed, the change does not take effect until the user logs out and logs back in again.
- If the *read* and *write* permissions are disabled for a user, then the user will not be able to access any splits/skills, trunk groups, vectors, or VDNs in that ACD. If *read* is enabled and *write* is disabled, the user will not be able to modify splits/skills, trunk groups, vectors, or VDNs in that ACD.
- If the permissions for the default login ACD of a user are removed, the user must have another login ACD assigned.
- A user must be created through the **User Data** window before any ACD permissions can be assigned.
- Users should only have the ACD permissions necessary to perform job duties. Assigning only those necessary user permissions will ensure the best system performance.
- In some instances, it may be necessary to restrict a user from viewing information on an ACD. To do so, either delete the permissions definition for the user or remove all permissions for the necessary ACDs. Deleting the ACD permissions definition for a user will save more disk space.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view user permission settings in the **ACD Access** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify user permission settings in the ACD Access window, the user ID used to log in to this *Supervisor* session requires *write* permission for the User Permissions subsystem.

Adding ACD access

This section provides the procedure for adding ACD access permissions for a *CMS* user. Since a user permission definition for ACD access is created by default when the user ID is created, this procedure is only necessary if that permission definition has been deleted.

Steps

To add a user permission definition for an ACD:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **ACD Access**.
- 3. Select OK.

Supervisor displays the User Permissions ACD Access window.

4. In the **User ID:** field, enter the ID of the user for whom to create an ACD permissions definition.

This field is required.

5. In the **ACD:** field, enter the names or numbers for one or more ACDs that this user will be able to access (real, pseudo, or group).

Multiple values in this field must be separated with a semicolon (;).

- 6. Place a check mark in the permissions that will be assigned to this user:
 - Read: User can view but not modify information for the specified ACDs.
 - Write: User can modify information on the specified ACDs. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified ACDs.
- 7. After assigning the necessary permissions, select **Actions > Add** from the menu bar.

The ACD permissions for this user are saved.

It is possible to add permission definitions for multiple users at one time. To do so, enter multiple *CMS* users in the **User ID**: field and separate them with semicolons (;). The ACDs specified in the **ACDs**: field and the selected permissions are then created for these user IDs when the **Add** action is performed.

Viewing ACD access

This section provides the procedure for viewing the ACD access permissions for a CMS user.

Steps

To view the ACD permission definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **ACD Access**.
- 3. Select OK.

Supervisor displays the User Permissions ACD Access window.

4. In the **User ID:** field, enter the ID of the *CMS* user for which the permissions for ACDs are to be viewed.

This field is required.

When searching for the user permissions definitions on specific ACDs, these ACDs can be entered in the **ACDs:** field. Multiple entries must be separated by a semicolon (;).

5. From the menu bar, select **Actions > Find one**.

The status bar displays how many matching permission definitions are available. The fields of this window display the user permissions definition for the first ACD.

If more than one ACD is returned, use the **Next** action to view the permission definitions for the other ACDs.

Listing all ACD access

This section provides the procedure for listing the ACD permission definitions for all CMS users.

Steps

To list all ACD permission definitions for all CMS users:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **ACD Access**.
- 3. Select OK.

Supervisor displays the User Permissions ACD Access window.

4. From the menu bar, select **Actions** > **List all**.

All user permission definitions are displayed with their corresponding ACDs. Only those ACDs for which you have *read* permission will be shown.

Modifying ACD access

This section provides the procedure for modifying the ACD permission definitions for a CMS user.

If all ACD permissions are to be denied for a user, deleting the permissions definition for the user will save more disk space and accomplish the same goal.

A Important:

If the read permissions is denied for the ACD that the user logs into, that user will no longer be able to log on. A new default login ACD must be set for the user.

Steps

To modify the ACD permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **ACD Access**.
- 3. Select OK.

Supervisor displays the User Permissions ACD Access window.

- 4. In the User ID: field, enter the ID of the
- 5. CMS user for which the permissions for ACDs are to be modified.

When searching for the user permissions definitions on specific ACDs, these ACDs can be entered in the **ACDs:** field. Multiple entries must be separated by a semicolon (;). These entries can include real ACDs, pseudo-ACDs, or ACD Groups.

6. From the menu bar, select Actions > Find one.

The status bar displays how many matching permission definitions are available. The fields of this window display the user permissions definition for the first ACD.

If more than one ACD is returned, use the Next action to view the permission definitions for the other ACDs.

- 7. Once the correct permission definition is displayed in the window, change the permissions by adding or removing check marks in the Read:, Write:, or Exceptions: check boxes.
- 8. Once the permissions have been changed to the necessary settings, select Actions > Modify from the menu bar.

The user permissions definition for this ACD is updated and the status bar displays a Successful message.

Deleting ACD access

This section provides the procedure for deleting the ACD permission definition for a CMS user.

A Important:

If the user permissions definition is deleted for the ACD that the user logs into, that user will no longer be able to log on. A new default login ACD must be set for the user. Deleting the permissions definition does not restrict the permissions for the user, but actually deletes the user from the specified ACD. This action does not affect the user ID created through the **User Data** feature.

Steps

To delete the ACD permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **ACD Access**.
- 3. Select OK.

Supervisor displays the User Permissions ACD Access window.

4. In the **User ID:** field, enter the ID of the *CMS* user for which the permissions for ACDs are to be modified.

When searching for the user permissions definitions on specific ACDs, these ACDs can be entered in the **ACDs:** field. Multiple entries must be separated by a semicolon (;). These entries can include real ACDs, pseudo-ACDs, or ACD Groups.

5. From the menu bar, select **Actions > Find one**.

The status bar displays how many matching permission definitions are available. The fields of this window display the user permissions definition for the first ACD.

If more than one ACD is returned, use the **Next** action to view the permission definitions for the other ACDs.

6. Once the correct permission definition is displayed in the window, select **Actions** > **Delete** from the menu bar.

The ACD permissions definition for this user is deleted and the status bar displays a **Successful** message.

 Once the permissions have been changed to the necessary settings, select Actions > Modify from the menu bar.

The user permissions definition for this ACD is updated and the status bar displays a **Successful** message.

Feature access

The **Feature Access** window is used to view and modify the permissions available to a *CMS* user ID for the following features:

- Agent Administration
- Call Center Administration
- Custom Reports
- Dictionary
- Exceptions
- Forecast
- Maintenance
- Reports
- CMS System Setup
- Timetable
- User Permissions
- UNIX® System

The permissions assigned to a user will affect the appearance of the *Supervisor* Controller window. For example, a user without permissions for the **Dictionary** feature will not have a corresponding toolbar button on the Controller window.

Contents

This section contains the following topics:

- Before you begin on page 256
- <u>Permissions</u> on page 256
- <u>Viewing Feature Access user permissions</u> on page 256
- Listing all Feature Access user permissions on page 257
- Modifying Feature Access user permissions on page 258

Before you begin

The following items should be read and understood before working with **Feature Access** permissions:

- Feature Access permissions cannot be modified for the cms and cmssvc user IDs. This prevents a user with access to the User Permissions feature from disabling access to all or part of *CMS* for the administrator or services personnel.
- If the **Feature Access** permissions for a user are modified, the changes do not take effect until the user logs off and back on again.
- A user ID must be created through the **User Data** feature before that user can have **Feature Access** permissions assigned.
- Default Feature Access permissions are assigned when a user ID is created. The Administrator type of user ID has permissions for all features. The Normal type of user ID is given *read* permissions for all features except User Permissions, System Setup, Call Center Administration, and Forecasting. User ID types are set through the User Data feature.
- Assigning a user the *write* permission for the **User Permissions** feature allows that user to change permissions for all users.
- A user ID cannot have *write* permissions without also having *read* permissions.
- If a user does not have *read* permission for a feature, that feature will not be displayed as a toolbar button or menu item in the *Supervisor* Controller window.
- Assigning only the necessary access permissions ensures the best system performance.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the **Feature Access** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify settings through the **Feature Access** window, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** subsystem.

Viewing Feature Access user permissions

This section provides the procedure for viewing **Feature Access** permissions for a CMS user.

Steps

To view the Feature Access permissions for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Feature Access**.
- 3. In the **ACD**: field, select the ACD or ACD Group on which you want to view user permissions for its feature set.
- 4. Select OK.

Supervisor displays the User Permissions Feature Access window.

5. In the User IDs: field, enter the ID of an existing CMS user.

This field can accept more than one user ID. Multiple IDs must be separated by a semicolon (;).

6. From the menu bar, select **Actions > Find one**.

Supervisor will display the permissions for the first user found. If multiple user IDs were entered, the status bar will display the number of matches found.

If multiple matches were found, use the **Actions** > **Next** command to navigate through the user IDs and their permissions.

Listing all Feature Access user permissions

This section provides the procedure for listing the **Feature Access** permissions for all *CMS* users on an ACD or ACD Group.

Steps

To list the Feature Access permissions for all CMS users:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the Operations: list, highlight Feature Access.
- In the ACD: field, select the ACD or ACD Group to view the user permissions for its feature set.
- 4. Select OK.

Supervisor displays the User Permissions Feature Access window.

5. From the menu bar, select **Actions > List all**.

Supervisor displays a secondary window listing all users and their associated feature permissions.

Modifying Feature Access user permissions

This section provides the procedure for modifying **Feature Access** permissions for a *CMS* user on an ACD or ACD Group.

Steps

To modify Feature Access permissions for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Feature Access**.
- 3. In the **ACD:** field, select the ACD or ACD Group on which the user permissions for its feature set will be modified.
- 4. Select OK.

Supervisor displays the User Permissions Feature Access window.

- 5. In the User IDs: field, enter the ID of an existing CMS user.
- 6. From the menu bar, select **Actions > Find one**.

Supervisor will display the permissions for the user.

A check mark in a check box signifies that the associated feature permission is enabled for the user.

- 7. Change the **Read** and **Write** permissions as necessary by placing or removing check marks in the check boxes for each feature.
- 8. When the necessary changes have been made to the user feature permissions, select **Actions** > **Modify** from the menu bar.

The feature access permissions for this user ID are updated and the status bar displays a **Successful** message.

Main Menu Addition Access

The **Main Menu Addition Access** feature is used to control which custom menu items appear on the *CMS* Main Menu for a user. Custom menu items are created through the **Main Menu Addition** feature which is located in the **System Setup** screen from the *CMS* ASCII interface.

These menu items cannot be created through Supervisor.

The custom menu items display on the *CMS* Main Menu which is seen through either *Terminal Emulator*, a telnet session to the *CMS* server, or the *CMS* console. The custom menu items do not display in the *Supervisor* Controller Window.

Contents

This section contains the following topics:

- <u>Before you begin</u> on page 259
- <u>Permissions</u> on page 259
- <u>Viewing Main Menu Addition Access</u> on page 260
- Listing all Main Menu Addition Access on page 260
- Assigning or modifying Main Menu Addition Access on page 261

Before you begin

The following items should be read and understood before working with **Main Menu Addition Access**:

- If the assigned **Main Menu Addition Access** permission for a user is disabled, the custom menu item will not be displayed on the *CMS* Main Menu for that user.
- If a the **Main Menu Addition Access** permission is changed for a user, those changes will not take effect until the user logs out and back in again.
- A user ID must be created through the **User Data** feature before assignments or changes can be made to that user ID through the **Main Menu Addition Access** feature.
- Main Menu additions must be created through **System Setup** before these custom menu items can be assigned to users.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view **Main Menu Addition Access** user configurations, the user ID used to log in to *CMS* requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify **Main Menu Addition Access** user configurations, the user ID used to log in to *CMS* requires *write* permission for the **User Permissions** subsystem.

Viewing Main Menu Addition Access

This section provides the procedure for viewing *CMS* user configurations for **Main Menu Addition Access**.

Steps

To view the Main Menu Addition Access configuration for a user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Main Menu Addition Access**.
- 3. Select OK.

Supervisor displays the User Permissions Main Menu Addition Access window.

4. In the **User IDs:** field, enter a *CMS* user ID that has been previously defined through the **User Data** feature.

This field can accept the entry of multiple users at one time. Multiple entries must be separated by a semicolon (;).

5. From the menu bar, select **Actions > Find one**.

Supervisor retrieves the **Main Menu Addition Access** information for the specified *CMS* user ID and displays this information in the remaining fields.

If multiple users were specified in the **User IDs:** field, the other users and their configurations can be seen by using **Actions** > **Next** from the menu bar.

Listing all Main Menu Addition Access

This section provides the procedure for listing all **Main Menu Addition Access** configurations that have been assigned to *CMS* users.

Steps

To list all Main Menu Addition Access configurations for CMS users:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Main Menu Addition Access**.
- 3. Select OK.

Supervisor displays the User Permissions Main Menu Addition Access window.

4. From the menu bar, select **Actions** > **List all**.

Supervisor displays a secondary window listing all *CMS* users that have custom menu items assigned and the permissions for those custom menu items.

Assigning or modifying Main Menu Addition Access

This section provides the procedure for assigning or modifying a custom Main Menu item for a *CMS* user.

Steps

To assign or modify a custom Main Menu item for a CMS users:

1. On the Controller window, select **Tools** > **User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Main Menu Addition Access**.
- 3. Select OK.

Supervisor displays the User Permissions Main Menu Addition Access window.

4. In the **User IDs:** field, enter a *CMS* user ID that has been previously defined through the **User Data** feature.

This field can accept the entry of multiple users at one time. Multiple entries must be separated by a semicolon (;).

5. From the menu bar, select **Actions > Find one**.

Supervisor retrieves the Main Menu Addition Access information for the specified *CMS* user ID and displays this information in the remaining fields.

If multiple users were specified in the **User IDs:** field, the other users and their configurations can be seen by using **Actions** > **Next** from the menu bar.

- 6. In the **Addition:** field, enter the custom menu item to be assigned or modified for the specified *CMS* user.
- 7. In the **Access:** check box, place a check mark to enable this custom menu item or remove the check mark to disable this menu item for the specified *CMS* user.
- 8. From the menu bar, select Actions > Modify.

The user configuration is updated and the status bar displays a **Successful** message.

Only the current *CMS* displayed in the **User IDs:** field is modified. If other user IDs are available through using the **Next** command, each one will require the **Modify** action for assignments to be applied.

Split/Skill access

This section provides the procedures for working with user permissions regarding splits/skills.

For users providing administration for splits/skills or running split/skill reports, it is necessary for them to have the proper split/skill permissions to perform their job functions.

Split/skill exceptions notification is also configured through this interface. Users who are given the *Exceptions* permission will be notified of split/skill exceptions when they occur.

This section contains the following topics:

- <u>Before you begin</u> on page 262
- <u>Permissions</u> on page 263
- Adding split/skill user permissions on page 263
- <u>Viewing split/skill user permissions</u> on page 264
- Listing all split/skill user permissions on page 265
- Modifying split/skill user permissions on page 266
- Deleting split/skill user permissions on page 267

Before you begin

The following items should be read and understood before working with split/skill permissions:

- A CMS user ID must be created through the **User Data** feature before split/skill permissions can be assigned.
- When a new user ID is created through the **User Data** feature, split/skill permission definitions for that user are not created. This is done to conserve disk space. When a split/ skill permissions definition does not exist for a user ID, *CMS* will deny *read* and *write* access to splits/skills.
- A user ID must first have permissions for the ACD on which the split/skill resides before split/skill permissions can be assigned. If a user ID is assigned split/skill permissions and does not have the appropriate ACD permissions, *Supervisor* displays an error message.
- A user ID cannot be assigned the *write* permission without first having the *read* permission.
- Assigning only those permissions that are necessary for each user ID ensures the best system performance.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view split/skill user permissions, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify split/skill user permissions, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** subsystem.

Adding split/skill user permissions

This section provides the procedure for adding a split/skill permissions definition for a *CMS* user.

Before you begin

The following items should be read and understood before adding a split/skill permissions definition for a *CMS* user:

- If a user does not have corresponding ACD permissions for the permissions set for them on the split/skill, *Supervisor* displays an error message.
- When the permissions definition for a user is created, the split/skill permissions do not take effect until the user logs off and back on again.

Steps

To add a split/skill permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Split/Skill Access**.
- 3. In the **ACD:** field, select the ACD or ACD Group containing the split/skill for which the user will be given permissions.
- 4. Select OK.

Supervisor displays the User Permissions Split/Skill Access window.

5. In the **User ID:** field, enter the name of the user who will be assigned split/skill permissions.

6. In the **Splits/Skills:** field, enter the name or number of the split/skill for which the user will have permissions assigned.

This field can accept multiple splits/skills. Multiple entries must be separated by a semicolon (;).

Multiple splits/skills can be entered by using a range, for example, 1-256.

- 7. Place a check mark in the permissions that will be assigned to this user:
 - **Read:** User can view but not modify information for the specified splits/skills including reports.
 - Write: User can modify information on the specified splits/skills. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified splits/skills.

Only the split/skill exceptions made active through the **Exceptions** feature will provide notification to the user. See <u>Administering exceptions</u> on page 193 for more information.

8. After assigning the necessary permissions, select **Actions > Add** from the menu bar.

The split/skill permissions for this user are saved.

It is possible to add permission definitions for multiple splits/skills at one time. To do so, enter multiple splits/skills in the **Splits/Skills:** field and separate them with semicolons (;).

Viewing split/skill user permissions

This section provides the procedure for viewing the split/skill permissions definition for a CMS user.

Before you begin

The following items should be read and understood before viewing split/skill permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions Split/Skill Access window.

Steps

To view the split/skill permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Split/Skill Access**.
- 3. In the **ACD:** field, select the ACD or ACD Group containing the split/skill for which the user has a permissions definition.

4. Select **OK**.

Supervisor displays the User Permissions Split/Skill Access window.

- 5. In the **User ID:** field, enter the name of the user for which the split/skill permissions definition is to be viewed.
- If the specific split/skill to view for this user is known, enter the name or number of the split/ skill in the Splits/Skills: field. To have all splits/skills returned for this user ID, leave this field blank.

This field can accept multiple splits/skills. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions > Find one**.

Supervisor queries the database and displays the number of matches found for this user ID in the status bar.

Listing all split/skill user permissions

This section provides the procedure for listing all of the user permission definitions for a split/ skill.

Before you begin

The following items should be read and understood before listing all split/skill permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions Split/Skill Access window.

Steps

To list all user permission definitions for a split/skill:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Split/Skill Access**.
- 3. In the **ACD**: field, select the ACD or ACD Group containing the split/skill for which all permission definitions will be shown.
- 4. Select OK.

Supervisor displays the User Permissions Split/Skill Access window.

5. From the menu bar, select **Actions > List all**.

Supervisor displays a secondary window listing all user permissions for splits/skills on the specified ACD.

A filter can be created when listing all user split/skill permission definitions. This filter is based on any information contained in the **User ID:** and **Splits/Skills:** fields on this dialog box when the **List all** action is performed.

For example, to view all of the user permission definitions for skill 26, enter 26 in the **Splits/Skills:** field before performing the **List all** action. This will cause only the user permission definitions for skill 26 to display. If more information is entered into the other fields of this dialog box, the results will be more restricted. If information for the user ID, splits/skills, and permissions are entered, the **List all** command will only return those permission definitions which match all of the information.

Modifying split/skill user permissions

This section provides the procedure for modifying the split/skill permissions definition for a CMS user.

Before you begin

The following items should be read and understood before modifying split/skill permissions:

- When the permissions definition for a user is modified, the change does not take effect until the user logs off and back on again.
- If a user does not have corresponding ACD permissions for the permissions set for them on the split/skill, *Supervisor* displays an error message.
- The wildcard characters * and ? cannot be used in the User Permissions Split/Skill Access window.

Steps

To modify the split/skill permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Split/Skill Access**.
- In the ACD: field, select the ACD or ACD Group containing the split/skill for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions Split/Skill Access window.

5. In the **User ID:** field, enter the name of the user for which the split/skill permissions definition is to be modified.

6. If the specific split/skill to view for this user is known, enter the name or number of the split/ skill in the **Splits/Skills:** field. For all splits/skills to be returned for this user ID, leave this field blank.

This field can accept multiple splits/skills. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions > Find one**.

Supervisor queries the database and displays the number of matches found for this user ID in the status bar.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct split/skill.

- 8. Change the permissions for the user on this split/skill as needed:
 - Read: User can view but not modify information for the specified splits/skills including reports.
 - Write: User can modify information on the specified splits/skills. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified splits/skills.

A Important:

If all permissions are to be removed for this user ID, it saves more server disk space to delete this permission definition rather than disabling all permissions. See Deleting split/skill user permissions on page 267 for more information.

Only the split/skill exceptions made active through the **Exceptions** feature will provide notification to the user. See Administering exceptions on page 193 for more information.

 After the necessary permission changes have been completed, select Actions > Modify from the menu bar.

The permissions definition for this user ID and split/skill is updated. The status bar displays a **Successful** message.

Deleting split/skill user permissions

This section provides the procedure for deleting the split/skill permissions definition for a CMS user.

Steps

To delete the split/skill permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Split/Skill Access**.
- 3. In the **ACD:** field, select the ACD or ACD Group containing the split/skill for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions Split/Skill Access window.

- 5. In the **User ID:** field, enter the name of the user for which the split/skill permissions definition is to be deleted.
- 6. If the specific split/skill to view for this user is known, enter the name or number of the split/ skill in the **Splits/Skills:** field. To return all split/skills for this user ID, leave this field blank.
- 7. From the menu bar, select **Actions** > **Find one**.

Supervisor queries the database and displays the number of matches found for this user ID in the status bar.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct split/skill.

8. From the menu bar, select **Actions > Delete**.

Supervisor deletes the permissions definition for this user ID and the associated split/skill. The status bar displays a **Successful** message upon completion of the action.

This action does not delete the permission definitions for all splits/skills for this user, only the one displayed in the **Splits/Skills:** field.

Trunk group access

Trunk group permissions allow users to view data for trunk group reports, view trunk group configuration information, and change trunk group configurations. The **User Permissions Trunk Group Access** window is also used to configure which users receive exception notifications.

This section contains the following topics:

- <u>Before you begin</u> on page 269
- <u>Permissions</u> on page 269
- <u>Adding trunk group user permissions</u> on page 269
- <u>Viewing trunk group user permissions</u> on page 271
- Listing all trunk group user permissions on page 271
- Modifying trunk group user permissions on page 272
- <u>Deleting trunk group user permissions</u> on page 274

Before you begin

The following items should be read and understood before working with trunk group permissions:

- A *CMS* user ID must be created through the **User Data** feature before it can be assigned trunk group permissions.
- When a new user ID is created through the **User Data** feature, trunk group permission definitions for that user are not created. This is done to conserve disk space. When a trunk group permissions definition does not exist for a user ID, *CMS* will deny *read* and *write* access to trunk groups.
- A user ID must first have permissions for the ACD on which the trunk group resides before trunk group permissions can be assigned. If a user ID is assigned trunk group permissions and does not have the appropriate ACD permissions, *Supervisor* displays an error message.
- A user ID cannot be assigned the *write* permission without first having the *read* permission.
- Assigning only those permissions that are necessary for each user ID ensures the best system performance.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view trunk group user permissions, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify trunk group user permissions, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** subsystem.

Adding trunk group user permissions

This section provides the procedure for adding a trunk group permissions definition for a *CMS* user.

Before you begin

The following items should be read and understood before adding a trunk group permissions definition for a *CMS* user:

• If a user does not have corresponding ACD permissions for the permissions set for them on the trunk group, *Supervisor* displays an error message.

• When the permissions definition for a user is created, the trunk group permissions do not take effect until the user logs off and back on again.

Steps

To add a trunk group permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Trunk Group Access**.
- 3. In the **ACD:** field, select the ACD containing the trunk group for which the user will be given permissions.
- 4. Select OK.

Supervisor displays the User Permissions Trunk Group Access window.

- 5. In the **User ID:** field, enter the name of the user who will be assigned trunk group permissions.
- 6. In the **Trunk Groups:** field, enter the name or number of the trunk group for which the user will have permissions assigned.

This field can accept multiple trunk groups. Multiple entries must be separated by a semicolon (;).

- 7. Place a check mark in the permissions that will be assigned to this user:
 - **Read:** User can view but not modify information for the specified trunk groups including reports.
 - Write: User can modify information on the specified trunk groups. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified trunk groups.

Only the trunk group exceptions made active through the **Exceptions** feature will provide notification to the user. See <u>Administering exceptions</u> on page 193 for more information.

8. After assigning the necessary permissions, select **Actions > Add** from the menu bar.

The trunk group permissions for this user are saved.

It is possible to add permission definitions for multiple trunk groups at one time. To do so, enter multiple trunk groups in the **Trunk Groups:** field and separate them with semicolons (;).

Viewing trunk group user permissions

This section provides the procedure for viewing the trunk group permissions definition for a *CMS* user.

Before you begin

The following items should be read and understood before viewing trunk group permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions Trunk Group Access window.

Steps

To view the trunk group permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the Operations: list, highlight Trunk Group Access.
- 3. In the **ACD:** field, select the ACD containing the trunk group for which the user has a permissions definition.
- 4. Select **OK**.

Supervisor displays the User Permissions Trunk Group Access window.

- 5. In the **User ID:** field, enter the name of the user for which the trunk group permissions definition is to be viewed.
- 6. If the specific trunk group to view for this user is known, enter the name or number of the trunk group in the **Trunk Groups:** field. To have all trunk groups returned for this user ID, leave this field blank.

This field can accept multiple trunk groups. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions > Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar.

Listing all trunk group user permissions

This section provides the procedure for listing all of the user permission definitions for a trunk group.

Before you begin

The following items should be read and understood before listing all trunk group permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions Trunk Group Access window.

Steps

To list all user permission definitions for a trunk group:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Trunk Group Access**.
- 3. In the **ACD**: field, select the ACD containing the trunk group for which all permission definitions will be shown.
- 4. Select OK.

Supervisor displays the User Permissions Trunk Group Access window.

5. From the menu bar, select **Actions** > **List all**.

Supervisor displays a secondary window listing all user permissions for trunk groups on the specified ACD.

A filter can be created when listing all user trunk group permission definitions. This filter is based on any information contained in the **User ID:** and **Trunk Groups:** fields on this dialog box when the **List all** action is performed.

For example, to view all of the user permission definitions for trunk group 4, enter 4 in the **Trunk Groups:** field before performing the List all action. This will cause only the user permission definitions for trunk group 4 to display. If more information is entered into the other fields of this dialog box, the results will be more restricted. If information for the user ID, trunk groups, and permissions are entered, the **List all** command will only return those permission definitions which match all of the information.

Modifying trunk group user permissions

This section provides the procedure for modifying the trunk group permissions definition for a *CMS* user.

Before you begin

The following items should be read and understood before modifying trunk group permissions:

• When the permissions definition for a user is modified, the change does not take effect until the user logs off and back on again.

- If a user does not have corresponding ACD permissions for the permissions set for them on the trunk group, *Supervisor* displays an error message.
- The wildcard characters * and ? cannot be used in the User Permissions Trunk Group Access window.

Steps

To modify the trunk group permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Trunk Group Access**.
- 3. In the **ACD:** field, select the ACD containing the trunk group for which the user has a permissions definition.
- 4. Select **OK**.

Supervisor displays the User Permissions Trunk Group Access window.

- 5. In the **User ID:** field, enter the name of the user for which the trunk group permissions definition is to be modified.
- If the specific trunk group to view for this user is known, enter the name or number of the trunk group in the **Trunk Groups:** field. To have all trunk groups returned for this user ID, leave this field blank.

This field can accept multiple trunk groups. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions > Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar. The first match found populates the fields of this dialog box.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct trunk group.

- 8. Change the permissions for the user on this trunk group as needed:
 - **Read:** User can view but not modify information for the specified trunk groups including reports.
 - Write: User can modify information on the specified trunk groups. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified trunk groups.

A Important:

If all permissions are to be removed for this user ID, it saves more server disk space to delete this permission definition rather than disabling all permissions.

Only the trunk group exceptions made active through the **Exceptions** feature will provide notification to the user. See Administering exceptions on page 193 for more information.

 After the necessary permission changes have been completed, select Actions > Modify from the menu bar.

The permissions definition for this user ID and trunk group is updated. The status bar displays a **Successful** message upon completion.

Deleting trunk group user permissions

This section provides the procedure for deleting the trunk group permissions definition for a *CMS* user.

Steps

To delete the trunk group permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the Operations: list, highlight Trunk Group Access.
- 3. In the **ACD:** field, select the ACD containing the trunk group for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions Trunk Group Access window.

- 5. In the **User ID:** field, enter the name of the user for which the trunk group permissions definition is to be deleted.
- If the specific trunk group to view for this user is known, enter the name or number of the trunk group in the **Trunk Groups:** field. To return all trunk groups for this user ID, leave this field blank.
- 7. From the menu bar, select **Actions** > **Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar. The first match found populates the fields of this dialog box.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct trunk group.

8. From the menu bar, select **Actions > Delete**.

The permissions definition for this user ID and the associated trunk group is deleted. The status bar displays a **Successful** message upon completion of the action.

This action does not delete the permission definitions for all trunk groups for this user, only the one displayed in the **Trunk Groups:** field.

Vector access

Vector permissions allow users to view data for vector reports, view vector configuration information, and change vector configurations. The **User Permissions Vector Access** window is also used to configure which users receive exception notifications.

This feature is not available if the *Vectoring* product has not been purchased and installed.

This section contains the following topics:

- <u>Before you begin</u> on page 275
- <u>Permissions</u> on page 276
- <u>Adding vector user permissions</u> on page 276
- Viewing vector user permissions on page 277
- Listing all vector user permissions on page 278
- Modifying vector user permissions on page 279
- <u>Deleting vector user permissions</u> on page 280

Before you begin

The following items should be read and understood before working with vector permissions:

- A *CMS* user ID must be created through the **User Data** feature before it can be assigned vector permissions.
- When a new user ID is created through the **User Data** feature, vector permission definitions for that user are not created. This is done to conserve disk space. When a vector permissions definition does not exist for a user ID, *CMS* will deny *read* and *write* access to vectors.
- A user ID must first have permissions for the ACD on which the vector resides before vector permissions can be assigned. If a user ID is assigned vector permissions and does not have the appropriate ACD permissions, *Supervisor* displays an error message.

- A user ID cannot be assigned the *write* permission without first having the *read* permission.
- Assigning only those permissions that are necessary for each user ID ensures the best system performance.
- A user must be given the *exceptions* permission in order to be notified of vector exceptions that occur.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view vector user permissions, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify vector user permissions, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** subsystem.

Adding vector user permissions

This section provides the procedure for adding a vector permissions definition for a CMS user.

Before you begin

The following items should be read and understood before adding a vector permissions definition for a *CMS* user:

- If a user does not have corresponding ACD permissions for the permissions set for them on the vector, *Supervisor* displays an error message.
- When the permissions definition for a user is created, the vector permissions do not take effect until the user logs off and back on again.

Steps

To add a vector permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Vector Access**.
- 3. In the **ACD**: field, select the ACD containing the vector for which the user will be given permissions.
- 4. Select OK.

Supervisor displays the User Permissions Vector Access window.

- 5. In the **User ID:** field, enter the name of the user who will be assigned vector permissions.
- 6. In the **Vectors:** field, enter the name or number of the vector for which the user will have permissions assigned.

This field can accept multiple vectors. Multiple entries must be separated by a semicolon (;).

- 7. Place a check mark in the permissions that will be assigned to this user:
 - **Read:** User can view but not modify information for the specified vectors including reports.
 - Write: User can modify information on the specified vectors. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified vectors.

Only the vector exceptions made active through the **Exceptions** feature will provide notification to the user. See <u>Administering exceptions</u> on page 193 for more information.

8. After assigning the necessary permissions, select **Actions > Add** from the menu bar.

The vector permissions for this user are saved.

It is possible to add permission definitions for multiple vectors at one time. To do so, enter multiple vectors in the **Vectors:** field and separate them with semicolons (;).

Viewing vector user permissions

This section provides the procedure for viewing the vector permissions definition for a *CMS* user.

Before you begin

The following items should be read and understood before viewing vector permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions Vector Access window.

Steps

To view the vector permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Trunk Group Access**.
- 3. In the **ACD:** field, select the ACD containing the vector for which the user has a permissions definition.

4. Select **OK**.

Supervisor displays the User Permissions Vector Access window.

- 5. In the **User ID:** field, enter the name of the user for which the vector permissions definition is to be viewed.
- 6. If the specific vector to view for this user is known, enter the name or number of the vector in the **Vectors:** field. To have all vectors returned for this user ID, leave this field blank.

This field can accept multiple vectors. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions** > **Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar.

Listing all vector user permissions

This section provides the procedure for listing all of the user permission definitions for a vector.

Before you begin

The following items should be read and understood before listing all vector permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions Vector Access window.

Steps

To list all user permission definitions for a vector:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Vector Access**.
- 3. In the **ACD:** field, select the ACD containing the vector for which all permission definitions will be shown.
- 4. Select OK.

Supervisor displays the User Permissions Vector Access window.

5. From the menu bar, select **Actions > List all**.

Supervisor displays a secondary window listing all user permissions for vectors on the specified ACD.

A filter can be created when listing all user vector permission definitions. This filter is based on any information contained in the fields on this dialog box when the **List all** action is performed.

For example, to view all of the user permission definitions for vector 1, enter 1 in the **Vectors:** field before performing the **List all** action. This will cause only the user permission definitions for vector 1 to display. If more information is entered into the other fields of this dialog box, the results will be more restricted. If information for the user ID, vectors, and permissions are entered, the **List all** command will only return those permission definitions which match all of the information.

Modifying vector user permissions

This section provides the procedure for modifying the vector permissions definition for a CMS user.

Before you begin

The following items should be read and understood before modifying vector permissions:

- When the permissions definition for a user is modified, the change does not take effect until the user logs off and back on again.
- If a user does not have corresponding ACD permissions for the permissions set for them on the vector, *Supervisor* displays an error message.
- The wildcard characters * and ? cannot be used in the User Permissions Vector Access window.

Steps

To modify the vector permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Vector Access**.
- 3. In the **ACD**: field, select the ACD containing the vector for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions Vector Access window.

5. In the **User ID:** field, enter the name of the user for which the vector permissions definition is to be modified.

6. If the specific vector to view for this user is known, enter the name or number of the vector in the **Vectors:** field. To have all vectors returned for this user ID, leave this field blank.

This field can accept multiple vectors. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions** > **Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar. The first match found populates the fields of this dialog box.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct vector.

- 8. Change the permissions for the user on this vector as needed:
 - Read: User can view but not modify information for the specified vectors including reports.
 - Write: User can modify information on the specified vectors. This permission requires that the user also have the *read* permission.
 - Exceptions: User will receive notification of exceptions occurring on the specified vectors.

Important:

If all permissions are to be removed for this user ID, it saves more server disk space to delete this permission definition rather than disabling all permissions.

Only the vector exceptions made active through the **Exceptions** feature will provide notification to the user. See Administering exceptions on page 193 for more information.

9. After the necessary permission changes have been completed, select **Actions** > **Modify** from the menu bar.

The permissions definition for this user ID and vector is updated. The status bar displays a **Successful** message upon completion.

Deleting vector user permissions

This section provides the procedure for deleting the vector permissions definition for a *CMS* user.

Steps

To delete the vector permissions definition for a CMS user:

- On the Controller window, select Tools > User Permissions.
 Supervisor displays the User Permissions window.
- 2. In the **Operations:** list, highlight **Vector Access**.

- 3. In the **ACD:** field, select the ACD containing the vector for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions Vector Access window.

- 5. In the **User ID:** field, enter the name of the user for which the vector permissions definition is to be deleted.
- 6. If the specific vector to view for this user is known, enter the name or number of the vector in the **Vectors:** field. To return all vectors for this user ID, leave this field blank.
- 7. From the menu bar, select **Actions** > **Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar. The first match found populates the fields of this dialog box.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct vector.

8. From the menu bar, select **Actions > Delete**.

The permissions definition for this user ID and the associated vector is deleted. The status bar displays a successful message upon completion of the action.

This action does not delete the permission definitions for all vectors for this user, only the one displayed in the **Vectors:** field.

VDN access

Vector Directory Number (VDN) permissions allow users to view data for VDN reports, view VDN configuration information, and change VDN configurations. The **User Permissions VDN Access** window is also used to configure which users receive exception notifications.

This feature is not available if the Vectoring product has not been purchased, installed, and enabled on the corresponding ACD.

This section contains the following topics:

- <u>Before you begin</u> on page 282
- <u>Permissions</u> on page 282
- Adding VDN user permissions on page 282
- <u>Viewing VDN user permissions</u> on page 283
- Listing all vector user permissions on page 278
- Modifying vector user permissions on page 279
- <u>Deleting VDN user permissions</u> on page 287

Before you begin

The following items should be read and understood before working with VDN permissions:

- A *CMS* user ID must be created through the **User Data** feature before it can be assigned VDN permissions.
- When a new user ID is created through the **User Data** feature, VDN permission definitions for that user are not created. This is done to conserve disk space. When a VDN permissions definition does not exist for a user ID, *CMS* denies *read* and *write* access to VDNs.
- A user ID must first have permissions for the ACD on which the VDN resides before VDN permissions can be assigned. If a user ID is assigned VDN permissions and does not have the appropriate ACD permissions, *Supervisor* an error message.
- A user ID cannot be assigned the *write* permission without first having the *read* permission.
- Assigning only those permissions that are necessary for each user ID ensures the best system performance.
- A user must be given the *exceptions* permission in order to be notified of VDN exceptions that occur.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view VDN user permissions, the user ID used to log in to this *Supervisor* session requires *read* permission for the **User Permissions** subsystem.
- To add, delete, or modify VDN user permissions, the user ID used to log in to this *Supervisor* session requires *write* permission for the **User Permissions** subsystem.

Adding VDN user permissions

This section provides the procedure for adding a VDN permissions definition for a CMS user.

Before you begin

The following items should be read and understood before adding a VDN permissions definition for a *CMS* user:

• If a user does not have corresponding ACD permissions for the permissions set for them on the VDN, *Supervisor* displays an error message.

• When the permissions definition for a user is created, the VDN permissions do not take effect until the user logs off and back on again.

Steps

To add a VDN permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **VDN Access**.
- 3. In the **ACD:** field, select the ACD containing the VDN for which the user will be given permissions.
- 4. Select OK.

Supervisor displays the User Permissions VDN Access window.

- 5. In the **User ID:** field, enter the name of the user who will be assigned VDN permissions.
- 6. In the **VDNs:** field, enter the name or number of the VDN for which the user will have permissions assigned.

This field can accept multiple VDNs. Multiple entries must be separated by a semicolon (;).

- 7. Place a check mark in the permissions that will be assigned to this user:
 - **Read:** User can view but not modify information for the specified VDNs including reports.
 - Write: User can modify information on the specified VDNs. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified VDNs.

Only the VDN exceptions made active through the **Exceptions** feature will provide notification to the user. See <u>Administering exceptions</u> on page 193 for more information.

8. After assigning the necessary permissions, select Actions > Add from the menu bar.

The VDN permissions for this user are saved.

It is possible to add permission definitions for multiple VDNs at one time. To do so, enter multiple VDNs in the **VDNs:** field and separate them with semicolons (;).

Viewing VDN user permissions

This section provides the procedure for viewing the VDN permissions definition for a CMS user.

Before you begin

The following items should be read and understood before viewing VDN permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions VDN Access window.

Steps

To view the VDN permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **Trunk Group Access**.
- 3. In the **ACD:** field, select the ACD containing the VDN for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions VDN Access window.

- 5. In the **User ID:** field, enter the name of the user for which the VDN permissions definition is to be viewed.
- 6. If the specific VDN to view for this user is known, enter the name or number of the VDN in the **VDNs:** field. To have all VDNs returned for this user ID, leave this field blank.

This field can accept multiple VDNs. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions > Find one**.

The database is queried and the number of matches found for this user ID is displayed in the status bar.

Listing all VDN user permissions

This section provides the procedure for listing all of the user permission definitions for a VDN.

Before you begin

The following items should be read and understood before listing all VDN permission definitions for *CMS* users:

• The wildcard characters * and ? cannot be used in the User Permissions VDN Access window.

Steps

To list all user permission definitions for a VDN:

1. On the Controller window, select **Tools** > **User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **VDN Access**.
- 3. In the **ACD:** field, select the ACD containing the VDN for which all permission definitions will be shown.
- 4. Select OK.

Supervisor displays the User Permissions VDN Access window.

5. From the menu bar, select **Actions > List all**.

Supervisor displays a secondary window listing all user permissions for VDNs on the specified ACD.

A filter can be created when listing all user VDN permission definitions. This filter is based on any information contained in the **User ID:** and **VDNs:** fields on this dialog box when the **List all** action is performed.

For example, to view all of the user permission definitions for VDN 10, enter 10 in the **VDNs:** field before performing the **List all** action. This will cause only the user permission definitions for VDN 10 to display. If more information is entered into the other fields of this dialog box, the results will be more restricted. If information for the user ID, VDNs, and permissions are entered, the **List all** command will only return those permission definitions which match all of the information.

Modifying VDN user permissions

This section provides the procedure for modifying the VDN permissions definition for a *CMS* user.

This feature is available if the following items are true:

- The Vectoring feature has been purchased and installed.
- VDN permission checking is enabled.

Before you begin

The following items should be read and understood before modifying VDN permissions:

- When the permissions definition for a user is modified, the change does not take effect until the user logs off and back on again.
- If a user does not have corresponding ACD permissions for the permissions set for them on the VDN, *Supervisor* displays an error message.

• The wildcard characters * and ? cannot be used in the User Permissions VDN Access window.

Steps

To modify the VDN permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **VDN Access**.
- 3. In the **ACD:** field, select the ACD containing the VDN for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions VDN Access window.

- 5. In the **User ID:** field, enter the name of the user for which the VDN permissions definition is to be modified.
- 6. If the specific VDN to view for this user is known, enter the name or number of the VDN in the **VDNs:** field. To have all VDNs returned for this user ID, leave this field blank.

This field can accept multiple VDNs. Multiple entries must be separated by a semicolon (;).

7. From the menu bar, select **Actions > Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar. The first match found populates the fields of this dialog box.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct VDN.

- 8. Change the permissions for the user on this VDN as needed:
 - **Read:** User can view but not modify information for the specified VDNs including reports.
 - Write: User can modify information on the specified VDNs. This permission requires that the user also have the *read* permission.
 - **Exceptions:** User will receive notification of exceptions occurring on the specified VDNs.

Important:

If all permissions are to be removed for this user ID, it saves more server disk space to delete this permission definition rather than disabling all permissions.

Only the VDN exceptions made active through the **Exceptions** feature will provide notification to the user. See <u>Administering exceptions</u> on page 193 for more information.

9. After the necessary permission changes have been completed, select **Actions** > **Modify** from the menu bar.

The permissions definition for this user ID and VDN is updated. The status bar displays a **Successful** message upon completion.

Deleting VDN user permissions

This section provides the procedure for deleting the VDN permissions definition for a CMS user.

Steps

To delete the VDN permissions definition for a CMS user:

1. On the Controller window, select **Tools > User Permissions**.

Supervisor displays the User Permissions window.

- 2. In the **Operations:** list, highlight **VDN Access**.
- 3. In the **ACD:** field, select the ACD containing the VDN for which the user has a permissions definition.
- 4. Select OK.

Supervisor displays the User Permissions VDN Access window.

- 5. In the **User ID:** field, enter the name of the user for which the VDN permissions definition is to be deleted.
- 6. If the specific VDN to view for this user is known, enter the name or number of the VDN in the **VDNs:** field. To return all VDNs for this user ID, leave this field blank.
- 7. From the menu bar, select **Actions** > **Find one**.

The database is queried and the number of matches found for this user ID displays in the status bar. The first match found populates the fields of this dialog box.

If multiple matches are found, use the **Next** and **Previous** items found under the **Action** menu to navigate to the correct VDN.

8. From the menu bar, select **Actions > Delete**.

The permissions definition for this user ID and the associated VDN is deleted. The status bar displays a **Successful** message upon completion of the action.

This action does not delete the permission definitions for all VDN for this user, only the one displayed in the **VDNs:** field.

Chapter 9: Administering user permissions

Chapter 10: Configuring CMS system settings

This section provides procedures on viewing and changing the setup of the *CMS* system configured during the initial installation. These configuration values are used in adjusting the state of the system and the collection, storage, and retrieval of data. Making changes to these configuration settings can affect system performance, disk space usage, and data collection.

This section contains the following topics:

- Before you begin on page 289
- CMS state on page 289
- Data collection on page 292
- Data Storage Allocation on page 294
- Data summarizing on page 300
- <u>External Application Status</u> on page 302
- Free Space Allocation on page 305
- Migrating CMS data on page 307
- Pseudo-ACDs on page 311
- Storage intervals on page 317
- <u>Switch setup</u> on page 323

Before you begin

If an ACD Group is selected as the current ACD in the **System Setup** window, only those operations that are valid for the ACD Group will appear in the **Operations:** list.

CMS state

CMS can run in two operational states:

• Multi-user mode - Any defined user can log on to CMS.

• Single-user mode - Only one user can be logged on to the CMS server at a time.

The single-user mode is necessary when changes must be made to the following systems and procedures:

- Change Master ACD
- Data storage allocation
- Storage intervals
- Restore specific types of data
- Migrate specific types of data

The **CMS State** window can be used to select which ACD serves as the master for time synchronization. The time displayed on the Controller window originates from the master ACD.

This section contains the following topics:

- Before you begin on page 290
- <u>Permissions</u> on page 290
- Changing the CMS state on page 291
- Changing the master ACD on page 291

Before you begin

The following items should be read and understood before changing the CMS state:

- *Viewing* data in the **Data Storage Allocation**, **Storage Intervals**, and **Restore Data** windows can be done through both the multi-user and single-user modes.
- To add to or modify configuration settings for the **Data Storage Allocation**, **Storage Intervals**, or **Restore Data** windows requires that the *CMS* state is set to single-user mode.
- If a log out is performed while *CMS* is still in the single-user state, at least ten seconds must pass before a logon can be performed.
- When in single-user mode, *CMS* continues to collect data for all ACDs with the data collection feature enabled.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To view the *CMS* state or the master ACD, the user ID used to log on to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.

• To modify the CMS state or the master ACD, the user ID used to log on to this Supervisor session requires write permission for the CMS System Setup feature.

Changing the CMS state

This section provides the procedure for changing the state of the *CMS* system to single-user or multi-user mode.

Steps

To change the current CMS state:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **CMS State**.
- 3. Select OK.

Supervisor displays the CMS State window.

- 4. Under CMS user mode:, select one of the following options:
 - **Single-user mode** Specifies that the CMS state is being set to single-user mode. When *CMS* is set to single-user mode, a message box displays to all users indicating that *CMS* will be brought down in one minute. Users are automatically logged off after one minute.
 - Multi-user mode Specifies that the CMS state is being set to allow multiple users to log on to CMS
- 5. After selecting the CMS user mode, select **Actions > Modify** from the menu bar.

If the CMS user mode is set to single-user, all CMS users are notified to log off. If the CMS user mode is set to multi-user, CMS users can again log on to the system.

Changing the master ACD

This section provides the procedure for selecting the master ACD which will be used for time synchronization.

Steps

Important:

Changing the master ACD requires that you turn data collection off.

To select the ACD which will serve as the master for time synchronization:

- From the Controller window, select Tools > System Setup....
 Supervisor displays the CMS System Setup window.
- 2. In the Operations: list, highlight CMS State.
- 3. Select OK.

Supervisor displays the CMS State window.

- 4. In the **Master ACD for clock synchronization:** field, select the ACD that will serve as the master for the synchronization of time for *CMS*.
- 5. After selecting the master ACD, select **Actions > Modify** from the menu bar.

The selected ACD is set as the master for time synchronization and the status bar displays a **Successful** message.

Data collection

The **Data Collection** window is used to enable and disable the storing of data for real ACDs. When data collection is disabled, no contact center data is recorded during the current interval. Also, reports run to include this time period will not accurately reflect the activities in the contact center.

This section contains the following topic:

- Before you begin on page 292
- Permissions on page 293
- <u>Changing the data collection state</u> on page 293

Before you begin

The following items should be read and understood before working with the data collection feature:

- When data collection is enabled, the connection status of the link should be monitored to ensure data is being transferred. Use the **Connection Status** feature in the **Maintenance** subsystem to view this information.
- The data collection feature does not apply for pseudo-ACDs as they do not collect data.
- When changing the data collection status, each ACD must be administered separately.
- Data collection must be disabled when making changes to the following features:
 - Data Storage Allocation

- Storage Intervals
- Change Master ACD
- Restore specific types of data
- Migrate specific types of data

Viewing data through the features listed above can be done with data collection enabled.

- Data collection must be enabled for the current ACD in order to activate an agent trace or do any switch administration from *CMS*.
- When data collection is disabled, no new data is collected. If calls are in the system, the data they generate is not recorded in *CMS*. If data collection is to be disabled, it is best to wait for the current interval to be archived so that data loss is minimized.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view **Data Collection** settings, the user ID used to log on to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.
- To modify the **Data Collection** settings, the user ID used to log on to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Changing the data collection state

This section provides the procedure for enabling or disabling data collection for an ACD.

Steps

1. On the Controller window, select Tools > System Setup....

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Data Collection**.
- 3. Select OK.

Supervisor displays the Data Collection window.

- 4. In the **ACD:** field, select the ACD which will have data collection turned on or off.
- 5. Under **Data collection:**, select one of the following options:
 - **On:** Enables data collection for the selected ACD.
 - Off: Disables data collection for the selected ACD.

Data Storage Allocation

The **Data Storage Allocation** window is used to specify the amount of historical data saved by *CMS* and the duration for which it is saved. The amount of data saved and the duration for which it is saved affects disk space on the server and is limited by the configuration of the system. Data storage parameters are initially set during installation.

This section contains the following topics:

- Before you begin on page 294
- <u>Permissions</u> on page 295
- Viewing Data Storage Allocation on page 295
- Modifying Data Storage Allocation on page 296

Before you begin

The following items should be read and understood before working with **Data Storage Allocation**:

- A full maintenance backup should be performed before changing the **Data Storage Allocation** configuration.
- If changes to the Communication Manager system are made through the swsetup command on the *CMS* console, the settings for **Data Storage Allocation** should be checked to ensure that storage is set for any new or modified entities. For example, enable the Call Vectoring feature requires data storage space for VDNs and vectors. Changing the release of the Communication Manager system may change the number of measured entities allowed and affect the storage allocation for each entity.
- Disable data collection for all real ACDs before making modifications through **Data Storage Allocation**.
- Set the *CMS* state to single-user mode before making modifications through **Data Storage Allocation**.
- When determining the amount of storage space needed, remember that future growth of items, such as trunk groups or splits/skills, need to be taken into account.
- For reference, print out the **Data Storage Allocation** window before modifications are made.
- If a Data Storage Allocation window is modifying data, do not open a second Data Storage Allocation window. Wait for the first window to finish the modifications as performing simultaneous modifications through two Data Storage Allocation windows can result in damage to data tables.

- Activating a feature such as vectoring requires not only changing switch parameters but also requires the allocation of space for VDNs and vectors which did not have space previously allocated.
- The amount of free space available on the server limits the maximum amount of storage space usable through **Data Storage Allocation**. Use the **Free Space Allocation** window to view the utilization of disk space before making changes to **Data Storage Allocation**. If changes are made to the **Data Storage Allocation** settings, free space is automatically adjusted.
- The length of the intrahour interval affects the amount of disk space required to store intrahour data. For example, an intrahour interval of 30 minutes requires twice the amount of disk space than an intrahour interval of 60 minutes.
- If the Call Vectoring feature has not been purchased and installed, the fields corresponding to call work codes, vectors, and VDNs are not displayed.
- The data storage values determine how much data is available for running historical reports. For example, if weekly and monthly data is not saved, weekly or monthly reports display no data.
- Disk space affects the amount of historical data that can be stored. The following list provides the maximum durations possible when storing historical data:
 - Intrahour 62 days
 - Daily 1825 days (5 years)
 - Weekly 520 weeks (10 years)
 - Monthly 120 months (10 years)

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view **Data Storage Allocation** settings, the user ID used to log on to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.
- To modify **Data Storage Allocation** settings, the user ID used to log on to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Viewing Data Storage Allocation

This section provides the procedure for viewing the **Data Storage Allocation** parameters.

Steps

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Data Storage Allocation**.
- 3. In the **ACD**: field, select the ACD for which the data storage settings will be viewed.
- 4. Select OK.

Supervisor displays the Data Storage Allocation window.

Modifying Data Storage Allocation

This section provides the definitions of the fields displayed in the **Data Storage Allocation** window and suggestions for determining the necessary values. The data storage configuration is performed on a per-ACD basis. In a multi-ACD environment, data storage allocation should not be set too high as it can exceed disk capacity for storing information for the other ACDs.

Before you begin

Before modifying the configuration of the **Data Storage Allocation** window, the following must occur:

- Data collection for all real ACDs must be disabled.
- The CMS state must be set to single-user mode.
- A full maintenance backup should be performed before changing the **Data Storage Allocation** configuration.

Data storage allocation needs vary among installations. Base your *CMS* data storage needs on these criteria:

- The available disk space on your CMS system
- The number of real and pseudo-ACDs on the CMS system
- The size of the real ACDs and all pseudo-ACDs, such as number of agents, trunks, and so forth.
- The length of time for data to be stored. For example, 30 days versus 100 days versus two years.

Fields

The following table lists the fields found on the **Data Storage Allocation** window. Several of these data storage parameter limits are documented in *Avaya Aura*[™] *Communication Manager System Capacities Table.*

Field	Description	
Data Item	Lists the maximum number of splits/skills, trunk groups, trunks, call work codes, vectors, and VDNs allowed for the system.	
# of Items	The number of splits/skills, trunk groups, trunks, call work codes, vectors, and VDNs for which data storage space should be allocated. When this window is initially displayed, these fields display the number of currently administered data items. These numbers should include expected growth. For example, a 30 in this field for Splits/Skills indicates that storage space is allocated for 30 splits/skills. The system may have only 25 splits/skills in existence, but this number allows for future growth.	
Days of Intrahour	The number of days where the system stores intrahour data for splits/ skills, agents, trunk groups, trunks, call work codes, vectors, and VDNs. Each entity can have a different number of days associated with it. A 0 (zero) in this field causes the system to discard intrahour data which also means that no daily, weekly, or monthly data can be collected. When data collection reaches the end of the length of time specified, the data is combined, archived, and appended into daily information.	
Days of Daily	The number of days for which the system stores daily data for splits/ skills, agents, trunk groups, trunks, call work codes, vectors, and VDNs. Each entity can have a different number of days associated with it. A 0 (zero) in this field causes the system to discard daily data which also means that no daily or weekly data can be collected. When data collection reaches the end of the length of time specified, the data is combined, archived, and appended into weekly information.	
Weeks of Weekly	The number of weeks for which the system stores weekly data for splits/ skills, agents, trunk groups, trunks, call work codes, vectors, and VDNs. Each entity can have a different number of weeks associated with it. A 0 (zero) in this field causes the system to discard weekly data. When data collection reaches the end of the length of time specified, the data is combined, archived, and appended into monthly information.	

Field	Description	
Months of Monthly	The number of months for which the system stores monthly data for splits/skills, agents, trunk groups, trunks, call work codes, vectors, and VDNs.	
	Each entity can have a different number of months associated with it.	
	A 0 (zero) in this field causes the system to discard monthly data.	
	When data collection reaches the end of the length of time specified, the data is deleted.	
Shift <i>n</i> times (1, 2, 3, or 4)	The shift start and stop times for each shift of agents (up to four shifts) for the specified ACD. This information is used to calculate the amount of space to be reserved for this historical agent table. Shifts may overlap.	
	If you specify a shift that starts before the data collection start time or ends after the data collection stop time, you receive an error message. The data collection start and stop times are found in the Storage Intervals window in System Setup .	
	<i>CMS</i> rounds shift times to the nearest interval. For example, if you use 30-minute intervals and specify a shift from 8:15 to 5:15, <i>CMS</i> assumes that this shift is from 8:00 to 5:30.	
	Shift must be at least one minute in length.	
	Specify 24-hour shifts according to the following example:	
	8:00AM to 7:59AM	
	This information is used throughout CMS.	
Maximum agents logged in	The maximum number of agents logged in during the shift	
Total split/skill members, summed over all splits/skills	The maximum number of agents or extensions across all splits/skills that are measured or logged in at any one time.	
	This number should include those agents or extensions that are members of multiple splits/skills. For this field, each split/skill the agent belongs to counts as a split/skill member. Using this method of determining members results in a higher number than the number of agents.	
	For Communication Manager systems without Expert Agent Selection (EAS), this value represents the maximum number of administered split members.	
	For Communication Manager systems with EAS, this value represents the maximum agent/skill pairs (skill members) that are logged in.	

Field	Description	
Number of agent login/ logout records	The number of agent login/logout records stored by the system. Each time an agent logs in, the system creates a login/logout record. The subsequent logout of the agent also uses this same record. If, at a later time, the agent logs in again, another login/logout record is created.	
	The following equation demonstrates how this number is calculated:	
	(Number of agents) x (Number of times each agent logs in each day) = Number of agent login/logout records	
	If there are 200 agents and each agent logs in three times per day, using the equation above would result in 600 agent login/logout records for this field.	
	When skills for an agent are changed, a new login/logout record is generated if the agent is currently logged in to the system.	
Number of agent trace records	The number of agent trace records for the currently specified ACD. This number is not representative of all ACDs.	
Number of	The number of trunks not measured by the CMS system.	
unmeasured trunk facilities	An unmeasured trunk facilities are used for:	
	 Internal calls (intraswitch) to a measured split or agent 	
	 Internal calls to VDNs 	
	 Calls made by agents to internal destinations or using a trunk group that is not measured 	
	• Transfers and conferences until the transfer/conference is complete	
	This number should be set high enough to handle the traffic expected over these unmeasured trunks, but cannot exceed the maximum number of trunks minus the number of measured trunks. The default value for this field is 300.	
Number of exception records	The total number of exceptions stored for <i>CMS</i> . This total is for each type of exception, such as agents, splits/skills, VDNs, and so forth.	
Number of call	The number of call records the system stores for a selected ACD.	
records	If the Avaya CMS Call History Interface product has been purchased and installed, another computer can be used for storage and analysis of the call records. This field then represents the amount of buffer space set aside on the <i>CMS</i> server that is used to collect the call records prior to transmission to the other system.	

Data summarizing

Data is automatically archived based on the entries in the Storage Intervals window. The Data Summarizing window is used to manually archive data in the daily, weekly, and monthly tables of the historical database.

This section contains the following topic:

- Before you begin on page 300
- Permissions on page 301 •
- Archiving data on page 301

Before you begin

The following items should be read and understood before working with the **Data Summarizing** window:

Important:

Since data is automatically archived based on the entries in the Storage Intervals window, this tool *must not* be used unless an archive failed or did not occur.

- Using the **Data Summarizing** window causes the archiving to happen immediately.
- Multiple data summarizing requests are queued and are run in the order requested.
- Automatic daily, weekly, and monthly data summaries are queued along with manual requests so that just one type of data summarizing occurs at a time.
- Adequate storage space must be made available through the **Data Storage Allocation** window before archiving can occur.
- A manual archive cannot be performed unless data exists in the daily, weekly, or monthly tables. If a day of data is missing within the period you are attempting to manually archive, the archive will fail.
- Results of daily, weekly, and monthly archives can be viewed through the Error Log Report • or the Archiving Status window.
- If CMS is not operational when an automatic archive should occur, an error message is logged which indicates that a manual archive should be performed using the Data Summarizing window.
- If an incomplete week or month is specified as a date, data summarizing will not occur. Partial weekly or monthly data cannot be summarized.

• For example, if a week is configured in the **Storage Intervals** window as being Monday through Friday, entering a date which falls on Saturday in the **Data Summarizing** window results in the week previous to the date specified being archived.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the **Data Summarizing** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.
- To use the **Data Summarizing** window to perform an archive of the system, the user ID used to log in to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Archiving data

This section provides the procedure for manually archiving data using the **Data Summarizing** window.

Steps

To archive data with the **Data Summarizing** window:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Data Summarizing**.
- 3. Select OK.

Supervisor displays the Data Summarizing window.

- 4. In the **ACD**: field, select the ACD for which data will be archived.
- 5. In the **Data type:** field, select the appropriate option:
 - **Daily** Archives data for one day. A daily summary archives a partial day. Daily summaries must be complete for each day of the week or month before *CMS* archives the data for that week or month
 - Weekly Archives data for one week. A weekly summary must be requested by entering a date that falls within a completed predefined week. See the weekly configuration in the Storage Intervals window.
 - **Monthly** Archives data for one month. Set any day during the month in a completed month for which monthly data should be summarized.

6. From the menu bar, select **Actions** > **Run**.

Supervisor displays a warning message stating that data archiving is a lengthy process and cannot be cancelled. Through this window, it is possible to cancel the data archive, otherwise the process continues when the message box is dismissed.

Archiver started displays on the status line for the first request and Archiver request submitted displays if a data summary is currently in progress.

External Application Status

The **External Application Status** feature, a separately purchased option for *CMS*, sends real-time data to an external device or to an external program.

The types of external devices or programs used with the **External Application Status** feature can consist of the following:

- A wallboard This is a large display placed in a contact center where all agents can view data. This data can consist of the number of calls in the queue, calls being handled by different splits/skills, and other information.
- An employee scheduler program This third-party software is used to compare the start and end times for agents with schedules created by management.
- A contact center data consolidation program This third-party software is used to collect data from all contact centers for reporting purposes.

This section contains the following topics:

- Before you begin on page 302
- Permissions on page 303
- Enabling or disabling the External Application Status feature on page 303
- <u>Viewing the states of external applications</u> on page 303
- Starting or stopping external applications on page 304

Before you begin

The following items should be read and understood before working with the **External Application Status** feature:

 In the United States, external applications are designed and administered by the Avaya Professional Services Organization. For more information about external applications, call Avaya Contact Center CRM Solutions at 1-877-927-6662. For assistance outside the United States, contact your local Avaya distributor or representative.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view **External Application Status** data, the user ID used to log in to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.
- To enable or disable the **External Application Status** feature, and start or stop external applications, the user ID used to log in to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Enabling or disabling the External Application Status feature

This section provides the procedure for enabling or disabling the **External Application Status** feature. This feature must be enabled before external applications can be started. Disabling this feature will cause *CMS* to stop sending data and the external applications cannot be viewed.

Steps

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **External Application Status**.
- 3. Select OK.

Supervisor displays the External Application Status window.

- 4. In the External Application (Select one): group, select the External application feature (turns on/off all applications) option.
- 5. Select the appropriate option from the **Application status (Select one):** group:
 - Start This option will enable the External Application Status feature.
 - Stop This option will disable the External Application Status feature.
- 6. From the menu bar, select **Actions > Modify**.

The status bar displays a message indicating if the action succeeded or failed.

Viewing the states of external applications

This section provides the procedure for viewing the state of one or more external applications through the **External Application Status** window.

Steps

To view the states of any external applications:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **External Application Status**.
- 3. Select OK.

Supervisor displays the External Application Status window.

- 4. In the External Applications (Select one): group, select External application feature (turns on/off all applications).
- 5. From the menu bar, select **Actions > List all**.

Supervisor displays a secondary window displaying one or more applications, their names, and the associated states depending on which option was selected in the step above.

The status of an external application can be one of the following:

- Starting A request to start the external application has been made.
- **Running** The external application has started and is still running after ten seconds.
- Stopping A request to stop the external application has been made.
- **Stopped** All processes associated with the external application have stopped.
- **Failed** The external application has failed repeatedly and is no longer being restarted.

Starting or stopping external applications

This section provides the procedure for starting and stopping external applications through the **External Application Status** window.

Steps

To start or stop an external application:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **External Application Status**.
- 3. Select OK.

Supervisor displays the External Application Status window.

4. Select the **Application name:** option and enter the name of the application to start or stop in the adjacent field.

- 5. In the **Application status (Select one):** group, select the appropriate option:
 - Start Supervisor will attempt to start the specified external application.
 - Stop Supervisor will attempt to stop the specified external application.
- 6. From the menu bar, select **Actions > Modify**.

Supervisor attempts to carry out the specified action. The status bar displays the results of the action.

The information that displays in the status bar after this step can consist of the following.

- Starting A request to start the external application has been made.
- **Running** The external application has started and is still running after ten seconds.
- **Stopping** A request to stop the external application has been made.
- **Stopped** All processes associated with the external application have stopped.
- **Failed** The external application has failed repeatedly and is no longer being restarted.

Free Space Allocation

The **Free Space Allocation** window is used to view the current storage statistics and disk usage for the contact center data collected through *CMS*.

If, at any time, you modify the **Data Storage Allocation** configuration, **Free Space Allocation** will automatically adjust the amount of required space.

This section contains the following topics:

- <u>Before you begin</u> on page 306
- <u>Permissions</u> on page 306
- Viewing Free Space Allocation on page 306
- <u>Viewing Free Space Allocation contents</u> on page 307

Before you begin

The following items should be read and understood before working with the **Free Space Allocation** feature:

- When any of the CMS data storage parameters are altered, the change is reflected (for information purposes only) in the Free Space Allocation window. For example, if the number of splits/skills on your system is increased in the Data Storage Allocation window, the Free Space Allocation window will then display the new number as well as the approximate amount of disk space required to handle the data storage for splits/skills.
- The IDS dbspaces used in the **Free Space Allocation** window are created during installation.
- Be aware that creating custom tables causes *CMS* to use more disk space. If dbspace is used to store custom tables nears capacity, you are presented with a warning message during login.
- Values entered in the CMS System Setup features of Data Storage Allocation, Storage Intervals, and Call Work Codes directly affect usage of disk space. Check Free Space Allocation when any of these features are modified.
- Values entered in the **Data Storage Allocation** window of **Forecast Administration** also affect storage space.

Permissions

To view the **Free Space Allocation** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.s

Viewing Free Space Allocation

This section provides the procedure for viewing the Informix Dynamic Server (IDS) storage information and allocations through the **Free Space Allocation** window.

Steps

To view the usage of data storage for ACD:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

2. In the **Operations:** list, highlight **Free Space Allocation**.

3. Select **OK**.

Supervisor displays the Free Space Allocation input window for each ACDs:

- ACD Name The name assigned to this ACD.
- Allocated Size The amount of space needed to store data based on the settings in the Data Storage Allocation window
- Space used to Date The amount of data actually stored at this time

The window may take a few minutes to open as CMS is calculating the current free space and other values on the system before the window can be displayed.

Viewing Free Space Allocation contents

This section provides the procedure for viewing the allocations for each contact center entity within an ACD.

Steps

To view the amount of storage used by contact center entities within an ACD:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Free Space Allocation**.
- 3. Select OK.

Supervisor displays the Free Space Allocation input window.

Note:

The window make take a few minutes to open as *CMS* is calculating the current free space before the window can be displayed.

- 4. In the ACD field, enter the name or number of the ACD to view.
- 5. From the menu bar, select **Actions > Get contents**.

Supervisor displays a secondary window showing the amount of data currently in use by each contact center entity.

Migrating CMS data

This section provides the procedures and information involved in migrating data from a backup device that was created using a previous version of *CMS* and into the database of the new *CMS*.

This section contains the following topic:

- <u>Before you begin</u> on page 308
- Permissions on page 308
- Migrating R3 data on page 308

Before you begin

The following items should be read and understood before working with the **R3 Migrate Data** window:

- Attempting to migrate **Agent** and **Call Center Administration** data more once may cause serious errors from which recovery is difficult. A re-migration of ACD administration data requires a second setup of the *CMS* software must be performed.
- To migrate **Agent** and **Call Center Administration** data, *CMS* must be in single-user mode.
- Migrations of system administration data cannot be done in phases. Migrating some user IDs at one time and others at a later time results in two separate sets of data. Only one set of data can be used and cannot be migrated into another set.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To run the **R3 Migrate Data** process, the user ID used to log in to this *Supervisor* session requires *write* permission for **CMS System Setup**.

Migrating R3 data

This section provides the procedure for using the **R3 Migrate Data** to merge data created using a previous version of *CMS* to the database of the current version.

Steps

To migrate R3 data into the current database:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

2. In the **Operations:** list, highlight **R3 Migrate Data**.

3. Select OK.

Supervisor displays the R3 Migrate Data window.

4. In the **Device name:** field, enter the name of the backup device containing the data.

To list all devices on the system, select **Actions > List devices**.

If you choose the **System Administration data** option in this step, note that this migration can only be performed once. Performing the migration of this data a second time can result in corruption of the password tables.

5. In the **Data type:** group, select one of the following three options:

Data type	Migrated data
System Administration data (single user required)	Report GEM files (historical) Report GEM files (real-time) Shortcut settings for <i>CMS</i> <i>CMS</i> users Timetable settings Database items Hypothetical data for the Forecast product Feature access settings, timetables, schedules, and associated tasks from the User Permissions subsystem Historical and real-time custom reports Menu and interface settings for the <i>CMS</i> terminal interface Printer parameters for the <i>CMS</i> printer

Data type	Migrated data	
Agent/Call Center Admin data (single user required)	ACD profiles - VDN profiles Agent trace - agents being traced, trace data Agents - shifts, groups Dictionary - synonyms Exceptions - agent admin, link data, malicious call trace, split admin, splits, split profile, trunk group admin, VDN admin, vector admin User permissions - ACD access, split/skill access, trunk groups access, VDN access, vector access Forecast - current day report, current day configuration, call handling profiles, costs profiles, data storage allocation, special day admin, manager status, trunk group profiles	
Historical data	Exceptions - agent data, split access, trunk groups, trunk group access, VDN data, vector data Historical reports - agent activity, agent login/logout, daily agent data, daily call work codes data, daily splits data, daily trunk groups data, daily trunk groups data, daily trunks data, daily VDN data, daily vector data, intrahour agent data, intrahour agent login-logout data, intrahour call work code data, intrahour split data, intrahour trunk group data, intrahour trunk data, intrahour VDN data, intrahour vector data, monthly agent data, monthly call work code data, monthly split data, monthly trunk group data, monthly trunk data, monthly VDN data, monthly vector data, weekly agent data, weekly call work code data, weekly split data, weekly trunk group data, weekly trunk data, weekly VDN data, weekly vector data Forecast - daily split data, daily trunk group data, special day split data, interval split data, interval trunk group data	

6. In the **Stop date:** field, enter the date through which you wish to record data for migration to the new *CMS*. The migration process does not migrate data collected after the date specified.

Leaving this field blank will cause the program to migrate data up to the data written on the backup device by the *CMS* Maintenance Backup procedure.

7. In the **Stop time:** field, enter the time through which you wish to record data for migration to the new *CMS*. The migration process does not migrate data collected after the stop date and time specified.

If this field is left blank, the stop time defaults to 23:59.

- 8. In the **Specify ACD(s) to migrate:** group, select one of the following options:
 - All ACDs Data is migrated from the backup device to the hard disk on an ACD-by-ACD basis. Data for ACD1 on the backup device will be used for ACD1 on the new CMS.

• **Single ACD** - Historical data is migrated from the backup device to the hard disk for the ACDs specified in the **from:** and **to:** fields.

For example, to migrate data from ACD1 on the backup device to ACD4 on the new *CMS*, place 1 in the **from:** field and 4 in the **to:** field.

 From the menu bar, select Actions > Run. The Run menu item appears only if the settings for Data Collection and CMS State are appropriate for the type of migration selected.

CMS begins the migration process. The **Status:** field will report the progress of the migration.

Pseudo-ACDs

A pseudo-ACD is an area created on the CMS server to store previously backed-up ACD data. A pseudo-ACD is not a real ACD and does not communicate with any Communication Manager system.

Pseudo-ACDs are used to store data which can then be viewed in reports. This could be useful in the following scenarios:

- Storing data from an off-site contact center for the purposes of reporting in conjunction with an on-site *CMS*.
- Storing data for archival purposes. This data can no longer be deleted by the **Data Storage Allocation** feature and can be used to generate reports on older data for comparison with more recent ACD data.

This section contains the following topics:

- <u>Before you begin</u> on page 311
- <u>Permissions</u> on page 313
- <u>Creating a pseudo-ACD</u> on page 313
- Viewing pseudo-ACDs on page 314
- Deleting a pseudo-ACD on page 314
- Loading pseudo-ACD data on page 315

Before you begin

The following items should be read and understood before working with pseudo-ACDs:

• Each pseudo-ACD is given a number from 9 through 26. Numbers 1 through 8 are reserved for eight real ACDs connected to the *CMS* server.

- In order to load the pseudo-ACD data, the *CMS* server must have enough free space available. Use the **Free Space Allocation** window to see how much space is required for the existing ACDs and how much is available for the pseudo-ACD data.
- Use the **Data Storage Allocation** window to define how much historical data will be stored for the pseudo-ACD. Enter storage values equal to or greater than those used from the ACD which originally held the data.
- Use the **Storage Intervals** window to set storage intervals for the pseudo-ACD data to match the interval size and data collection times of the ACD from which the data was taken.
- The Data Collection feature can be running when modifications are made in the **Data Storage Allocation** or **Storage Intervals** windows for a pseudo-ACD, but *CMS* must be in single-user mode.
- If the pseudo-ACD has the separately purchased Forecast feature on it, **Forecast Data Storage Allocation** parameters may require changes in order to match those of the pseudo-ACD. This is not the same as the **Data Storage Allocation** window normally used in *CMS*.
- In order for users to access the pseudo-ACD, permissions must be given through the **ACD Access** window in the **User Permissions** subsystem.
- A pseudo-ACD can have a name assigned to it in the Dictionary even before the pseudo-ACD is created.
- Creation of a pseudo-ACD using *Supervisor* while users are logged in requires that the users log out and back in before they can see the new pseudo-ACD.
- Before deleting a pseudo-ACD, turn off permissions to it so that users will not be working in the pseudo-ACD when it is deleted.
- CMS does not automatically summarize pseudo-ACD data.

• The following menu items are available when a pseudo-ACD is selected and the appropriate user permissions are assigned:

Reports	CMS System Setup	Maintenance
Historical	CMS State	ACD Status
Dictionary	Data Collection	Archiving Status
all submenu items	Data Storage	Backup Data
Forecast	Allocations	Backup/Restore
all submenu items	Data Summarizing	Devices
Custom Reports	Free Space Allocation	Connection Status
all submenu items	Load Pseudo-ACD	Printer Administration
User Permissions	Pseudo-ACD Setup	Restore Data
all submenu items	R3 Migrate Data	
	Storage Intervals	
	Switch Setup	

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view the **Pseudo-ACD Setup** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.
- To add or delete pseudo-ACDs, the user ID used to log in to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Creating a pseudo-ACD

This section provides the procedure for creating a pseudo-ACD on a CMS server.

Steps

To create a pseudo-ACD on a CMS server:

- From the Controller window, select Tools > System Setup....
 Supervisor displays the CMS System Setup window.
- 2. In the Operations: list, highlight Pseudo-ACD Setup.

3. Select **OK**.

Supervisor displays the Pseudo ACD Setup window.

- 4. In the **ACD:** field, enter the number or the name of the pseudo-ACD. The number can range from 9 to 26. This field requires a number to be entered if a name for this pseudo-ACD has not been defined in the Dictionary.
- 5. From the menu bar, select **Actions > Add**.

CMS creates the pseudo-ACD.

Viewing pseudo-ACDs

This section provides the procedure for listing the pseudo-ACDs on a CMS server.

Steps

To list pseudo-ACDs on a CMS server:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Pseudo-ACD Setup**.
- 3. Select OK.

Supervisor displays the Pseudo ACD Setup window.

4. From the menu bar, select **Actions** > **List all**.

Supervisor displays a secondary window listing all ACDs. The status bar displays the total number of pseudo-ACDs on the *CMS* server. Only those ACDs for which this user ID has *read* permission are displayed.

Deleting a pseudo-ACD

This section provides the procedure for deleting a pseudo-ACD on a CMS server.

Steps

To delete a pseudo-ACD on a CMS server:

- From the Controller window, select Tools > System Setup....
 Supervisor displays the CMS System Setup window.
- 2. In the **Operations:** list, highlight **Pseudo-ACD Setup**.

3. Select **OK**.

Supervisor displays the Pseudo ACD Setup window.

- 4. In the **ACD:** field, enter the name or number of a pseudo-ACD to delete.
- 5. From the menu bar, select **Actions > Find one**.

The status bar displays whether a match was found for the specified pseudo-ACD.

6. From the menu bar, select **Actions > Delete**.

CMS deletes the pseudo-ACD, the associated data, and any associated disk space. When the operation completes, *Supervisor* displays a **Successful** message in the status bar.

Loading pseudo-ACD data

This section provides the procedure for loading historical data archived from an existing ACD into a pseudo-ACD. After the pseudo-ACD receives the data, historical reports can be run with this information.

Before you begin

The following items should be read and understood before loading data into a pseudo-ACD:

- A pseudo-ACD must have been created in order for data to be loaded into it.
- Loading data into a pseudo-ACD requires data archived from an existing ACD on a CMS server.
- Set the pseudo-ACD as the current ACD before attempting to load data into it.
- Since the pseudo-ACD accepts any data on a backup volume, the data from a full backup may be more than needed. Loading a pseudo-ACD with a full backup creates the possibility of disk space problems. To eliminate this problem, perform a **Specific Tables** backup when creating the ACD data to load on a pseudo-ACD.
- Loading a pseudo-ACD with data automatically overwrites any existing data currently used by the pseudo-ACD.
- The number of splits/skills, agents, and other contact center entities are set to 0 (zero) for the pseudo-ACD when it is created. Set these entities to match the ACD supplying the data. Change these settings through the **Call Center Administration** feature.
- When created, a new pseudo-ACD has historical data storage parameters set to 0 (zero). To load data into the pseudo-ACD, the historical data storage parameters must be set to those of the ACD from which the data was archived, if not greater. Change these settings through the **Data Storage Allocation** window.
- The **Storage Intervals** and **Data Collection** settings for the pseudo-ACD require configuration in order to match those of the ACD supplying the data. If these settings are incorrect, loading the data into the pseudo-ACD fails.

Permissions

To load data into a pseudo-ACD, the user ID used to log in to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Steps

To load a data backup into a pseudo-ACD:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the ACD: field, select the pseudo-ACD that will receive the data.
- 3. In the **Operations:** list, highlight **Load Pseudo-ACD Data**.
- 4. Select OK.

Supervisor displays the Load Pseudo-ACD Data window.

- 5. In the **From ACD:** field, enter the number of the ACD used to make the data backup.
- 6. In the **Device name:** field, enter the name of the device that has the backup volume loaded.

To list all the devices on the *CMS* server, select **Actions** > **List devices** from the menu bar.

- 7. In the **Start date:** field, enter the date representing the first day of historical data to load on the pseudo-ACD. *CMS* searches the data backup for this date which serves as the starting point for loading data.
- 8. In the **Start time:** field, enter the time of the **Start date:** for which *CMS* will start loading data. The default is 12:00AM.
- 9. In the **Stop date:** field, enter the last date of historical data that *CMS* will load on the pseudo-ACD.
- 10. In the **Stop time:** field, enter the time of the **Stop date:** for which *CMS* will stop loading data from the data backup. The default is 12:00AM.
- 11. From the menu bar, select **Actions** > **Run**.

CMS begins loading data from the backup into the pseudo-ACD. The **Status:** field at the top of the window displays events in the loading process. The **Errors:** field displays any problems encountered during the loading process.

Cancelling the load process before it is finished will cause the pseudo-ACD to have partial data.

Storage intervals

The **Storage Intervals** window allows changes to be made to *CMS* which affect how and when data for the contact center is stored.

It is recommended that these settings are configured during installation and not changed because subsequent changes will affect data storage and report data coverage.

This section contains the following topics:

- Before you begin on page 317
- Permissions on page 317
- <u>Viewing storage interval settings</u> on page 318
- <u>Changing the intrahour interval</u> on page 318
- <u>Changing switch time zone</u> on page 319
- Modifying data summarizing settings on page 321

Before you begin

The following items should be read and understood before working with the **Storage Intervals** window:

- *CMS* must be in single-user mode and the data collection must be off before modifications to these settings can be made.
- Do not open another Storage Intervals window if one is already being used to alter these settings. The loss of data tables can result if multiple Storage Intervals windows are used.
- Free space allocation, data storage allocation, and storage intervals closely tied. A change
 in storage intervals may require adjustment of data storage or storage times in the Data
 Storage Allocation window. The more frequently CMS archives data, the more storage
 space is required.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view settings in the **Storage Intervals** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.
- To modify settings in the **Storage Intervals** window, the user ID used to log in to this *Supervisor* session requires *write* permission for the **CMS System Setup** feature.

Viewing storage interval settings

This section provides the procedure for viewing the **Storage Interval** settings for contact center data.

Steps

To view settings in the Storage Intervals window:

1. From the Controller window, select **Tools** > **System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Storage Intervals**.
- 3. In the **ACD**: field, select the ACD for which settings will be viewed.
- 4. Select OK.

Supervisor displays the Storage Intervals window.

Changing the intrahour interval

This section provides the procedure for changing the rate at which *CMS* archives data within a one-hour time period.

Before you begin

The following items should be read and understood before changing the intrahour interval setting:

- Changing the intrahour interval can result in a lengthy process as *CMS* must make modifications to all previously collected data.
- Increasing the frequency of the intrahour interval results in the contact center data taking more storage space. This can require changes to the length of time for which *CMS* stores contact center data. To change the length of time which data is stored, use the **Data Storage Allocation** window.
- Perform a full backup of historical data before making changes to the intrahour interval or data collection times or dates. After the changes are made, perform another full backup of historical data.
- Real-time reports use the intrahour interval when displaying data. Cumulative data is reset to zero at the beginning of each intrahour interval.

Steps

To change the setting for the intrahour interval:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Storage Intervals**.
- 3. In the ACD: field, select the ACD for which the intrahour interval will be changed.
- 4. Select **OK**.

Supervisor displays the Storage Intervals window.

5. In the **Intrahour interval (Select one):** group, select the option for the rate at which *CMS* archives contact center data.

Do not open another **Storage Intervals** window and attempt to change other settings during the following step. Doing so can result in the loss of database tables.

6. From the menu bar, select Actions > Modify.

CMS records the setting change and alters all previously recorded data to match this setting. This update process is lengthy and must not be interrupted. The status bar will display a **Successful** message when the operation completes.

- 7. Restart data collection. See <u>Changing the data collection state</u> on page 293 for information on this procedure.
- 8. Return *CMS* to multi-user mode. See the <u>Changing the CMS state</u> on page 291 for information on this procedure.

Changing switch time zone

This section provides the procedure on changing the time zone settings for an ACD so that it matches the time zone of the *CMS* server. Use this feature if you want the CMS title bar to show the time where the CMS is located instead of the master ACD time. If you do not use this feature, the CMS title bar will automatically display the master ACD time.

This procedure is only necessary for those configurations where an ACD resides in a different time zone than that of the *CMS* server, but you want the title bar to display the *CMS* time.

Before you begin

The following items should be read and understood before changing the time zone for an ACD:

 CMS must be in single-user mode and the data collection must be off before modifications to these settings can be made.

- If an ACD is connected to a *CMS* server in the same time zone, the **Switch time zone** offset: field should be set to 0.
- This procedure does *not* effect the time stamps on the CMS reports, real time or historical.
- This procedure does *not* effect the timetable schedule for timetables set to run at local times for a specific ACD.

Steps

To change the time zone offset for an ACD:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Storage Intervals**.
- 3. In the ACD: field, select the ACD which will have its time zone offset changed.
- 4. Select OK.

Supervisor displays the Storage Intervals window.

5. In the **Switch time zone offset (-23 to +23):** field, enter the number of hours that will convert the time zone of the ACD so that it matches the time zone of the *CMS* server.

If the ACD time is ahead of the *CMS* time, you must enter a plus sign (+) followed by the number of hours the ACD is ahead. If the ACD time is behind the *CMS* time, you must enter a minus sign (-) followed by the number of hours the ACD is behind.

For example, if the master ACD is in New York City and the *CMS* server is in Los Angeles, you would enter **+3** because the ACD is 3 hours ahead of the *CMS* time. The time zone offset does not affect the time stamps that are used with historical data.

6. From the menu bar, select Actions > Modify.

CMS adjust the time setting of the ACD by the value specified. The status bar will display a **Successful** message when the operation is complete.

Note:

The CMS time reverts to the Unix clock if the link to the ACD that is designated as the master clock stops functioning. Even if the link begins to function normally, the only way CMS will reset back to the master clock is to either:

- Turn CMS off and then on
- Reboot the server
- 7. Restart data collection. See <u>Changing the data collection state</u> on page 293 for information on this procedure.
- 8. Return *CMS* to multi-user mode. See <u>Changing the CMS state</u> on page 291 for information on this procedure.

Modifying data summarizing settings

This section provides the procedure for modifying the times and days for which contact center data is recorded and summarized.

Before you begin

The following items should be read and understood before modifying data summarizing settings:

- *CMS* must be in single-user mode and the data collection must be off before modifications to these settings can be made.
- Perform a full backup of historical data before making changes to the data collection times or dates. After the changes are made, perform another full backup of historical data.
- When a weekly report is requested, the date entered must correspond to the day of the week specified in the **Week start day** field.

Do not open another **Storage Intervals** window and attempt to change other settings while modifying these settings. Doing so can result in the loss of database tables.

Steps

To modify the CMS date and time settings for data summarizing:

1. From the Controller window, select **Tools > System Setup...**.

Supervisor displays the CMS System Setup window.

- 2. In the **Operations:** list, highlight **Storage Intervals**.
- 3. In the **ACD**: field, select the ACD which will have its data summarizing settings changed.
- 4. Select OK.

Supervisor displays the Storage Intervals window.

- 5. In the **Data summarizing time:** field, enter the time when *CMS* should summarize data for the previous day, week, and month. The time must be entered in one of the following formats:
 - HH:MM PM For example, 12:35 AM

• 24-hour format - For example, 00:35

If you do not wish to change this field, skip this step and proceed to the next.

The time entered in this field must be equal to or greater to intrahour interval in order to allow *CMS* to finish archiving data. The default time for this field is 12:35 AM.

Weekly summaries are started on the day following the day specified in the **Week stop day** field. Monthly summaries are started on the first day of the next month. For example, the monthly summary for January is done on the first day of February.

To run data summarizing on the day for which data was collected, the **Data summarizing time:** field must be set for 15 minutes after the **Daily stop time** and prior to midnight. For example, the **Data summarizing time:** field can be set to 11:59 PM or 23:59. This would require that the **Daily stop time:** field be set to 11:44 PM or 23:44.

6. In the **Week start day (Select one):** group, select the day that represents the start of the work week for the contact center.

If you do not wish to change this field, skip this step and proceed to the next.

The default value for this field is **Sunday**.

7. In the **Week stop day (Select one):** group, select the day that represents the end of the work week for the contact center.

If you do not wish to change this field, skip this step and proceed to the next.

The default value for this field is **Saturday**. Data through the end of the stop day is collected and included in the weekly summary.

When the start or stop day is changed for the week, the data from the old start day through the new stop day for the week is archived.

If possible, make any changes to the **Week start day** and **Week stop day** after *CMS* performs the weekly archive. This change is not possible for a seven-day week. When the start and stop day for the week are changed, the current week will contain the data item, **INCOMPLETE**, to indicate that the data for this week is peculiar since the definition of that week was changed.

If the **Week start day** and **Week stop day** are identical, data for only one day will be collected for that week.

- 8. In the **Daily start time:** field, enter the time at which data collection should start. Enter the time in one of the following formats:
 - HH:MM PM For example, 12:00 AM
 - 24-hour format For example, 00:00

If you do not wish to change this field, skip this step and proceed to the next.

The default value for this field is 12:00 AM (midnight).

9. In the **Daily stop time:** field, enter the time at which data collection should stop. Enter the time in one of the formats specified in the previous step.

If you do not wish to change this field, skip this step and proceed to the next.

The default value for this field is 11:59 PM. Data is collected through the end of the minute specified.

Do not enter the same time in this field as in the **Daily start time:** field. Doing so will result in data being collected for only one minute per day.

10. From the menu bar, select **Actions > Modify**.

CMS updates the data summarizing parameters as specified. A **Successful** message appears in the status bar when *CMS* completes the operation.

- 11. Restart data collection. See <u>Changing the data collection state</u> on page 293 for information on this procedure.
- 12. Return *CMS* to multi-user mode. See <u>Changing the CMS state</u> on page 291 for information on this procedure.

Switch setup

Use the **Switch Setup** window to view the following information:

- Communication Manager setup information ACD name, release, and activated features, such as Call Vectoring, Call Prompting, and Expert Agent Selection (EAS)
- CMS software information release, version, and load
- Phantom abandon call timer values

This section contains the following topics:

- Before you begin on page 323
- Permissions on page 324
- Viewing switch setup data on page 324
- Listing all switch setup data on page 325

Before you begin

The following items should be read and understood before working with the **Switch Setup** window:

• The Switch Setup window can only display real ACDs. Pseudo-ACDs are not supported.

- This window can only be used to view information. No modifications to the ACD can be made through *Supervisor*.
- The phantom abandon call timer is used to determine which calls to count as abandoned calls rather than ACD call. If the call lasts less than the number of seconds specified, the Communication Manager system considers it an abandoned call. The feature is useful in areas where the central office does not provide disconnect supervision on trunks.
- To display an ACD name in the **Switch Setup** window, it must first have the name assigned in the Dictionary. See <u>Adding an ACD name</u> on page 52 for more information on this procedure.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

• To view ACDs in the **Switch Setup** window, the user ID used to log in to this *Supervisor* session requires *read* permission for the **CMS System Setup** feature.

Viewing switch setup data

This section provides the procedure for viewing setup information for an ACD.

Steps

To view the setup settings for an ACD:

- From the Controller window, select Tools > System Setup....
 Supervisor displays the CMS System Setup window.
- 2. In the **Operations:** list, highlight **Switch Setup**.
- 3. Select OK.

Supervisor displays the Switch Setup window.

4. In the **ACD:** field, enter the name or number of the ACD to display.

To have all ACDs returned from the query so that you can cycle through them in this dialog, leave this field blank and proceed to the next step.

5. From the menu bar, select **Actions > Find one**.

Supervisor displays the setup information for the specified ACD. If more than one match was found, use the **Next** and **Previous** items under **Actions** menu to cycle through them.

Listing all switch setup data

This section provides the procedure for viewing setup information for all ACDs.

Steps

To view the setup settings for all ACDs:

- From the Controller window, select Tools > System Setup....
 Supervisor displays the CMS System Setup window.
- 2. In the **Operations:** list, highlight **Switch Setup**.
- 3. Select OK.

Supervisor displays the Switch Setup window.

4. From the menu bar, select **Actions** > **List all**.

Supervisor displays a secondary window listing all ACDs and their associated settings.

Chapter 10: Configuring CMS system settings

Chapter 11: Maintaining CMS

Maintaining a *CMS* server consists of routine tasks such as backing up data, checking the status of the *CMS* connection to the switch, and viewing the maintenance error log.

The **Maintenance** menu allows you to perform the following tasks:

- Initiate CMS backups and restores
- Assign a name and description to the full path name for a device used for data backups
- Assign printer names and options
- Monitor the data link between the CMS server and the switch
- View the measurement status of a particular ACD
- View the Maintenance Error Log
- View the archiving status

This section contains the following topics:

- Before you begin on page 327
- <u>ACD status</u> on page 328
- Archiving status on page 331
- Backup/restore devices on page 334
- Data Backup on page 338
- Restoring data on page 358
- Recommendation to restart your CMS server on page 362
- <u>Connection status</u> on page 363
- Administering a printer on page 366
- Maintenance reports on page 370
- <u>Advanced Debugging window</u> on page 400

Before you begin

If an ACD Group is selected as the current ACD in the **Maintenance** window, only those operations that are valid for the ACD Group will appear in the **Operations:** list.

ACD status

The **ACD Status** window displays information about the current selected ACD, including the number of splits or skills, agents logged in, trunk groups, trunks, VDNs, vectors (if your company has purchased Call Vectoring), and measured splits. You can also use the ACD status window to request a complete set of translations from a specific ACD. The ACD status window will look different if your switch has Expert Agent Selection (EAS).

This section contains the following topics:

- Before you begin on page 328
- Permissions on page 328
- Viewing ACD status on page 329
- Listing ACD status on page 329
- Description of the ACD Status window with EAS on page 330
- Description of the ACD Status window without EAS on page 330
- <u>Requesting ACD translations</u> on page 331

Before you begin

You should read and understand the following items before viewing the status of an ACD through the Maintenance subsystem:

- The link must be up between the Communication Manager system and the *CMS*, if you want to view the status or request translations from a specific ACD.
- Data collection must be on for the specific ACD for the translations you request.
- The data will be lost during a translations pump-up. An acknowledgement window will ask if you want to proceed.

Permissions

Depending on the procedure you wish to perform, you will need the following permissions:

- To view the ACD Status window, you need to have *read* permission for the Maintenance subsystem.
- To request translations, you need to have *write* permission for the **Maintenance** subsystem.

Viewing ACD status

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Highlight ACD Status in the Operations: list.
- 4. Select OK.

Supervisor displays the ACD Status window.

For additional information on the fields in the **ACD Status** window, see <u>Description of the</u> <u>ACD Status window - with EAS</u> on page 330 and <u>Description of the ACD Status window -</u> <u>without EAS</u> on page 330.

- 5. Perform one of the following steps to enter information in the ACD(s): field:
 - Enter the name or number of the ACD directly into the field.
 - Use the history list to select an ACD.
 - Use the Browse button to select an ACD.

Note:

You can also select an ACD Group which will return all the members of that group.

6. From the **Actions** menu, select **Find one**.

Supervisor displays the ACD Status window for the selected ACD.

If you selected an ACD Group, the first member of the group is displayed. View any other member ACDs by using the **Next** and **Previous** buttons.

Listing ACD status

To list the status of all ACDs:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Highlight ACD Status in the Operations: list.
- 4. Select OK.

Supervisor displays the ACD Status window.

5. From the Edit menu, select Clear all.

6. From the **Actions** menu select **List all**.

Supervisor displays the ACD Status - List All window.

Description of the ACD Status window - with EAS

Field descriptions

The following table provides the descriptions of the fields on the **ACD Status** window where Expert Agent Selection (EAS) is installed:

Field	Description	
Skills	The skills measured by CMS.	
Skill members in use	The agent/skill pairs logged in at the time the ACD Status window was opened.	
Trunk groups	The trunk groups measured by CMS.	
Trunks	The trunks measured by CMS. Unmeasured trunks are not included.	
VDNs	The VDNs measured on the selected ACD.	
Vectors	The vectors available for use in the selected ACD.	
Errors	The errors encountered by the ACD.	

Description of the ACD Status window - without EAS

Field descriptions

The following table provides the descriptions of the fields on the **ACD Status** window where Expert Agent Selection (EAS) is not installed:

Field	Description	
CMS is measuring	The current value of each of the following items.	
Splits	The splits measured by CMS.	
Total split members	The agent/split pairs logged in at the time the ACD Status window was opened.	
Trunk groups	The trunk groups measured by CMS.	

Field	Description	
Trunks	The trunks measured by CMS. Unmeasured trunks are not included.	
VDNs	The VDNs measured on the ACD.	
Vectors	The vectors available for use in the selected ACD.	
Measured splits	The number of measured splits in a selected ACD.	
Errors	Errors encountered by the ACD.	

Requesting ACD translations

The ACD translation request was used to manually synchronize the measure contact center entities from an ACD to the *CMS* server.

A Important:

This functionality was available for Generic 2 and System 85 switches and is no longer needed when your *CMS* server is connected to a Communication Manager system. The system downloads the ACD translations automatically when changes are made to measured contact center entities.

M Important:

If you request an ACD translation, contact center data is interrupted on the Communication Manager system and can result in inaccurate reports.

Archiving status

Use the **Archiving Status** window to display the status, date, and time of the last archive for interval, daily, weekly, and monthly data. This information can help you decide when to turn off data collection or change your archiving times to minimize data loss.

This information can help you decide when to turn off data collection or change your archiving times without losing data.

This section contains the following topics:

- Before you begin on page 332
- Permissions on page 332
- <u>Viewing the archiving status of a single ACD</u> on page 332

- <u>Viewing the archiving status of all ACDs</u> on page 333
- Description of the Archiving Status List All window on page 334

Before you begin

Read and understand the following items before working with the **Archiving Status** window:

- **Archive** indicates that *CMS* is storing interval, daily, weekly, and monthly data in the appropriate database tables.
- The three archive status indications are:
 - **Finished** The last archive has been completed
 - Running The archive is currently running
 - **Not run** The archive has never run

Permissions

You need *read* permission for the **Maintenance** subsystem to view the **Archiving Status** window.

Viewing the archiving status of a single ACD

Steps

To view the archiving status of a single ACD:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Archiving Status in the Operations: list.
- 4. Select OK.

Supervisor displays the Archiving Status window.

- 5. Perform one of the following steps to enter information in the ACD(s): field:
 - Enter the name or number of the ACD directly into the field.
 - Use the history list to select an ACD.
 - Use the Browse button to select an ACD.

- 6. In the **Archiving type (Select any you wish):** check boxes, clear the archives you do not want to view. If you want to view all archive types, leave the check boxes as check marked and proceed to the next step.
- 7. From the Actions menu, select List all.

Supervisor displays the Archiving Status - List All window.

For more detailed information about the **Archiving Status - List All** window, see <u>Description of the Archiving Status - List All window</u> on page 334.

Note:

It is also possible to view the archiving status of all members of a single ACD Group using this procedure. Instead of the name or number of a single ACD, enter the name or number of the ACD Group in the **ACD:** field.

Viewing the archiving status of all ACDs

Steps

To view the archiving status of all ACDs:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Archiving Status in the Operations: list.
- 4. Select OK.

Supervisor displays the Archiving Status window.

- 5. If the ACD(s): field is not clear; go to the Edit menu, and select Clear all.
- 6. Select the type of archives you want to view in the **Archiving type:** check boxes.
- 7. From the Actions menu, select List all.

Supervisor displays the Archiving Status - List All window.

For more detailed information about the **Archiving Status - List All** window, see <u>Description of the Archiving Status - List All window</u> on page 334.

Description of the Archiving Status - List All window

Field descriptions

The following table lists the fields and the associated descriptions for the **Archiving Status - List All** window:

Field	Description	
Status	The archiving status of the ACD.	
Date	The date the last archive completed for the ACD.	
Time	The time the last archive completed for the ACD.	
Next scheduled	The date and time of the next-scheduled archive. Dates and times will not appear for the Interval archiving. Interval archives occur at the end of each interval: 15, 30, or 60 minutes.	

Backup/restore devices

Use the **Backup/Restore Devices** window to assign a name and description to a full path name for a device. The device name is used for data backup, data migration, data restore, and for loading a pseudo-ACD. The maintenance device menu now displays "Tape" and "Other" options for Device Type to the user to choose either "tape" as a backup/restore device or "other" which includes USB storage device and network mounted file system.

The LAN Backup feature of CMS is not available through the Supervisor interface. For more information regarding this feature, see the Avaya Call Management System LAN Backup User Guide.

This section contains the following topics:

- Permissions on page 335
- <u>Viewing a backup/restore device</u> on page 335
- Listing all backup/restore devices on page 335
- Adding a backup/restore device on page 336
- <u>Modifying a backup/restore device</u> on page 336
- Deleting a backup/restore device on page 337

Permissions

Depending on the procedure you wish to perform, you need the following permissions:

- You need *read* permission for the **Maintenance** subsystem to view the **Backup/Restore Devices** window.
- You need *write* permission for the **Maintenance** subsystem to add, delete or modify any backup/restore devices.

Viewing a backup/restore device

To view a backup/restore device:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Backup/Restore Devices in the Operations: list.
- 4. Select OK.

Supervisor displays the Backup/Restore Devices window.

5. From the **Actions** menu, select **Find one**.

Supervisor displays the information for the first device.

6. If more than one match is found, go to the **Actions** menu, and select **Next**. Repeat this step until all devices have been displayed.

Listing all backup/restore devices

To list all backup/restore devices defined on the CMS server:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Backup/Restore Devices in the Operations: list.
- 4. Select OK.

Supervisor displays the Backup/Restore Devices window.

5. From the **Actions** menu, select **List all**. *Supervisor* displays a list of all devices.

Adding a backup/restore device

To add a backup/restore device to the CMS server:

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Operations** tab.
- 3. Select Backup/Restore Devices in the Operations: list.
- 4. Select OK.

Supervisor displays the Backup/Restore Devices window.

5. In the **Device name:** field, enter the name of the backup/restore device.

If you want to refer to your backup/restore device as ddrive1, enter ddrive1 in the **Device** name: field.

6. In the **Path:** field, enter the full Solaris system path to access the device.

See the *Accessing devices* section in your *Solaris System Administrator's Guide* for more information about devices and paths. If the device type is "Other", it's system path cannot be located on the CMS disk. In addition, the USB storage device or network must be mounted.

- 7. In the **Description:** field, enter any additional information to help identify the device.
- 8. The **Device type** field now has the option of "Tape" and "Other". "Tape" includes all currently supported tape drives. "Other" includes the USB and network type backup devices.
- 9. From the Actions menu, select Add.

The device is defined through CMS and can be used for backup and restore operations.

Modifying a backup/restore device

To modify the definition of a backup/restore device on the CMS server:

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Operations** tab.
- 3. Select Backup/Restore Devices in the Operations: list.
- 4. Select OK.

Supervisor displays the Backup/Restore Devices window.

5. Perform one of the following procedures to select the correct backup/restore device:

- If you know the name of the device, enter the name of the device in the **Device name:** field and then press the **Enter** key.
- If you do not know the name of the device, perform the following steps:
 - 1. From the **Actions** menu, select **Find one**.
 - 2. If more than one match is found, select **Actions** > **Next**. Repeat this step until the device you want to modify is displayed in the dialog box.
- 6. Enter the new information in the fields that require modification.
- 7. From the **Actions** menu, select **Modify**.

The changes made to the device definition are saved.

Deleting a backup/restore device

To delete the definition for a backup/restore device on the CMS server:

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Operations** tab.
- 3. Select Backup/Restore Devices in the Operations: list.
- 4. Select OK.

Supervisor displays the Backup/Restore Devices window.

- 5. Perform one of the following procedures to select the correct backup/restore device:
 - If you know the name of the device, enter the name of the device in the **Device name**: field and then press the **Enter** key.
 - If you do not know the name of the device, perform the following steps:
 - 1. From the Actions menu, select Find one.
 - 2. If more than one match is found, go to the **Actions** menu, and select **Next**. Repeat this step until the device you want to delete is displayed in the dialog box.
- 6. From the **Actions** menu, select **Delete**.

The specified backup/restore device definition is deleted from the CMS server.

Data Backup

There are two types of data backup available through *CMS*, CMSADM and Maintenance. Avaya CMS can backup and restore while the data collection remains on. This ability helps minimize data loss. However, once a CMSADM backup is started, new logins through the ASCII interface, through Avaya CMS Supervisor, and through Avaya Visual Vectors are blocked. A maintenance restore of CMS System Administration data or ACD Administration data requires Avaya CMS to be in single-user mode.

The LAN Backup feature of CMS is not available through the Supervisor interface. For more information regarding this feature, see the Avaya Call Management System LAN Backup User Guide.

This section contains the following topics:

- CMSADM backup on page 338
- Maintenance backup on page 339
- <u>Tape drives and cartridges</u> on page 339
- <u>USB/network backup/restore devices</u> on page 339
- Things to consider when backing up or restoring data on page 340
- Adding a Full Maintenance Backup Timetable for an ACD on page 344
- Performing a CMSADM backup on page 347
- Performing a maintenance backup on page 350
- Description of the Backup Data window on page 351
- Common backup error messages on page 353
- <u>Labeling the backup volume</u> on page 354
- <u>Recovery kit</u> on page 355
- Binary backup of database to tape on page 356
- Binary backup of database to a network device on page 358

CMSADM backup

The CMSADM backup saves all of the system data on the computer onto a tape or other device such as USB or network.

The CMSADM backup includes the following data:

- Solaris system files and programs
- CMS programs

• Non-CMS customer data placed on the computer

The CMSADM backup will *not* save *CMS* database tables. For complete data recovery, both CMSADM and maintenance backups are required.

This type of backup is only performed through the *CMS* ASCII interface. A *Supervisor* interface for this type of backup is not available.

Maintenance backup

Maintenance backups are used to archive and restore *CMS* data. If you do not have a backup, data is lost and cannot be recovered in the event of system or disk failure. The frequency of your backups is determined by how much data your contact center is willing to lose.

Through *Supervisor*, you can use the Backup Data operation on the **Maintenance** window to perform full and incremental backups of *CMS* historical and administration data.

Tape drives and cartridges

The following table lists the models of tape drives that are supported:

Tape drive	Tape description
DAT 72	DDS compliant 170 meter 36/ 72-GB DAT cartridge 4 mm
LTO-4	820 meter 800 GB LTO cartridge 12.65 mm

USB/network backup/restore devices

The screen containing **Maintenance: Backup/Restore devices** now displays "Tape" and "Other" options to the user under the **Device Type** field. The "Other" option may be either a USB storage device or network device, and does not include any location on the CMS disk itself. If the device chosen for a CMS Maintenance Backup is of type "Other", the backup file is named using the tape label convention. This file is a compressed file. The CMSADM backup can also be performed on the USB or network devices. The backup file generated by CMSADM backup is labeled with a unique label that includes date, time, and machine name, and is not compressed.

Things to consider when backing up or restoring data

Avaya recommends that you back up your CMS system data on a monthly basis and you back up your CMS ACD data on a daily basis. If you are using tape, the backup tapes should be stored in a safe location, easily retrievable, correctly labeled, and replaced when worn out. Running system backups is no longer service affecting, but the backups will impact the performance of the CMS system. It is recommended that you run backups when CMS system activity is low.

Note:

The **Maintenance > Restore** Data option is only used when the CMS version on the backup media is the same as the CMS version installed on the system. If the CMS versions are different then the data needs to be migrated using the **System Setup > R3 Migrate Data** option.

Example: If the CMS version on the backup media is r16.2da.d and the CMS version installed on the system is r16.2da.d then the data can be restored. If the CMS version on the backup media is r16.2da.d and the CMS version installed on the system is r16.2da.g then the data must be migrated.

This section presents several factors that will impact the amount of time it takes to backup or restore your data and presents options to reduce backup and restore times.

This section includes the following topics:

- Factors that impact backup and restore times on page 340
- Reducing tape backup and restore times on page 341
- Alternate methods for backing up and restoring data on page 342
- Determining the duration of a standard CMS R16 full Maintenance Backup to tape on page 342
- Restoring or Migrating from a non-tape device on page 343

Factors that impact backup and restore times

The amount of time it takes to back up or restore data depends on the:

- Amount of data An increase in the amount of data will cause an increase in the amount of time it takes to back up or restore the data. Some factors that will increase the amount of data being stored are:
 - Number of items being measured More data is generated if you measure 100,000 agent skill pairs instead of 10,000.

- Number of days information is stored The greater the data storage time, the greater the amount of data that will have to be backed up or restored. When the CMS system reaches a predetermined threshold for data storage, the oldest record is deleted so that the newest record can be stored. Twice the amount of data is stored if you set your data storage for 62 days instead of 31 days.
- Interval size Shorter intervals generate more data. A 15 minute interval will generate significantly more data than a 60 minute interval.
- System load Processes that require a large amount of system resources slow down the CMS system. Backing up data requires a large amount of system resources. Additional processes that require a large amount of system resources are:
 - Running reports Running a single large report or multiple smaller reports will use a large amount of system resources.
 - Archiving data Archiving a large amount of data will use a large amount of system resources.
- Necessity for manually changing backup tapes If the amount of data exceeds the capacity of a single backup tape, someone must monitor the system and manually load additional tapes. A data backup or restore does not finish unless someone is able to load tapes into the tape device as needed.
- The device you are backing up to. If you are backing up to a USB storage device or a network mounted directory, the backup times will be longer than the LTO tape device. You may want to consider a backup strategy of the following type:
 - Performing full backups only once a week
 - Performing incremental backups on three or four other days of the week

For example, you might want to perform your full backup on Saturday nights, and your incremental backups on Mondays, Wednesdays, and Fridays.

Reducing tape backup and restore times

If you do not take steps to optimize your CMS backup and restore times, you will begin to experience performance issues. Your CMS system performance will drop if the backup continues to run when contact center activity increases. With the increased CMS capacities that are now available, CMS backups and restores could take much longer to complete than they have in the past.

Due to the higher capacity limits and fewer database restrictions, the maintenance backup time can take longer with CMS R16 than previous releases. In some cases the extended amount of time may be unacceptable to customers. In rare extreme cases, maintenance backups could take more than 24 hours.

To reduce the amount of time it takes to backup or restore data, you can:

• Select the maximum interval time that will meet your data collection needs.

- Select the minimum data storage times that will meet your data collection needs for all the historical database tables.
- Run reports when the CMS system is not actively backing up or restoring data.
- Schedule each ACD to back up at a different time.
- Schedule routine backups to occur at a time that is different from data archiving.
- Schedule routine backups to occur when CMS system activity is low.
- Use the new binary backup that is provided with CMS R16.
- Reduce the amount of data being stored so only one backup tape is needed to store the data.
- Upgrade your CMS system to a more powerful hardware platform or add additional memory and CPUs.

Alternate methods for backing up and restoring data

LAN Backup

If you need a higher capacity process for backing up and restoring your data, you may want to use the Avaya CMS LAN Backup feature. The Avaya CMS LAN Backup feature provides an alternative to the traditional method of backing up and restoring data which requires you to manage your tape library, your USB storage device(s), or your network file space. LAN Backup allows you to back up CMS data and system information over a local area network (LAN) to a storage manager, which manages the number of backups and their location. CMS supports the use of Tivoli Storage Manager and Symantec Netbackup storage managers.

The Avaya Call Management System LAN Backup User Guide provides information about using the CMS LAN backup feature, hardware requirements, software requirements, and support guidelines.

Binary Backup

To speed up the time it takes to run a backup, you can use the new binary backup that is provided with CMS R16. The CMS R16 binary backup procedure can write data to a tape drive, a USB storage device or over the network. Similar to the LAN backup and restore processes, the binary backup does not support table level restore and data migration. A binary backup is a good alternative for disaster recovery. In general, a binary backup to a tape device or a USB storage device, of a fully loaded CMS system takes approximately 30 minutes. A binary backup over a network will vary depending upon the network bandwidth.

Determining the duration of a standard CMS R16 full Maintenance Backup to tape

To determine the duration to do a full maintenance backup to tape, you must determine the amount of used disc space on the system. To determine the used disk space:

- 1. Log in to the CMS server as root user.
- 2. Run cms > System Setup > Free Space Allocation.
- 3. Refer to the **Space Used to Date** column for each ACD that appears on the screen.
- 4. Sum the total space used for all ACDs (shown in kilobytes).
- 5. Divide the total space used by 1000 (approximate speed of backup to tape), then by 3600 (seconds in an hour).

For example, if the total space used is 10,000,000 kilobytes (10 million), then run the calculation 1000000/1000/3600. This equals 2.77, which is the number of hours that a full maintenance backup to tape will take for all ACDs on the system. Note that you can use this calculation on each individual ACD to determine the time to back up a single ACD.

Restoring or Migrating from a non-tape device

When your backup device is of type "Other", it means that you have specified either a USB storage device or a network mount point as your chosen location for maintenance backups. It is your responsibility to manage this storage area. You must keep enough free space in your chosen "Other" device to allow for scheduled maintenance backups. This means that you must periodically check the network mount point or the USB storage device for available space, and remove older backup files to allow for more storage. If you do not wish to manage the non-tape storage area, you should consider the LAN Backup feature described above. If you are using a network directory, ensure that you include this directory in the system backups of your company's UNIX or non-CMS servers.

You should keep in mind the following recommendations for maintenance of your "Other" storage area:

- Do not store CMSADM backup files and Maintenance backup files on the same USB storage device or in the same network mount point. Keep a separate set of USB storage devices for your CMSADM backups (at least two), or create separate network directories for your CMSADM backups with adequate storage for at least two backups.
- Do not store more than one full Maintenance backup and 6 incremental backups on one USB storage device.
- Keep at least two full Maintenance backups and the accompanying week's worth of incremental backups on two separate USB storage devices. If you are using a network directory, allow enough storage for at least two full Maintenance backups and the accompanying week's worth of incremental backups. If you are backing up multiple servers, increase the storage accordingly.

When performing a Maintenance restore, if you check the **"Restore from the latest backup?"** box, the logic used to determine the latest backup is as follows:

- The backup file labeled with the latest full backup for the given server
- The backup file labeled with the next latest full backup if the latest cannot be found

 If no full backups can be located for the given server, the latest incremental backup is looked for

Note:

All the above steps are relative to the "Other" device location (USB storage device or network mount point).

You may wish to control which backup file is used for a restore or a migration. This is similar to mounting your chosen tape and performing the restore or migrate from that tape. If you wish to control which backup file is used for a restore, follow the steps below:

 On your "Other" storage device, create a UNIX file named "restore_list" which will contain the names of the files you wish to restore from. These files must be ordered in the restore list beginning with the first backup you wish to restore from, to the last backup. For example, if your CMS maintenance backups on server finch begin on October 4, 2010 with a full backup and are followed by an incremental backup on October 6, October 8, and October 10, you would see the following files in your backup storage area or on your USB storage device:

```
# ls -rt *finch*
CMS-101004-02-LSAC-00-F-01-05-finch000000000
CMS-101006-02-LSAC-00-I-01-05-finch0000000000
CMS-101008-02-LSAC-00-I-01-05-finch0000000000
```

• To create a list of these file names in a file named "**restore_list**", run the following command:

ls -rt *finch* > restore_list

• Once the restore list is created, you may begin your Maintenance restore. Do not check the "**Restore from latest backup**" box so that **restore_list** is used. As each of the backups is restored, it is removed from the list. When you have restored all backups, you may choose "**Stop**" to end the restore.

Adding a Full Maintenance Backup Timetable for an ACD

The following items should be read and understood before performing maintenance backups:

- Maintenance backups to tape require that backup tapes be manually rotated. The frequency of the rotation depends on the dates and times of all scheduled backups. By creating individual ACD backups, the risk of data being overwritten is increased. Timetable backups must be scheduled such that the tape can be manually rotated before another scheduled backup runs. Failing to rotate the tape will cause the data to be overwritten by the next scheduled backup.
- If you are backing up to tape, a sufficient supply of tapes should be available so that tapes can be rotated. One common plan is to keep seven tapes in stock and recycle them daily. A new tape is used each day of the week, and each week the sequence is repeated.

- The maintenance backups do not back up the CMS software, Solaris system files, or non-CMS customer data on the system. For complete data recovery, both CMSADM and all maintenance backups are required.
- Running backups during archiving may cause performance problems. For best performance, run backups either before or after the archiving process.

Note:

When doing this procedure, use the arrow keys or type the first few unique letters of an item to highlight the item.

Perform the following steps to create a full maintenance backup timetable for a specific ACD:

- 1. Log in to CMS.
- 2. From the CMS Main Menu, press F4 to access the CMS timetables.
- 3. Select Timetables.
- 4. Press Ctrl-z to clear out the entries in the form.
- 5. Enter *fullBackup* in the **Timetable** name field.
- 6. Press Enter.
- 7. Select Find One.
- 8. Press Enter.
- 9. Rename the **fullBackup timetable** to a unique name that will identify the ACD being backed up, such as **acd1fullBackup** for ACD 1.
- 10. Press Enter.
- 11. Enter the letter **a** to highlight the **Add** item.
- 12. Press Enter.

Key strokes for building the new timetable will now be tracked. A message appears at the bottom of the Main Menu with the words "*Keeping Entries*".

- 13. Press F3 to access the Options menu.
- 14. Enter the letter **o** to highlight the **Options** item.
- 15. Press Enter.
- 16. Enter the letters **cu** to highlight the **Current ACD** item.
- 17. Press Enter.
- 18. Enter the number of the ACD for which the timetable is being created.
- 19. Press Enter.
- 20. Enter the letter **m** to highlight the **Modify** item.
- 21. Press Enter.
- 22. Press F5 to get out of the Options menu.

- 23. Enter the letter **m** to highlight the **Maintenance** item from the **Main Menu**.
- 24. Press Enter.
- 25. Do one of the following:
 - If the *Back Up Data item* is already be highlighted, press Enter.
 - If the *Back Up Data item* is not highlighted, enter the letters **back** to select Back Up Data, and press **Enter**.
- 26. Use the down arrow key to move to the **ACD(s) to back up** field.
- 27. Place an **x** in the **Current ACD** field.
- 28. Press Enter.
- 29. Enter the letter **r** to select the **Run** option.
- 30. Press Enter.
- 31. Press F5 to exit the Timetable menu.
- 32. Press F4 to open the Timetable/Shortcut options.
- 33. **Stop** should be highlighted, press **Enter**. If Stop is not highlighted, enter the letters **st** to highlight **Stop**.
- 34. Press Enter.
- 35. Enter **y** when prompted to save the changes.
- 36. Press Enter.

The timetable has been created. The system returns to the Timetable screen for the timetable just created.

- 37. As needed, modify the dates and times you want the timetable to run. If changes are made:
 - a. Press Enter.
 - b. Enter the letter **m** to select the **Modify** item.
 - c. Press Enter.
- 38. Press Enter.
- 39. Press F5 to exit the Timetable menu.
- 40. From the CMS Main Menu, press F4 to access the CMS timetables.
- 41. Select Timetables.
- 42. Press **Ctrl-z** to clear out the entries in the form.
- 43. Press Enter.
- 44. Enter the letter I to select the List All item.
- 45. A list of all **Timetables** is displayed.

- 46. Use the arrow keys to locate the Timetable just created. If the timetable is not found repeat this procedure.
- 47. Press **F5** to exit the Timetable: List All menu.
- 48. Press F5 to exit the Timetable menu.

Performing a CMSADM backup

The CMSADM backup should be done at the following times:

- Once a month (This is always the customer's responsibility.)
- After the CMS is provisioned (If using tape, never use the original tapes made during provisioning.)
- Before and after the CMS software is upgraded
- After the system has been set up in the factory (performed by factory personnel).

This backup contains the default factory configuration. These tapes should be saved if the system must be reinstalled in the field.

Note:

The factory will no longer provide a CMSADM backup as of R16.2.

A Important:

If you are backing up to tape, use a new set of backup tapes for the monthly CMSADM backup. Do NOT use the original sets of factory backup tapes or provisioning backup tapes. Make sure that there are enough tapes for the new backup.

Before you begin

The following items should be read and understood before beginning to work with removable media on your Sun Microsystems, Inc. Solaris system.

- Prior to running a cmsadm backup, you are recommended to restart the CMS server.
- If you choose tape as your backup device, verify that you are using the correct tape for the tape drive on your system.
- If you choose USB storage device as your backup device, verify that you are using a recommended USB device.
- Backup tapes and USB storage devices can wear out. Be sure to refresh your supply of backup devices at appropriate intervals.

Permissions

In order to perform a CMSADM backup you need *write* permission for the **Unix (r)** subsystem. Only employees with administrative responsibilities should be given the permissions and passwords.

Steps

1. Log into the Solaris system as *root* and open a terminal window.

See Logging in to CMS from the server console on page 402 for additional information.

2. Verify that the computer is in a Solaris multi-user state (2 or 3). To check if you are in the multi-user state, enter:

who -r

3. Enter the following command and press the Enter key:

cmsadm

The Avaya Call Management System Administration Menu is displayed:

4. Enter the number associated with the **backup** option.

The system displays the following message:

```
Choose a backup device:

1) Tape

2) Other

Enter choice (1-2):
```

Depending upon your preferences, choose your backup device. If you choose Tape, continue with step 5. If you choose Other, continue with step 9.

5. Press the **Enter** key.

The backup process begins.

If more than one tape is required, the program displays the following message:

```
End of medium on "output".
Please remove the current tape, number it,
insert tape number x, and press Enter
```

If you receive the message displayed above, insert the next tape and allow it to rewind. When it is properly positioned, press the **Enter** key.

- 6. When the backup is completed, the system displays information according to the number of tapes that are required for the backup:
 - If the number of tapes required is one, the system displays the following message:

```
xxxxxx blocks
Tape Verification
xxxxxx blocks
WARNING: A CMS Full Maintenance Backup in addition to this cmsadm backup
must be done to have a complete backup of the system. . . . .
```

Please label the backup tape(s) with the date and the current CMS version $(\ensuremath{\mathsf{Rxxxxx.x}})$

 If the number of tapes required is more than one, the system displays the following message:

xxxxxx blocks Tape Verification Insert the first tape Press Return to proceed :

If you receive the message displayed above, insert the first tape used in the backup and press the **Enter** key. Wait for the tape drive light-emitting diode (LED) to stop blinking before you remove the tape. When prompted, repeat this process for any additional tapes generated by the backup process.

When the final tape is verified, CMS displays the following message:

```
xxxxxx blocks
Tape Verification
xxxxxx blocks
WARNING: A CMS Full Maintenance Backup in addition to this cmsadm backup
must be done to have a complete backup of the system. . . .
Please label the backup tape(s) with the date and the current CMS version
(Rxxxxx.x)
```

- 7. Label all tapes with the following information:
 - Tape number
 - Date of backup
 - Current version of Avaya CMS
- 8. Set the tape write-protect switch to read-only and put the tapes in a safe location.

If you have problems performing a CMSADM backup to tape, see the document, *Software Installation, Maintenance, and Troubleshooting*.

9. The system displays the following message:

```
Enter backup path (must not be located on CMS disk):
```

Enter the directory of the network mounted file system that you wish to use for your backup, or the mount point of your USB storage device, and press the Enter key. If the directory is accessible for the backup, CMS displays the following message:

Using file "/sss/CMSADM-<CMS load name>-<date-time>-<machine name>"

After the backup has been written, it is verified, and CMS displays the following message:

```
xxxxxx blocks
Backup Verification
xxxxxx blocks
WARNING: A CMS Full Maintenance Backup in addition to this cmsadm backup
must be done to have a complete backup of the system. . . .
Backup file is located at /xxx/CMSADM-<CMS load name>-<date-time>-<machine name>
```

Performing a maintenance backup

Since new data is written each day, you should frequently back up this data. Both the full and incremental backups can be scheduled to run automatically on a timetable.

Before you begin

The following items should be read and understood before performing a Maintenance backup:

- If you backup to tape, a sufficient supply of tapes should be available so that tapes can be rotated. One common plan is to keep seven tapes in stock and recycle them daily. A new tape is used each day of the week, and each week the sequence is repeated.
- Backups run in the background. You can exit the **Backup Data** window without affecting the backup.
- Running backups during archiving may cause performance problems. For best performance, run backups either before or after the archiving process.
- Currently supported tape drives can accommodate a full backup on one tape. Incremental backups may not need to be done. Full backups can be scheduled to run every day.

M Important:

The maintenance backup does *not* back up the *CMS* software, Solaris system files or non-*CMS* customer data on the system. For complete data recovery, both CMSADM and maintenance backups are required. See <u>Performing a CMSADM</u> <u>backup</u> on page 347 for instructions on how to run a CMSADM backup.

Permissions

To run a Maintenance backup you need *write* permission to the **Maintenance** subsystem.

Steps

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Operations** tab.
- 3. Depending on if you want to back up a single ACD or all ACDs, choose one of the following steps:
 - To back up a single ACD, enter the ACD identification in the **ACD**: field.
 - To back up all ACDs, make sure no ACDs are selected in the ACD: field.
- 4. Select Backup data in the Operations: list.
- 5. Select OK.

Supervisor displays the Backup Data window.

- 6. In the **Device name:** field, verify that the correct backup device is displayed. If you need to select another device, select **List devices** from the **Actions** menu.
- 7. If your device is tape, ensure that the **Verify tape can be read after backup?:** check box is selected.

It is recommended that you check the tape backup for readability. When the tape is being verified, a message displays in the **Status:** field. If the tape cannot be read a message displays in the **Errors:** field. See <u>Common backup error messages</u> on page 353 for information on additional error messages you may receive. If your device is a non-tape device (USB storage device or network), this check box is ignored.

- 8. In the ACD(s) to back up: field, select one of the following options:
 - The All ACD(s) option will back up data from all real ACDs (not pseudo-ACDs).
 - The **Current ACD** option will back up data from the ACD that is displayed in the bottom right corner of the **Backup Data** window.
- 9. The **Data to back up:** check boxes, by default, are all selected. If you do not want to back up the maximum amount of data, clear the types of data you do not want backed up.

For an explanation of the **Data to back up:** check box options, see <u>Description of the</u> <u>Backup Data window</u> on page 351.

10. From the **Actions** menu, select **Run**.

The backup process begins. When the backup process is complete, *Supervisor* displays an acknowledgement window.

If you have selected "Tape" as your backup device and your backup requires more than one tape, you will receive a message telling you to mount another volume to complete the backup.

11. When the backup completes, remove and label the tape(s) if your backup device is tape.

Description of the Backup Data window

This section includes the following topics:

- The Backup Data window on page 352
- Field descriptions on page 352
- Data to back up descriptions on page 352

The Backup Data window

Field descriptions

Fields in the Backup Data window are described as follows:

Field	Description
Backups completed today	Shows the number of backups completed for the current day.
Status	Shows the status of the current or most recent backup and what is currently being backed up.
Errors	Shows any errors found in the backup.
Device name	Displays the name of the backup device.
Verify tape can be read after backup?	Check box to request that the data be reread to ensure that the data has been backed up properly. This check box applies to tape backups only.
ACD(s) to back up.	Options to perform a backup of all ACDs or a single ACD.
Data to back up.	Series of check boxes where you can select the types of data you want to back up. See <u>Data to</u> <u>back up descriptions</u> on page 352 for additional information.

Data to back up descriptions

Descriptions of the types of data that may be backed up are described as follows:

Check Box	Description
Local System administration data	Includes IP addresses, port numbers, and other data configured at installation.
CMS System administration data	Includes user permissions, feature access permissions, Main Menu additional data, timetable, printer administration, default values, color choices, and custom report definitions (not the data associated with custom reports).

Check Box	Description
ACD-specific administration data	Includes Forecast data (if the feature is active), call work code administration data, VDN administration data, data storage allocation data, exception administration data, agent trace data (historical list of agents traced), and ACD-specific Dictionary names.
Historical data	Includes the historical data stored in the <i>CMS</i> database. There are two options for backing up historical data, Full and Incremental
	Full: includes data for all the time periods in the historical database. You must do a full backup before the first incremental backup. It is recommended that you periodically (for example, once a week) do a full backup of your system.
	Incremental: includes the <i>CMS</i> data recorded since the last backup (incremental or full) was completed. Only the historical data can be stored incrementally; administration data is stored in full.
Non-CMS data	Includes all data from <i>Informix</i> tables with names that start with c_{-} . The table definitions for non- <i>CMS Informix</i> tables are not backed up, these would be captured by a CMSADM backup.
Specific tables	Allows you to back up data from specific data tables. To backup specific tables, select Actions > Select tables . <i>Supervisor</i> then displays the Backup Data - Select Tables window. The Table name column shows the name of the data table and the Description column shows the type of data in the table. Select the check boxes for the tables you want to back up. Close the window when finished.

Common backup error messages

Common error messages and their solutions are described as follows:

Error	Solution
CMS cannot access the specified device.	Enter a new device name.
The volume mounted is bad (corrupt).	Mount a new volume.
A volume tape is not mounted in the drive.	Mount a volume.
The volume mounted contains CMS data that you might not want to overwrite.	Mount a different volume if you do not want to overwrite the data on the volume in the drive.

Error	Solution
The volume mounted is the last backup volume.	You have to mount a different volume. Unless you direct <i>CMS</i> to do so, it does not let you overwrite your last backup.
The volume mounted has errors.	Mount another volume.
A table cannot be backed up.	You must decide if you want to skip the table and continue or cancel the backup.

Labeling the backup volume

After a successful backup, CMS generates backup volume labels depending on the rules that apply to the particular backup device being used. This is "Tape" or "Other" in the new CMS systems.

Depending on the circumstances, CMS provides the following information:

- An acknowledgement window displays the final backup information. If the backup was scheduled on a timetable, the information is recorded in the Maintenance Error Log.
- An acknowledgement window displays a message indicating when a backup can write to a previously used tape.

Example backup information format and interpretation

```
      0001
      CMS-NNNNNN-NN-LLLL-NN-L-NN

      0002
      |
      |
      |
      |

      0003
      1
      2
      3
      4
      5
      6
      7
```

The following table provides information on the labels of backup tapes:

Part #	Code	Meaning
1	CMS	System name
2	NNNNN	Year, month and day of the backup (yymmdd)
3	NN	Number of backups for this day

Part #	Code	Meaning
4	LLLL	 Type of data backed up: A - ACD-specific administration data and historical data C - custom data H - historical data L - local system administration data M - ACD-specific administration data S - CMS system data X - no backup
5	NN	Number of the ACD (00 means All ACDs were selected on the Back Up window)
6	L	Backup mode (F for Full, I for Incremental)
7	NN	The tape number if this tape was part of a multi-tape backup.

If the device type is "Other", the file name for Maintenance backup has the same format as the tape label. For example, if you have performed a full Maintenance backup on your CMS server named sapsucker for all ACDs and all data types on September 18, 2010, the file name will appear in the directory as CMS-100918-01-LSAC-00-F-01.

Recovery kit

The recovery kit is composed of the backup media that the Avaya Technical Services Organization needs to restore service to your system if major problems occur. This kit should be stored in a secure location in order to minimize the time your system is out of service.

Recovery kit contents

The Recovery Kit contains the most recent:

- CMSADM backup tape (if your chosen backup device is tape)
- Full Maintenance backup tape and any Incremental backup tapes since the latest full backup (if your chosen backup device is tape)
- CMS Load DVD
- Patching DVDs
- If your chosen backup device is USB storage device, then your Recovery Kit should contain the appropriate USB storage device containing your CMSADM backup, along with the USB storage device containing your Full Maintenance backup.

• If your chosen backup device is network, you must manage the location of the CMSADM and Maintenance backups yourself.

Binary backup of database

The binary backup procedure will backup the entire database in binary form. Similar to the LAN backup and restore process, this procedure does not allow System data, Call Center Administration data or Historical data to be restored individually.

A Important:

Unlike tape devices, USB storage devices and network mount points must be monitored to ensure they are accessible. Timetables and Backup/Restore devices using USB storage devices and network mount points must be able to access these media sources to function properly. Remember to remount all non-tape media sources used by CMS, after any reboot of the system.

- If the binary backup is to tape, continue with Binary backup of database to tape on page 356.
- If the binary backup is to a USB storage device, continue with Binary backup of database to a USB storage device on page 357.
- If the binary backup is to a network mount point, continue with Binary backup of database to a network mount point on page 358.

Binary backup of database to tape

- 1. Log in to the CMS server as root.
- 2. Insert a blank tape into the tape drive.
- 3. Enter:

/cms/install/bin/db_backup <tape_device>

If a <tape_device> is not entered, the default device will be /dev/rmt/0c.

Note:

You can set up a cron job to run this command on a regular basis.

Binary backup of database to a USB storage device

USB storage device backups are considered permissive use. A new procedure is supplied to facilitate USB storage device backups. You should setup and verify as Avaya does not support debugging and setup of USB storage device backups.

As an option, the CMS server can be configured to utilize a USB storage device for the binary backup and restore. The binary backup can write backup data to a USB storage device. This procedure requires knowledge and experience with configuring and mounting USB storage devices.

Important:

Unlike a backup to a tape drive, the speed of a USB storage device is determined by the speed of the USB interfaces and the USB storage device.

To perform a USB storage device backup:

1. Insert a USB storage device and create a mount point, then mount the USB storage device to the CMS server.

Refer to Configuring and Connecting a USB storage device in the Avaya Software Installation, Maintenance, and Troubleshooting document for more information.

2. Modify /etc/vfstab to make sure your USB storage device mount point can survive reboot. However, if the USB storage device is moved to a different USB location, the / etc/vfstab entry will fail to mount after a reboot.

Important:

Unlike tape devices, USB storage devices and network mount points must be monitored to make sure they are accessible. Timetables and Backup/Restore devices using the USB storage devices and network mount points must be able to access these media sources to function properly. Remember to remount all non-tape media sources used by CMS, after any reboot of the system.

3. Create an empty file using the touch command.

Example: touch /<USB path>/<binary backup filename>

4. Run the backup using the following command:

/cms/install/bin/db backup /<USB path>/<binary backup filename>

5. Avaya recommends that binary backup files written to USB storage devices be saved to another location for disaster recovery.

Binary backup of database to a network device

Network backups are considered permissive use. A new procedure is supplied to facilitate network backups. You should setup and verify as Avaya does not support debugging and set up of network backups.

As an option, the CMS server can be configured to utilize a network device for the binary backup and restore. The binary backup can write backup data to a network device. This procedure requires knowledge and experience with network file system mounts.

Unlike a backup to a tape drive, the speed of a network backup is determined by your network bandwidth.

To perform a network backup:

- 1. Create a mount point, then mount a network file system to the CMS server.
- 2. Modify /etc/vfstab to make sure your network file system can survive reboot.
- 3. Create an empty file using the touch command.

Example: touch /<mount_point_path>/<binary_backup_filename>

4. Run the backup using the following command:

```
/cms/install/bin/db_backup /<mount_point_path>/
<binary_backup_filename>
```

Example to mount nfs to a Linux system:

```
mkdir /nfs
mount -o vers=3 <machine_name>:/cms_db_backup /nfs
touch /nfs/cms_db_backup
/cms/install/bin/db_backup /nfs/cms_db_backup/
<binary_backup_filename>
```

Restoring data

Use the **Restore Data** window to restore *CMS* data that has been lost due to system failure, disk crashes, or power outages. You can restore all *CMS* data files that you have previously backed up. You can also select which ACDs and *CMS* data to restore.

The **automatic** restore will restore all *CMS* data files from your last backup. Most data is restored by the automatic restore procedure.

The **manual** restore will restore specific *CMS* data files. The manual restore is used only when a select number of database tables need to be restored. A manual restore gives you control over which data is restored.

This section contains the following topics:

- <u>Before you begin</u> on page 359
- Permissions on page 359
- <u>Automatic restore</u> on page 360
- Manual restore on page 360
- Restore database from a binary backup on page 362

Before you begin

The following items should be read and understood before attempting to restore data:

- The Data Collection and CMS states must be set as noted for the following backups:
 - Local system administration data Data Collection off; CMS Single-user mode
 - CMS system administration data Data Collection on or off; CMS Single-user mode
 - ACD system administration data Data Collection on or off; CMS Single-user mode
 - Historical data, Non-CMS data, or specific tables Data Collection on or off; CMS Single- or Multi-user mode.
- Data must be backed up before it can be restored. To ensure the safety of your data, you should frequently back up your system.
- The restore procedure is run in the background. The **Status** field on the **Restore Data** window allows you to monitor the status of the restore process as it is performed.
- You can turn CMS back to multi-user mode when the Status field displays Restore is complete.

Permissions

To restore data you need *write* permission for the **Maintenance** subsystem.

Automatic restore

To have CMS automatically restore data from a backup:

From the Controller window, select Tools > Maintenance.

Supervisor displays the Maintenance window.

- 2. Select the **Operations** tab.
- Select Restore Data in the Operations: list.
- 4. Select OK.

Supervisor displays the **Restore Data** window.

The **Status:** field shows the status of the current restore or a previous restore if one has taken place.

The Errors: field will show any errors found during the restore.

5. Check the **Device name:** field to make sure the correct backup/restore device is selected.

If you want to use another backup/restore device, select Actions > List devices. Enter the correct backup/restore device name in the Device name: field.

This field defaults to the device named during installation.

- Select the Restore from last backup: check box.
- 7. From the Actions menu, select Run.

The system notifies you which volumes to mount to restore the data. At the end of every restored volume, the tables that have been fully or partially restored are displayed. If your device is "Other", then the backup file will automatically be located for you. You only need to press the "Continue" key to perform the requested restore.

If the system asks for a tape that you cannot provide, you must cancel the restore process. The restore can be rerun if the tape is found.

Manual restore

The manual restore stops when severe errors occur or when you tell it there are no more volumes to restore. Select **Stop** to tell the restore process that you are finished. Do not select **Cancel** since it implies an abnormal termination. Cancelling a restore leaves the data that has already been restored in the tables, which may result in the database being in an abnormal state. You will receive an acknowledgment window asking if you are sure you want to cancel the restore.

To manually restore data:

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Operations** tab.
- 3. Select **Restore Data** in the **Operations:** list.
- 4. Select OK.

Supervisor displays the **Restore Data** window.

The **Status:** field shows the status of the current restore or a previous restore if one has taken place.

The **Errors:** field will show any errors found during the restore.

5. Check the **Device name:** field to ensure that the correct backup/restore device is selected.

If you want to use another backup/restore device, select **Actions > List devices**. Enter the correct backup/restore device name in the **Device name**: field.

This field defaults to the device named during installation.

A Important:

If your backup device is tape, do not select the **Restore from last backup:** check box. A manual restore will accept any tape you mount as long as the data on the tape corresponds with the requested data.

- 6. In the **Start date:** field, enter the oldest date to be included in the restore by using one of the following methods:
 - Enter the date in the mm/dd/yy format.
 - Use the drop down calendar to select a date.
 - Enter the date in relative format; for example, 0 for today and -1 for yesterday.
- 7. In the **Start time:** field, enter the time you want to start restoring data. Use the format of hh:mm XM when entering the time where hh is hours, mm is minutes, and XM is AM or PM.

If you wanted to restore data starting at 1:15 AM, you would enter 01:15 AM

If AM or PM is not specified, a 24 hour clock is assumed.

- 8. In the **Stop date:** field, enter the most recent date to be included in the restore.
- 9. In the **Stop time:** field, enter the time you want to stop restoring data. Use the format of hh:mm XM when entering the time.
- 10. In the ACD(s) to restore options, select either All ACDs or Current ACD.
- 11. In the **Data to restore:** group, select the types of data you want to restore.

12. If you do not select **Specific tables**, go to Step 16. Otherwise, select **Actions > Select tables**.

Supervisor displays the Restore Data - Select tables window.

If you are performing the **Specific tables** restore, you cannot restore any other information at the same time. This includes:

- Local system administration data This data can only be restored once. A second attempt will corrupt data.
- CMS system administration data
- ACD system administration data
- Historical data
- 13. Select the tables you want to restore.
- 14. From the Actions menu, select Modify.
- 15. Close the **Restore Data Select tables** window to return to the **Restore Data** window.
- 16. From the **Actions** menu, select **Run**.

Restore database from a binary backup

The binary backup does not back up the CMS software, Solaris system files or non-CMS customer data on the system. For complete data recovery, both a CMSADM restore and a binary restore are required. See *Avaya CMS Software, Installation, Maintenance, and Troubleshooting* document for instructions on how to perform a CMSADM restore and a binary restore.

Recommendation to restart your CMS server

Avaya recommends that you restart your CMS server once every three months for preventative maintenance reasons. Rebooting your CMS server should not take longer than 10 minutes and should be performed when the CMS server load is low.

Although rebooting your CMS server is not a requirement, periodically rebooting your CMS server is a recommended procedure targeted at minimizing the risk of a system failure. Restarting your CMS server lessens the possibility of your system being adversely impacted by anomalies such as memory leaks, packet loss, un-released file locks, data inconsistency, data corruption, and storage space fragmentation. These types of problems are known to occur on any computer system.

Avaya offers a High Availability solution if data loss from a server restart is a concern. The Avaya CMS High Availability (HA) solution provides an uninterrupted data stream between the communication server and two HA CMS servers. If you use the HA solution, restart each CMS server at a different time to prevent data loss.

Avaya support personnel who are performing system maintenance work may require you to restart your CMS system. If Avaya support personnel require you to restart your CMS system, they will work with you to determine the best time to perform the restart. Avaya support personnel will make every attempt to determine the root cause of any problem that might require a restart.

Connection status

You can use the **Connection Status** window to monitor the data link between the *CMS* processor and the Communication Manager system. You can also view the current status of the application, session, and connection layers of the link between the Communication Manager system and *CMS*.

This section contains the following topics:

- Permissions on page 363
- Viewing the connection status of an ACD on page 363
- Listing the connection status of all ACDs on page 364
- Description of the Connection Status window on page 365

Permissions

You need *read* permission for the **Maintenance** subsystem to view the **Connection Status** window.

Viewing the connection status of an ACD

To view the connection status of a single ACD:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Connection Status in the Operations: list.

4. Select **OK**.

Supervisor displays the Connection Status window.

5. In the **ACD(s):** field, enter the name or number of the ACD or ACD Group.

See <u>Description of the ACD Status window - with EAS</u> on page 330 or <u>Description of the ACD Status window - without EAS</u> on page 330 for additional information about the fields present on the **Connection Status** window.

6. From the Actions menu, select Find one.

Supervisor displays the Connection Status window for the selected ACD.

Listing the connection status of all ACDs

To list the connection status of all ACDs:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Connection Status in the Operations: list.
- 4. Select OK.

Supervisor displays the Connection Status window.

See <u>Description of the ACD Status window - with EAS</u> on page 330 or <u>Description of the</u> <u>ACD Status window - without EAS</u> on page 330 for additional information about the **Connection Status** window fields.

- 5. If the ACD(s): field is not clear, select Edit > Clear all.
- 6. From the Actions menu select List all.

Supervisor displays the Connection Status - List All window.

Description of the Connection Status window

Field descriptions

The Connection Status Window contains the following fields:

Field	Description	Status Messages
ACD(s)	Enter the number or name of the ACD(s) for which you would like to check the connection status.	-
Application	Displays status for the application layer of the link between the	waiting session - The application layer is inactive. This is the state of the application layer when the system is first powered on.
	Communication Manager system and <i>CMS</i> .	translation pumpup - CMS is receiving translations from the Communication Manager system. Translations are needed for CMS to correctly track the ACD calls coming from the switch.
		data transfer - The application layer can receive and transmit data successfully.
		not collecting data - Data collection has been turned off.
		CMS System Setup - The link has gone down. To resume data collection, use the Data Collection window
		busied out (switch) - The link between CMS and the Communication Manager system has been busied out from the switch side, usually to change switch translations.
Session	Displays status for the session layer of the link between the	quiescent - The session layer is inactive. This is the state of the session layer when the system is first powered on.
	Communication Manager system and <i>CMS</i> .	waiting acceptance - The session layer is waiting for the connection layer to become operational and for the remote session layer to accept the session.
		data transfer - The session layer can now transmit and receive data from the Communication Manager system.

Field	Description	Status Messages
Connection	Displays status for the connection layer of the link between the Communication Manager system and <i>CMS</i> .	 quiescent - Indicates that the connection is inactive. This is the state of the connection when the system is first powered on. out of order - Something is wrong with the connection to the Communication Manager system. For example, the network connection between the Communication Manager system and <i>CMS</i> is currently unavailable. operational - The connection can transmit information physically between the Communication Manager system and <i>CMS</i>. waiting session accept - The link is down.
Date/Time	Displays the date/time for the ACD, unless the link to the ACD is down when <i>CMS</i> is brought up. If this happens, <i>CMS</i> uses the Solaris system time until the link is reestablished.	
Errors	Displays any errors found.	

Administering a printer

Use the **Printer Administration** window to assign a name, description, and options to a printer that can be used by terminals connected to *CMS*. Users of *Supervisor* do not have access to printers assigned through this window but can use printers that are normally used through their Windows-based PC.

This section contains the following topics:

- Before you begin on page 367
- Permissions on page 367
- Adding a new printer on page 367
- Listing all printers on page 368
- Modifying printer options on page 368
- Deleting a printer on page 369

Before you begin

- Before you can assign a printer in the **Printer Administration** window, the printer must already be administered in the Solaris system. See the *Avaya CMS Terminals, Printers, and Modems* document for additional information about the *Port Administration Tool*.
- The printer set up as the default printer will receive all terminal requested print jobs, unless otherwise specified by the user.
- If jobs are sent to a printer that is no longer administered, the print job will be sent to the default printer and an error will be logged in the Maintenance Error Log.
- The name of a printer administered in the Printer Administration window can be used by terminal users as the default destination when printing historical reports.

Permissions

Depending on the procedure you want to perform, you will need the following permissions:

- To view the **Printer Administration** window, you will need *read* permission for the **Maintenance** subsystem.
- To add, delete, or modify the **Printer Administration** window, you will need *write* permission for the **Maintenance** subsystem.

Adding a new printer

To add a new printer to the CMS server:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select **Printer Administration** in the **Operations:** list.
- 4. Select OK.

Supervisor displays the Printer Administration window.

5. In the **CMS printer name:** field, enter the name of the new printer.

The name assigned to the printer must be unique from all other installed printers; however, it can be assigned the same name it was given during the Solaris administration.

6. In the **LP printer name:** field, enter the name assigned to the printer when it was administered in Solaris.

- 7. In the **Description:** field, enter any additional information to identify the printer.
- 8. If the printer uses IBM graphic characters, select the **IBM graphic characters:** check box. Otherwise, leave the check box cleared.
- 9. In the **Lines per page:** field, enter the number of lines that fit on a page.

The default is 66 lines. CMS formats reports to correspond to the value in this field.

- 10. In the **Print type:** options select one of the following choices:
 - Select Normal (default setting)
 - Select **Other**. Then, in the corresponding field, enter the specific print type such as pica, elite, **or** compressed.
- 11. If you want a banner to be printed for every print job, select the **Banners:** check box. A banner is a cover sheet that identifies the user who requested the print job.
- 12. From the **Actions** menu, select **Add**.

Listing all printers

To list all printers defined on the CMS server:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select **Printer Administration** in the **Operations:** list.
- 4. Select OK.

Supervisor displays the Printer Administration window.

5. From the Actions menu, select List all.

Supervisor displays the Printer Administration - List All window.

Modifying printer options

To modify the options for a printer currently existing on the CMS server:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select **Printer Administration** in the **Operations:** list.

4. Select OK.

Supervisor displays the Printer Administration window.

- 5. Perform one of the following procedures to select the correct printer:
 - If you know the name of the printer, enter the name of the printer in the CMS printer name: field, and then press the Enter key.
 - If you do not know the name of the printer, perform the following:
 - 1. From the Actions menu, select Find one.
 - 2. If more than one match is found, go to the **Actions** menu, and select **Next**. Repeat this step until the printer you want to modify is displayed.

A Important:

You cannot modify the name of a *CMS* printer. If you want to change a printer name, you must delete the printer and add it again with a new name. See <u>Deleting a printer</u> on page 369, and <u>Adding a new printer</u> on page 367 for more information.

- 6. Make changes to any of the fields in the **Printer Administration** window, except the **CMS printer name:** field
- 7. From the Actions menu, select Modify.

Deleting a printer

To delete a printer currently defined on a CMS server:

- From the Controller window, select Tools > Maintenance.
 Supervisor displays the Maintenance window.
- 2. Select the **Operations** tab.
- 3. Select Printer Administration in the Operations: list.
- 4. Select OK.

Supervisor displays the Printer Administration window.

- 5. Perform one of the following procedures to select the correct printer:
 - If you know the name of the printer, enter the name of the printer in the CMS printer name: field, and then press Enter.
 - If you do not know the name of the printer, perform the following:
 - 1. From the **Actions** menu, select **Find one**.
 - 2. If more than one match is found, go to the **Actions** menu, and select **Next**. Repeat this step until the printer you want to delete is displayed.

6. From the Actions menu, select Delete.

If you try to delete a printer that is assigned to users, you will receive a message asking if you still want to delete the printer.

Users assigned to this printer will not have another printer assigned when it is deleted.

Maintenance reports

This section provides information to help you set up and run the reports. Avaya CMS administrators and users with read permission for the Maintenance tool can display the Maintenance reports.

The Reports section of the Maintenance system helps you:

- Identify problems and facilitate the work necessary
- Aid Services personnel in clearing problems in your system
- Track changes made to the ACD by users

There are two reports available from the Maintenance subsystem:

- Maintenance Error Log on page 370
- ACD Administration Log on page 396

Maintenance Error Log

Use the Maintenance Error Log Report to aid you in working on system problems and to aid Services personnel in clearing problems from your system. The Maintenance Error Log displays a chronological list of warnings, information, and errors detected by *CMS*.

This section contains the following topics:

- Before you begin on page 371
- Running a Maintenance Error Log on page 371
- <u>Severity of errors</u> on page 372
- <u>Maintenance Error Log messages</u> on page 372

Before you begin

The following items should be read and understood before working with the Maintenance Error Log:

- The Maintenance Error Log can contain 500 entries. When the log reaches 500 records the next record will overwrite the oldest record.
- The entries in the Maintenance Error Log are displayed in chronological order, starting with the most recent entry.
- You can search the log by error severity or by error code
- The results of all archives and backups are written to the Maintenance Error Log.
- If you have *Avaya CMS Forecast*, the results of the **Forecast Manager** are written to the Maintenance Error Log.

Running a Maintenance Error Log

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Reports** tab.
- 3. Select Error Log Report in the Reports: list.
- 4. Select OK.

Supervisor displays the Maintenance Error Log window.

- In the ACD: drop down list, enter the ACD on which you want to see an error log or select All to include all ACDs. Selecting an ACD Group shows the error logs for only the member ACDs of that group.
- 6. If the **Error codes:** field is blank, all error codes are displayed in the error log report. If you only want the report to include specific error codes, enter the necessary codes in the **Error codes:** field.
- 7. In the **Severities:** drop down list, enter the severity of errors you want to see the report or select **All Severities** to include errors of any severity.

See <u>Severity of errors</u> on page 372 for additional information on error code classifications.

- 8. In the **Dates:** field, enter the amount of time that the report will include through one of the following methods:
 - Enter the date(s) in the MM/DD/YY format.
 - Use the history list to select the dates.
 - Use the Browse button to select the dates
 - Enter the date in relative format; for example, 0 for today, -1 for yesterday.
- 9. Select one of the following **Destination:** options:

- To display the Maintenance Error Log on the monitor, select **View Report on Screen**.
- To send the Maintenance Error Log to a printer, select **Print Report**.
- 10. Select OK.

Supervisor displays the Maintenance Error Log Report.

See <u>Maintenance Error Log messages</u> on page 372 for additional definitions for the possible error messages.

Severity of errors

The following list describes the error classifications in the Maintenance Error Log:

- ALARM This type of entry could cause the system to crash or fail. You must work with Avaya Services to avoid the possibility of system failure.
- ERROR This type of entry needs immediate action. For example, a backup may not be working properly.
- INFO This type of entry does not need immediate action but is listed either to let you know that some aspect of the system is not operating correctly or to indicate the status of an operation. For example, **Successful**.

Maintenance Error Log messages

The Maintenance error codes and related messages are organized by error code number. If any of the solutions do not resolve the problem you are experiencing, contact your *CMS* services representative. If a reference to a task number is shown in the Maintenance Error Log, give the number to the *CMS* services personnel.

The following table lists the possible error codes as well as the related information:

Error Code	Message	Reason/Action
500	UNIX error on OPEN, file: <filename></filename>	Could not write a file which is part of a timetable. One or more timetable tasks may be corrupted.
505	UNIX error on WRITE, file: File system may be out of space.	Error in writing the file. Potential file space problem.

Error Code	Message	Reason/Action
505	The following two errors are found together: UNIX error on WRITE, file: SIGPIPE signal caught during printing, print request is incomplete or failed UNIX error on WRITE, file: lp. The user may have no default printer assigned and the UNIX(r) system administration for a default system line printer has not been done.	Could not print a file. The Solaris server probably does not have a default system line printer assigned, and the user probably does not have a <i>CMS</i> default printer assigned. Administer a default printer with Solaris. Select the <f3> key -> Options -> default printer to assign a default printer to a user. Ensure that the user has the appropriate permissions to the printer in the User Permissions subsystem.</f3>
555	UNIX error on EXEC: Couldn't execute the following command: <user command=""></user>	System is too busy for command to be processed.
555	UNIX error on EXEC: CMS couldn't run because crt_io_man wouldn't execute	System is too busy for command to be processed.
556	UNIX error on FORK: CMS couldn't run because the system was too busy.	System is too busy for command to be processed.
556	UNIX error on FORK: UNIX process limit exceeded, system is too busy	<i>CMS</i> was unable to start a process. This occurs most likely if a user is logged into <i>CMS</i> through multiple terminals. Make sure each user logs in on only one <i>CMS</i> terminal/session at a time. If this message occurs when timetables are running, try adjusting the starting times of the timetables so that fewer are running simultaneously. If it occurs when running Main Menu Additions , try rewriting the Main Menu Additions to use fewer simultaneous Solaris processes.
556	UNIX error on FORK: Call records not being sent. Call Services.	The process for transferring external call records could not be started. Call Services.
557	UNIX call error: UNIX process limit exceeded. System is too busy	This error could occur for multiple reasons. Call services for assistance.

Error Code	Message	Reason/Action
557	UNIX call error: uucp failed	The uucp file transfer mechanism for the External Call Records feature has failed. The system will automatically retry the transfer. If it fails repeatedly, call Services.
1001	UNIX error on NEW Agent upper bound has been reached. You have administered more Agent Exceptions than are allocated. You must either delete unneeded exceptions or allocate more space in System Setup: Data Storage Allocation.	The exception distributor process (ED) is attempting to log more agent exceptions than will fit in the storage space allocated for them. Delete unneeded exceptions or allocate more space in System Setup > Data Storage Allocation .
1001	UNIX error on NEW Split upper bound has been reached. You have administered more Split Exceptions than are allocated. You must either delete unneeded exceptions or allocate more space in System Setup: Data Storage Allocation.	The exception distributor process (ED) is attempting to log more Split exceptions than will fit in the storage space allocated for them. Delete unneeded exceptions or allocate more space in System Setup > Data Storage Allocation .
1001	UNIX error on NEW Trunk group upper bound has been reached. You have administered more Trunk Group Exceptions than are allocated. You must either delete unneeded exceptions or allocate more space in System Setup: Data Storage Allocation.	The exception distributor process (ED) is attempting to log more Trunk Group exceptions than will fit in the storage space allocated for them. Delete unneeded exceptions or allocate more space in System Setup > Data Storage Allocation .
1001	UNIX error on NEW VDN upper bound has been reached. You have administered more VDN Exceptions than are allocated. You must either delete unneeded exceptions or allocate more space in System Setup: Data Storage Allocation.	The exception distributor process is attempting to log more VDN exceptions than will fit in the storage space allocated for them. Delete unneeded exceptions or allocate more space in System Setup > Data Storage Allocation .
1001	UNIX error on NEW Vector upper bound has been reached. You have administered more Vector Exceptions than are allocated. You must either delete unneeded exceptions or allocate more space in System Setup: Data Storage Allocation.	The exception distributor process is attempting to log more Vector exceptions than will fit in the storage space allocated for them. Delete unneeded exceptions or allocate more space in System Setup > Data Storage Allocation .

Error Code	Message	Reason/Action
1050	INFORMIX SQL syntax error:	The given SQL command is syntactically incorrect. Usually more details of the error are included. For customers, this error is reported via their custom report and is corrected there. For <i>CMS</i> , this is usually a software problem which may need reporting. Correct the SQL statement in the custom
		report.
1053	INFORMIX insert error	An internal error or a full ACD dbspace is preventing data from being inserted into the ag_actv database table.
		Make sure that there is enough room in the ACD dbspace that holds the table.
1100	IPC error on messages: message queue queue is NN% full	This message is logged when a message queue is more than 75 percent full. Each message queue is checked approximately once every two minutes. If this message is repeatedly logged, <i>CMS</i> is in danger of losing messages that may result in loss of customer data.
		Single occurrences of this message can be ignored. If it happens repeatedly, contact services for assistance. Try reducing your <i>CMS</i> usage while this message is being logged to reduce the chances of losing data. If this message occurs while you are doing a <i>CMS</i> backup, try doing the backup during a less busy period.
1302	302 PROCESS COMMUNICATIONS (PO) library error, function: ERROR - <harch> receiving too many exceptions too fast. Some exceptions have been discarded. Reduce the number of active</harch>	Exceptions are being generated faster than interval archiver process can handle them. This is the result of having too many exceptions activated, or having thresholds set to produce too many exceptions.
	exceptions or change thresholds so that fewer exceptions are triggered.	Reduce the number of active exceptions or change thresholds so that fewer exceptions are triggered.

Error Code	Message	Reason/Action
1302	PROCESS COMMUNICATIONS (PO) library error, function: ERROR - <idbm> receiving too many exceptions too fast. Some exceptions have been discarded. Reduce the number of active exceptions or change thresholds so that fewer exceptions are triggered.</idbm>	Exceptions are being generated faster than intermediate database manager interface process can handle them. This is the result of having too many exceptions activated, or having thresholds set to produce too many exceptions. Reduce the number of active exceptions or change thresholds so that fewer exceptions are triggered.
1302	PROCESS COMMUNICATIONS (PO) library error, function: ERROR - <spi> receiving too many exceptions too fast. Some exceptions have been discarded. Reduce the number of active exceptions or change thresholds so that fewer exceptions are triggered.</spi>	Exceptions are being generated faster than the switch interface process can handle them. This is the result of having too many exceptions activated, or having thresholds set to produce too many exceptions. Reduce the number of active exceptions or change thresholds so that fewer exceptions are triggered.
1350	GENERAL error internal to process: Unable to successfully complete archiving.	Unable to initialize <i>CMS</i> environment. Re-initiate Data Summarizing.
1350	GENERAL error internal to process: Failure in agent exception database table. Agent exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the agent exception table. The error can occur when the ACD dbspace holding the agent exception table becomes full. No more agent exceptions can be recorded until the problem is corrected.
1350	GENERAL error internal to process: Failure in link exception database table. Link exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the link exception (linkEx) table. The error can occur when the disk partition holding the link exception table becomes full. No more link exceptions can be recorded until the problem is corrected.

Error Code	Message	Reason/Action
1350	GENERAL error internal to process: Failure in malicious call trace exception database table. MCT exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the malicious call trace exception (mctEx) table. The error can occur when the disk partition holding the malicious call trace exception table becomes full. No more malicious call exceptions can be recorded until the problem is corrected. Call Services.
1350	GENERAL error internal to process: Failure in split exception database table. Split exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the split exception (spEx) table. The error can occur when the disk partition holding the split exception table becomes full. No more split exceptions can be recorded until the problem is corrected. Call Services.
1350	GENERAL error internal to process: Failure in trunk group exception database table. Trunk group exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the trunk group exception table. The error can occur when the disk partition holding the trunk group exception table becomes full. No more trunk group exceptions can be recorded until the problem is corrected. Call Services.
1350	GENERAL error internal to process: Failure in VDN exception database table. VDN exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the VDN exception (vdnEx) table. The error can occur when the disk partition holding the VDN exception table becomes full. No more VDN exceptions can be recorded until the problem is corrected. Call Services.
1350	GENERAL error internal to process: Failure in vector exception database table. Vector exception data not being stored. Call Services.	This error message is logged when the exception distributor process is unable to insert rows in the vector exception (vecEx) table. The error can occur when the disk partition holding the vector exception table becomes full. No more vector exceptions can be recorded until the problem is corrected. Call Services.

Error Code	Message	Reason/Action
1350	GENERAL error internal to process: CMS task limit exceeded, system is too busy	This message means that a <i>CMS</i> task cannot be created because <i>CMS</i> is already running the maximum number of tasks.
		Make sure each user logs in to <i>CMS</i> only once. If this message occurs when timetables are running, try adjusting the starting times of the timetables so that fewer are running simultaneously. If it occurs when running Main Menu Additions , try rewriting the Main Menu Additions to use fewer simultaneous Solaris processes.
1350	GENERAL error internal to process: Update failure for <item searched=""> Too much data. Try again with a more restrictive search.</item>	Item searched for is too large. The search needs to be restricted further. Restrict the search to a smaller amount of data.
1350	GENERAL error internal to process: disk may be full.	Error in searching for item. Disk may be full. Clean up unnecessary files from disk.
1350	GENERAL error internal to	An internal error occurred that prevents
	process: Failure in removing data from database table: ag_actv. Agent Trace data not	data from being deleted from the ag_actv database table. Call Services.
4054	being stored. Call Services.	
1351	GENERAL error in process interface: Invalid action	Something is corrupted with the window interface.
	request.	Exit and re-enter the data summarizing window. Attempt to initiate data summarizing again.
1351	GENERAL error in process interface: Cannot archive a day which interval data does not exist for.	Interval data does not exist for the requested day or any day prior to the requested day. The number of days of interval data saved is based on the Days of Intrahour field set on the Data Storage Allocation window.
		Re-initiate Data Summarizing for a day that is within the number of Days of Intrahour saved. For future reference, the number of Days of Intrahour data can be increased. Disk space must be considered before changing this parameter.

Error Code	Message	Reason/Action
1351	GENERAL error in process interface: Cannot archive the requested week/month. Daily data does not exist for all tables for the week/month beginning xx/xx/xx.	Daily data does not exist for the requested week/month or any week/ month prior to the requested day. The number of days of interval data saved is based on the Days of Daily field set on the Data Storage Allocation window.
		Re-initiate Data Summarizing for a week/ month that is within the number of Days of Daily saved. For future reference, the number of Days of Daily data can be increased. Disk space must be considered before changing this parameter. If the number of Days of Daily is changed and intrahour daily data is present for the days of the requested week/month, those days can be archived and the week/month can then be archived.
1351	GENERAL error in process interface: ERROR - <arch> receiving too many archive requests too fast. Some</arch>	Too many data summarizing requests (more than 25) have been initiated in a short period of time (approx. 1/2 hour) and cannot all be processed.
	requests have been discarded.	Determine all data summarizing requests that have been initiated. Once all requests have been processed, verify the requests against the completed archives (as reported in /cms/dc/archive/ arch.log). Re-initiate archive for the date and archive (daily/weekly/monthly) for the archives not initiated. In the future, do not initiate all requests at once.
1351	GENERAL error in process interface: Cannot archive a day in the future.	The date of the requested archive has not happened yet. Re-initiate the daily archive for a date prior to today.
1351	GENERAL error in process interface: Cannot archive a partial weeks/months data.	The last day for the week/month has not been archived yet. Verify that a weekly/monthly archive is not being requested for the current week/
		month. That is, the end of the week/ month has not been reached yet. Re-initiate the weekly/monthly archive for a week/month in which the last day has already been archived.

Error Code	Message	Reason/Action
1351	GENERAL error in process interface: stopping task id to free up message queue	A message queue is more than 85 percent full and the task that should be reading from the queue is apparently stuck. This message is logged when CMS restarts the task to attempt to clear the error condition. Depending on which task has been stopped, it is likely that some customer data has been lost.
		Report the problem to services. If this error is logged repeatedly, try reducing your <i>CMS</i> usage while this message is being logged to reduce the chances of losing data. If this message occurs while you are doing a <i>CMS</i> backup, try conducting the backup during a less busy period.
1351	GENERAL error in process interface: External applications not started. Set to OFF	When the External Application feature was started, there was some general error. The feature was turned back off because of this error.
		Request help from your External Application provider (Avaya Professional Services Organization).
1351	GENERAL error in process interface: Activate Agent Trace request failed. Try again.	This error is logged when the agent activity recorder process (AAR) has too many messages in its message queue to accept any more. This can occur when many very active agents are being traced, keeping aar's queue full.
		Trace fewer agents or try this request again later.
1351	GENERAL error in process interface: Task < task_num> of	Timetable ran and has a status other than Successful .
	timetable <name> may not have completed, window status was: <status></status></name>	Based on what the timetable was, examine the state of things (database, ACD administration, etc) to see if the request completed. If desired, complete the action manually by running <i>CMS</i> now.
1400	SPI session error: data collection session is down	An error has occurred in the X.25 connection to the switch. <i>CMS</i> data is not being collected. <i>CMS</i> will automatically try to restore the link.
		If the link does not re-establish by itself within five minutes, check the cables, modems, and other hardware between the <i>CMS</i> and the switch for any obvious loose connections.

Error Code	Message	Reason/Action
1404	SPI configuration error: Insufficient unmeasured trunks allocated. To avoid further data loss, go to Data Storage Allocation and administer more unmeasured trunk facilities.	There are not enough unmeasured trunks allocated in the <i>CMS</i> realtime database to track all calls. This message is logged once during each data collection interval when the error condition occurs. When this message appears, some call data has already been lost. Data will continue to be lost until more trunk facilities have been allocated. Allocate more unmeasured trunk facilities in the Data Storage Allocation screen.
1404	SPI configuration error: Switch and UNIX clocks differ by more than 24 hours. Switch clock is <nn:nn:nn nn=""> UNIX clock is <mm:mm:mm mm=""> Data collection will remain down until switch or UNIX clock is reset so they agree.</mm:mm:mm></nn:nn:nn>	<i>CMS</i> requires that the times on the Communication Manager and Solaris systems remain within 24 hours of each other. This is done to prevent an accidental deletion of all historical data if someone were to inadvertently change the clock to a date far into the future. If the Solaris clock is correct but the Communication Manager clock is incorrect, reset the clock at the switch. <i>CMS</i> will bring the link up automatically within five minutes after correcting the switch clock.
1404	SPI configuration error: Extension <number> has been staffed by two different login IDs: <first> and <second>. Data will be tracked only for the last login ID. Ask the agent to log off and log in again with a single login ID.</second></first></number>	Protocol error as explained in the message. Ask the agent to log off and log in again with a single login ID.

Error Code	Message	Reason/Action
1404	One of the following messages will be displayed depending on the switch configuration: Two agents at extensions <ext>in split <num> and <ext>in split <num> are logged in with the same login ID: <id> This may indicate table corruption on the switch. Contact Services to repair table as soon as possible. Two agents at extensions <ext> and <ext>are logged in with the same login ID: <id>. This may indicate table corruption on the switch. Contact Services to repair table as soon as possible.</id></ext></ext></id></num></ext></num></ext>	Protocol violation or switch corruption. Try requesting new translations in Maintenance: ACD Status screen. If the problem persists, call Services.
1404	One of the following messages will be displayed depending on the switch configuration: SPI configuration error: Agent <logid> at extension <ext>has logged into too many splits: <spl>, and <sp2>. Data will only be tracked for the last split. This may indicate incorrect switch type on CMS for G3. SPI configuration error: Agent <logid> at extension <ext> has logged into too many splits: <spl>, <sp2>, <sp3>, and <sp4> . Data will only be tracked for the last split. This may indicate incorrect switch type on CMS for G3. SPI configuration error: Agent <logid> at extension <ext> has logged into too many splits: <spl>, <sp2>, <sp3>, and <sp4> . Data will only be tracked for the last split. This may indicate incorrect switch type on CMS for G3. SPI configuration error: Agent <logid> at extension <ext> has logged into too many splits: <sp1>, <sp2>, <sp3>, <sp4>, and <sp5>. Data will only be tracked for the last split. This may indicate incorrect switch type on CMS for G3.</sp5></sp4></sp3></sp2></sp1></ext></logid></sp4></sp3></sp2></spl></ext></logid></sp4></sp3></sp2></spl></ext></logid></sp2></spl></ext></logid>	Switch type mismatch, protocol violation or switch table corruption. Try requesting new translations in Maintenance: ACD Status screen. If the problem persists, call Services.

Error Code	Message	Reason/Action
1406	SPI data message error: ERROR can't new a message (or got illegal opcode)	This generally indicates that there is a mismatch between the administered <i>CMS</i> type on the Communication Manager system and the actual <i>CMS</i> or there is a mismatch between the administered switch type and feature set of the switch on the <i>CMS</i> . This results in message formats being of unexpected lengths. Data is lost since the remainder of the buffer is discarded after the unknown message. Determine if the problem happens more than once. Call Services.
1407	SPI timer expired error: there is no response from the switch	<i>CMS</i> has stopped receiving messages from the Communication Manager system. <i>CMS</i> data is not being collected. <i>CMS</i> will automatically try to restore the link. At the switch, perform a busy out and release the MIS connection.
1409	SPI ACD administration error: switch was unable to logon agent <logid> with skill <num></num></logid>	For some reason the login failed on the switch. This login may have been part of a Move Agent or Change Agent Skills request which was pending.
		Have the agent try to log in to the skill again. Or put the agent in the AUX workmode for all skills and have no calls on their set. Repeat the administration request. If the request fails again, collect the information from the status window for Services.
1409	One of the following messages will be displayed: SPI ACD administration error: switch unable to move ext <ext> from split <num> to <num></num></num></ext>	Previous ACD administration request for moving an agent or changing an agent's skills was pending. When the pending was resolved, the agent could not be moved for some reason.
	SPI ACD administration error: switch unable to move ext <ext> from split <num></num></ext>	Put the agent in the AUX workmode for all split/skills and have no calls on their set. Repeat the administration request. If the request fails again, collect the information from the status window for Services.
1501	SCREEN MANAGER error: system may be overloaded by real time reports behind by XX seconds.	<i>CMS</i> is behind on refreshing the real-time reports currently running. Run fewer real-time reports or lengthen refresh rates for the reports currently running.

Chapter 11: Maintaining CMS

Error Code	Message	Reason/Action
1600	FORECAST status: Forecast Manager failed for mm/dd/yy	Forecast Manager failed in its attempt to perform the daily data collection and/or the current day report for mm/dd/yy.
		If the date is invalid, correct the date and rerun the report. If it is not a problem with the date, call Services for assistance.
1600	FORECAST status: Forecast Manager failed for mm/dd/yy - mm/dd/yy	Forecast Manager failed in its attempt to perform the recollect data for a range of dates mm/dd/yy - mm/dd/yy. The first date is the start date and the second date is the stop date.
		If the dates are invalid, correct the date and rerun the report. If it is not a problem with the date, call Services for assistance.
1700	BACKUP Process out of sync. Contact Services.	A bad message was received from the backup screen. If this occurs, some sort of interference may have occurred in the message queue between the backup process and backup screen. If the problem re-occurs, something is impacting the communication between the processes. Further investigation is necessary to determine the source of the problem.
		Exit the current instance of the backup screen and re-initiate the backup. Verify that the problem does not re-occur.
1701	BACKUP Process out of memory. Contact Services.	If this error occurs, it is when the tape is being verified, but after the backup has already completed successfully. If tape verification is not essential, no further action is necessary. This error indicates a problem with memory allocation.
		Exit the current instance of the backup screen and re-initiate the backup. Verify that the problem does not re-occur.
1702	BACKUP Process startup failed. Contact Services	Any number of startup activities could cause this problem. Most are message and database activities that should never be encountered. If the problem re-occurs, something is peculiar in the environment of the backup process and further investigation is necessary to determine the source of the problem.
		Exit the current instance of the backup screen and re-initiate the backup. Verify that the problem does not re-occur.

Error Code	Message	Reason/Action
1703	BACKUP Volume access failed. Retry Backup.	A problem accessing the backup device has occurred. This problem could range from an invalid backup device to the tape drive requiring cleaning.
		 Verify the following: The backup device is administered properly (name corresponds with Solaris administered device)
		• The tape compatibility is correct(320 meg tape for 320 meg drive, etc.).
		• The tape drive is clean.
1704	BACKUP Volume check failed. Retry Backup.	Either the inserted tape is a recent backup and backup was initiated in timetable or backup had difficulty determining the most recent backup (either full or incremental) volume.
		Determine if the inserted tape is associated with the most recent backup (full or incremental). Replace the tape and re-execute backup (or services run br_check).
1705	BACKUP Volume verification failed. Retry Backup.	A problem reading the tape exists. Exit the current instance of the backup screen and re-initiate the backup. Verify that the problem does not re-occur.
1706	BACKUP Table backup failed. Retry Backup. Table=	A problem was encountered either reading the indicated table or writing that table to tape.
		Replace the tape with a new tape (after verifying no problems with the indicated table) and re-execute the backup process. Verify that the problem does not re-occur.
1707	BACKUP Volume span failed. Retry Backup	When verifying the backup tape, a problem was discovered between the current volume and the previous volume. Most likely, the blocks are out of sequence. More specifically, at least 1 block is missing.
		Re-execute the backup process. Verify that the problem does not re-occur.

Error Code	Message	Reason/Action
1708	BACKUP Error in process communication. Retry Backup.	This should never be encountered. A bad message was received from the backup screen (or erroneously from another process). If this occurs, some sort of interference occurred in the message queue between the backup process and backup screen. If the problem re-occurs, something is impacting the communication between the processes. Further investigation is necessary to determine the source of the problem. Exit the current instance of the backup screen and re-initiate the backup. Verify that the problem does not re-occur.
1709	BACKUP Backup history update failed. Retry Backup.	This should never be encountered. The backup was completed successfully. A problem exists with the update tables or the process to update the tables. Verify that the next backup does not encounter this problem.
1710	BACKUP Process in need of service. Please check the Backup screen.	An acknowledgement window is requiring a response. Respond to the backup acknowledgement window.
1711	INFO Warning backup waited 210/ 7200 seconds before archive completed.	The backup process waited 210 seconds for the current archiving process to finish. Backups should not be run during the archiving process. If this occurs consistently, consider rescheduling your archiving and backup processes so that overlap does not occur.
1711	ERROR backup terminated because archive did not complete within 2 hours.	The backup process waited two hours for the archiving process to be completed and was terminated as a result. Backups should not be run during the archiving process. Reschedule the backup and archiving processes so that simultaneous processing does not occur.
1711	BACKUP INFO:	Backup was initiated through a timetable and information is reported (number of volumes and backup completed) simply for information purposes. No action required

Error Code	Message	Reason/Action
1750	BACKUP Screen startup failed. Contact Services.	Any number of startup activities could cause this problem. Most problems deal with accessing screen entries and database activities that should never be encountered. If the problem re-occurs, something is peculiar in the environment of the backup process. Further investigation is necessary to determine the source of the problem. Exit the current instance of the backup screen and re-initiate the backup. Verify that the problem does not re-occur.
1751	BACKUP Screen execution failed. Retry Backup.	Any number of startup activities could cause this problem. Most problems deal with accessing screen entries and database activities that should never be encountered. If the problem re-occurs, something is peculiar in the environment of the backup process. Further investigation is necessary to determine the source of the problem. Exit the current instance of the backup screen and re-initiate the backup. Verify
		that the problem does not re-occur.
1800	RESTORE Process out of sync. Contact Services.	A bad message was received from the restore screen. If this occurs, some sort of interference occurred in the message queue between the restore process and restore screen. If the problem re-occurs, something is impacting the communication between the processes. Further investigation is necessary to determine the source of the problem.
		Exit the current instance of the restore screen and re-initiate the restore. Verify that the problem does not re-occur.
1801	RESTORE Process out of memory. Contact Services.	A problem with memory allocation exists. Exit the current instance of the restore screen and re-initiate the restore. Verify that the problem does not re-occur.

Chapter 11: Maintaining CMS

Error Code	Message	Reason/Action
1802	RESTORE Process startup failed. Contact Services	Any number of startup activities could cause this problem. If the problem re-occurs, something is peculiar in the environment of the restore process and further investigation is necessary to determine the source of the problem. Exit the current instance of the restore screen and re-initiate the restore. Verify
		that the problem does not re-occur.
1803	RESTORE Volume access failed. Retry Restore.	 A problem exists accessing the restore device. This could be an invalid restore device, the tape drive requiring cleaning, or a table header format problem (internal error). Verify the following: The backup/restore device is administered properly (name corresponds with Solaris administered device).
		• The tape compatibility is correct (320 meg tape for 320 meg drive, etc.).
		• The tape drive is clean.
1804	RESTORE Error in process communication. Retry Restore.	A bad message was received either by the restore screen or the restore process. If this occurs, some sort of interference occurred in the message queue between the restore process and the restore screen. If the problem re-occurs, something is impacting the communication between the processes. Further investigation is necessary to determine the source of the problem. Exit the current instance of the restore screen and re-initiate the restore. Verify that the problem does not re-occur.
1805	RESTORE Table restore failed.	A problem was encountered either
1000	Retry Restore. Table=	reading the indicated table from tape or writing that table into the database. Perform a specific table restore for the indicated table. Verify that the problem does not re-occur.
1806	RESTORE INFO: Volume contains no data for ACD=X	This is an Information message indicating that the current table for the indicated ACD does not have data.
		No action required.

Error Code	Message	Reason/Action
1850	RESTORE Screen startup failed. Contact Services.	Any number of startup activities could cause this problem. Most problems result from accessing screen entries that should never be encountered. If the problem re-occurs, something is peculiar in the environment of the restore process and further investigation is necessary to determine the source of the problem. Exit the current instance of the restore screen and re-initiate the restore. Verify that the problem does not re-occur.
1851	RESTORE Screen execution failed. Retry Restore.	Updating the status on the screen could cause this problem (although extremely rare). If the problem re-occurs, something is peculiar in the environment of the restore process and further investigation is necessary to determine the source of the problem. Exit the current instance of the restore screen and re-initiate the restore. Verify that the problem does not re-occur.
1900	SYSTEM MESSAGE OVERLOAD: Agent Trace (AAR) is overloaded, some agent trace data lost. Turn off traces for some agents to prevent possible further overloading.	AAR is receiving messages faster than it can process them. Turn off traces for some agents.
1900	SYSTEM MESSAGE OVERLOAD: Call History Recorder (ch_rec) overloaded, some call record data lost.	Data is being sent faster than it can be processed. This usually indicates that the system as a whole is overloaded. Stop some reports or applications so that the system capacity is increased.
1901	FULL DISK ERROR: Out of disk space. Data Collection failed (Archiver).	Enough disk space is not available for the insertion of daily/weekly/monthly archive data. Free up disk space or add more disk space in the form of additional hard disks.
1901	FULL DISK ERROR: Out of disk space. Harchiver could not write to <tablename>.</tablename>	Enough disk space is not available for the insertion of agent login/logout or interval archive data. Free up disk space or add more disk space in the form of additional hard disks. If the problem persists, call Services.

Chapter 11: Maintaining CMS

Error Code	Message	Reason/Action
1901	FULL DISK ERROR: cannot write to xxx.	The filesystem or ACD dbspace is out of disk space. Use Data Storage Allocation to adjust the amount of space available to the ACD.
1901	FULL DISK ERROR:	There is no more disk space to load the data for this pseudo-ACD. The load ACD process cannot continue. Delete the pseudo-ACD and start over again using a later "Start date" for the pseudo-ACD and load less data. Reduce the amount of historical data kept in other ACDs.
1901	FULL DISK ERROR: Automatically turning off data collection and bringing CMS to single user mode	All ACD dbspaces are checked for free space every 10 minutes. By turning off data collection and going to single user mode, <i>CMS</i> prevents corruption of the data that may occur if IDS tries to write data to a full ACD dbspace. <i>CMS</i> cannot be returned to its normal operational state until space has been made available in the ACD dbspace. Use Data Storage Allocation to adjust the amount of space available to the ACD.
1901	FULL DISK ERROR: WARNING: File system <filesys> is <nn> percent full.</nn></filesys>	This message is logged once each day near midnight and whenever <i>CMS</i> is started. The message is logged once for each file system or ACD dbspace that is at or beyond 80 percent of maximum capacity. This message is intended as an early warning that disk space may need to be reallocated. No immediate action is necessary.
1901	FULL DISK ERROR: Storage Interval Migration failed migrating	The disk or ACD dbspace is out of space. Use Data Storage Allocation to adjust the amount of space available to the ACD.
1901	FULL DISK ERROR	The dbspace containing the ag_actv database table is full. Change the allocation of disk space for the various classes of data to accommodate storage of more agent trace records.

Error Code	Message	Reason/Action
1901	FULL DISK ERROR: Out of disk space. Call Records not recorded.	The dbspace containing the call_rec database table is full. Change the allocation of disk space for the various classes of data to accommodate storage of more internal call records.
1901	FULL DISK ERROR: Call Records not being stored. Call Services.	The dbspace containing the external call records files is full. Call Services.
1902	CALL RECORD ERROR: Call Records not being stored. Call Services.	An error was encountered in writing call records to a disk file. Call Services
1902	ALL RECORD ERROR: Call Records are being collected again.	Previous errors writing files have been cleared and records are again being stored. No action necessary.
1902	CALL RECORD ERROR: Call Records not being stored, buffer area is full. Call Services	Files containing call records have not been successfully transferred. All storage space has been used and new records cannot be added. Call Services.
1902	CALL RECORD ERROR: Call rate exceeded capacity: xxx calls not transmitted	The internal Call History feature is activated but the call rate exceeds the maximum capacity handled by this feature; therefore, call records are not being sent to the Call History feature. This message indicates how many calls were not sent in the past data collection interval. This has no effect on the collection of regular data. Call Services.
2000	Could not run timetable: - Aborting Timetable. <timetable name></timetable 	Something is wrong with the timetable which is not allowing properly functionality. Try rescheduling the timetable. Consult the section on using timetables to see if there are erroneous tasks in the timetable.
2000	Could not run timetable: <timetable name=""> Task <number> of <total> was unable to complete. Reason: <reason></reason></total></number></timetable>	A timetable task is in error. One common possibility is that the user does not have permissions for the split, vdn, etc. for which they are running reports.

Error Code	Message	Reason/Action
2000	<pre>Could not run timetable: don't run timetable, in single user timetable = <timetable_name> <user_name></user_name></timetable_name></pre>	Timetables cannot run when <i>CMS</i> is in single user mode. An administrator has put <i>CMS</i> in single user mode as required by some special administrative tasks. The severity of the problem is that the user's timetables are not being run when expected. Schedule the timetables that should have run to be performed as soon as possible and then reschedule those timetables back to their original times. Schedule their timetables to run at a time that does not conflict during the time when <i>CMS</i> needs to be in single user mode.
2000	Could not run timetable: sorry post office open of timetable crt_io_man was not successful for timetable - <timetable name> and <cms id=""> - <user name>.</user </cms></timetable 	Communications cannot be established with a crt_io_man in order to run the timetable. Try rescheduling the timetable.
2000	Could not run timetable: Archiver <timetable name=""> did not run on <date> for the user - <user name="">. Please schedule it to rerun using the Data Summarizing screen.</user></date></timetable>	The Archiver has a problem in moving historical data into tables for the timetable to use. Call Services.
2000	Could not run timetable: Archiver <timetable name=""> did not run on <date> for the user - <user name="">. To schedule a timetable to run as soon as possible, enter a cms start time that is two minutes into the future, and a start date of 0.</user></date></timetable>	A user scheduled a timetable to run in less than two minutes into the future. Reschedule the timetable for at least two minutes into the future.
2100	Unable to execute <process>. <impact-description>.Call Services.</impact-description></process>	The specified process could not be executed. The impact is usually the failure of a major component of <i>CMS</i> such as Agent Trace, Exceptions, or Data Collection. This problem can usually be repaired by stopping <i>CMS</i> and restarting it. Call Services.
2200	Sometimes the problem can be repaired by stopping CMS and restarting it.	An error was encountered during migration. Call services for assistance.

Error Code	Message	Reason/Action
2300	INTERVAL MIGRATION: Interval migration was canceled before it completed. Restart it from the Storage Intervals screen to complete the migration	The migration was canceled manually before it completed. Restart the migration from the Storage Intervals screen.
2300	INTERVAL MIGRATION: Migrating intrahour historical data for ACD xx from xx to yy minute interval is complete.	This message indicates when intrahour migration is complete. No action required.
2400	FREE SPACE ALLOCATION: <error message></error 	This type of error message specifies that the Free Space Allocation feature has suffered a problem in locating or updating database tables. Contact services.
2500	STORAGE INTERVALS: Weekly start/stop day(s) have been changed from xx to yy.	This is an informational message indicating that the Storage Interval days have changed. Verify that the new days are correct.
2600	ARCHIVER status: Daily/Weekly/ Monthly Archive not executed for xx/xx/xx due to Data Storage Allocation administration.	Data Storage Allocation indicates 0 days/weeks/months are to be saved; therefore, no reason to archive data exists. This is most commonly a result of an error in user input. If daily archives are desired, Data Storage: Days of Daily/Weeks of Weekly/Months of Monthly entry(ies) must be changed to allow an archive to take place. Disk space must be considered before changing these fields.
2600	ARCHIVER status: Daily/ Monthly/Weekly Archiver for xx/ xx/xx Successful.	Indicates successful completion of the daily/weekly/monthly archive. The status of previous and current archives also exists in /cms/dc/archive/arch.log. No action necessary.
2600	ARCHIVER status: Daily/ Monthly/Weekly Archiver for xx/ xx/xx Failed.	Indicates failure of the daily/weekly/ monthly archive. The status of previous and current archives also exists in /cms/ dc/archive/arch.log. Re-initiate an archive for the same date and archive type (daily/weekly/monthly) using the CMS System Setup:Data Summarizing screen.

Error Code	Message	Reason/Action
2700	MIGRATE DATA Process out of sync. Call Services.	A bad message was received from the R3 Migrate screen. If this occurs, some sort of interference occurred in the message queue between the R3 Migrate process and the associated screen. If the problem re-occurs, something is impacting the communication between the processes. Further investigation is necessary to determine the source of the problem. Exit the current instance of the R3 Migrate screen and re-initiate the
		migration. Verify that the problem does not re-occur.
2701	MIGRATE DATA Process out of memory. Contact Services.	A problem with memory allocation has occurred.
		Exit the current instance of the R3 Migrate screen and re-initiate the migration. Verify that the problem does not re-occur.
2702	MIGRATE DATA Process startup failed. Contact Services	Any number of startup activities could cause this problem. If the problem re-occurs, there is an error in the environment of the migrate process and further investigation is necessary to determine the source of the problem. Exit the current instance of the R3
		Migrate screen and re-initiate the migration. Verify that the problem does not re-occur.
2703	MIGRATE DATA Volume access failed. Retry Restore.	A problem exists accessing the migration device. This could range from:
		 Invalid migration device
		Tape drive needs cleaning
		 Table header format problem (internal error).
		Verify the following:
		 The backup/restore device is administered properly (name corresponds with Solaris administered device)
		 The tape compatibility is correct (320 meg tape for 320 meg drive, etc.). The tape drive is clean.

Error Code	Message	Reason/Action
2706	MIGRATE DATA Table migration failed. Retry Migrate. Table=	A problem was encountered either reading the indicated table from tape or writing that table into the database. Stop the migration and call Services for help with the table that failed. After the problem is fixed, restart the migration.
2708	MIGRATE DATA Error in process communication. Retry Restore.	A bad message was received either by the R3 Migrate screen or the migration process. If this occurs, some sort of interference occurred in the message queue between the migration process and the R3 Migrate screen. If the problem re-occurs, something is impacting the communication between the processes. Further investigation is necessary to determine the source of the problem. Exit the current instance of the R3 Migrate screen and re-initiate the migration. Verify that the problem does not re-occur.
2750	MIGRATE DATA Screen startup failed. Contact Services.	Any number of startup activities could cause this problem. Most can be attributed to accessing screen entries that should never be encountered. If the problem re-occurs, something is in error in the environment of the migrate process and further investigation is necessary to determine the source of the problem. Exit the current instance of the R3 Migrate screen and re-initiate the migrate. Verify that the problem does not re-occur.
2751	MIGRATE DATA Screen execution failed. Retry Migrate.	This error can result when an update to the R3 Migrate screen fails. If the problem re-occurs, something is in error in the environment of the migrate process and further investigation is necessary to determine the source of the problem. Exit the current instance of the R3 Migrate screen and re-initiate the migration. Verify that the problem does not reoccur.

ACD Administration Log

The ACD Administration Log provides an audit trail for administrative changes made to an ACD by *CMS* users. The ACD Administration Log records real-time administrative changes made by a user through the *CMS* ASCII interface, *Supervisor*, or *Visual Vectors*. The log also records the administrative changes made by a user through a scheduled timetable or *Supervisor* script.

This section contains the following topics:

- Before you begin on page 396
- <u>Permissions</u> on page 396
- Running the ACD Administration Log report on page 397
- <u>ACD Administration Log window field descriptions</u> on page 398

Before you begin

The following items should be read and understood before working with the ACD Administration Log report:

- The maximum capacity for the log is set at 30,000 records and cannot be changed. When the table size exceeds 30,000 records, the 100 oldest records will be deleted.
- This report can be scheduled through a CMS timetable or a Supervisor script.
- The historical database items of the *CMS* ACD Administration Log is not available for use with the *Avaya CMS Supervisor Report Designer* tool. The *Supervisor* **File** menu option for this report will not display the **Designer** option. It will, however, behave in the same manner as drill-down reports.

Permissions

To view the ACD Administration Log report, the user ID used to log in to this *Supervisor* session requires *read* permission for the **Maintenance** subsystem.

A Important:

If the ACD Administration Log report is run to display all 30,000 records, your PC should have no less than 200 MB of free disk space to allow for the caching of this data.

Running the ACD Administration Log report

Steps

To run the ACD Administration Log report:

1. From the Controller window, select **Tools > Maintenance**.

Supervisor displays the Maintenance window.

- 2. Select the **Reports** tab.
- 3. In the **Reports:** list, select **ACD Administration Log Report**.

It is not necessary to select an ACD in the **ACD**: field as this feature allows ACD specification in a subsequent dialog.

4. Select OK.

Supervisor displays the ACD Administration Log window.

The height of this dialog box varies according to the current screen resolution of your PC. A higher screen resolution results in more fields being displayed.

For a description of the **ACD Administration Log** window fields, see <u>ACD Administration</u> <u>Log window field descriptions</u> on page 398 for additional information.

5. In the available fields, enter the data to use in the report. The data can also be selected through the drop-down history lists or through the Browse buttons.

The more fields that you specify, the more restricted the data will be that is used in the report. If all of the input fields are left blank, all records will be displayed.

- 6. In the **Destination** group, select one of the following output options:
 - View Report on Screen The report is displayed on the screen.
 - **Print Report on:** The report is sent to the specified printer. Any printer available to the PC can be used and selected through the button at the right of the field.
- 7. Select OK.

Supervisor displays the ACD Administration Log Report with the specified data.

ACD Administration Log window field descriptions

The following table provides descriptions for the fields on the **ACD Administration Log** window:

Field	Description
CMS User IDs:	The login(s) of the user(s) to display in the report. If changes were made to the ACD with the specified IDs, those user IDs and the associated changes will be displayed.
Dates:	The date or range of dates to be covered in the report. Only those administrative changes made on or within the date(s) specified will be present in the report.
Times:	A range of time for which log entries are to be displayed. Only those administrative changes made within this time range will be present in the report.
ACDs(n):	The ACD(s) to include in the report.
VDNs(n):	The VDN(s) to include in the report.
Vectors(n):	The Vector(s) to include in the report.
Agents(n):	The login ID(s) to include in the report.

Administering Report Properties

You can use the **Report Administration** window to impose a system wide limit on report queries. The system wide limit on report queries is implemented using the following two properties:

• You may impose a specific time limit, in 1 second increments, on historical report queries. That is, if a report query takes more than X seconds to return data from the Informix database, it times out. The range of allowed values is 3 to 999 seconds, or you may allow all historical report queries to run for an unlimited amount of time.

If the time limit for all historical reports is set to any value other than never (unlimited), a historical report whose query takes longer than the limit times out, and the user receives an error message.

• You may also limit the size of an agent group which is part of either a real time or historical query. The limit choices for agent group are groups of 30 members or less, or unlimited.

If the agent group limit is set to 30 members or less, a real time or historical agent group report which uses an agent group of 31 members or more does not run. The user receives an error message.

The system defaults for both of these properties are the unlimited value, and it changes only if you modify these properties with this window. The changes to this window take effect upon the next running report, and are imposed on all users. This window is only available from the ASCII interface and cannot be used from Supervisor.

Report limits apply to standard reports, custom reports, designer reports, and reports run from timetables. In the case of a report running from a timetable, if the report fails due to the set limits, the error is recorded in elog.

This window may be placed in a timetable. Therefore, if you wish to limit the properties of report queries only during certain times of the day, you can create two timetables. The first timetable should run at the beginning of your system's busiest time, and modifies the report properties to impose time limits. The second timetable should run at the beginning of your system's duiet time, and modifies the report properties back to unlimited.

Before you begin

• Examine the query log to determine if you have any reports which are adversely affecting your system performance due to the time spent on their Informix database query.

Note:

The report should be historical or real time, and it should use agent groups.

- Decide if you want to limit your historical report queries and what that limit, in number of seconds, should be
- Decide if you want to limit the size of agent groups used in agent group reports

Permissions

Depending on the procedure you want to perform, you need the following permissions:

- To view the **Report Administration** window, you need *read* permission for the **Maintenance** subsystem.
- To modify the **Report Administration** window, you need *write* permission for the **Maintenance** subsystem.

Modifying the Report Properties

The **Report Administration** window is only available from the ASCII interface of CMS.

- 1. From the Main Menu, choose **Maintenance**> and press **Enter**.
- 2. Choose **Report Administration** and press **Enter**.
- 3. Enter **n** in the first field if you wish to limit Agent Group reports to groups of 30 members or less. If you wish to allow all sizes of Agent Groups in queries, enter **y**.

- 4. Enter the number of seconds (**3 to 999**) in the second field if you wish to limit historical report queries to a specific time length. If you do not want a time limit to be enforced by the system, enter never.
- 5. From the Actions menu, select Modify.

Advanced Debugging window

Always call Avaya Support before you use this window. For more information, see:

http://support.avaya.com

Chapter 12: Using Solaris

Avaya CMS uses the Solaris operating system on the Sun computer platform to communicate with terminals and printers, to log errors, and to perform operations. This section addresses how to perform several procedures using Sun Microsystems, Inc. Solaris operating system commands.

This section contains the following topics:

- Before you begin on page 401
- Logging in to CMS on page 401
- Administering passwords on page 403

Before you begin

Be cautious when accessing the Solaris system and running Solaris system commands. Damage can result to your *CMS* system if you use the Solaris system commands incorrectly. Before you run any Solaris system command, be sure you know what effect it will have.

Logging in to CMS

This section contains procedures for logging in to *CMS* through methods other than using *Supervisor*. Some administrators will need to do this in order to access capabilities not available through the Supervisor interface.

This section contains the following topics:

- Logging in to CMS from the remote console on page 401
- Logging in to CMS from the server console on page 402

Logging in to CMS from the remote console

This procedure describes how to log in to *CMS* from a remote console. Most users log in to *CMS* remotely.

M Important:

Do not allow users to share the same login ID as this action will use up Solaris system processes.

Steps

1. At the Login: prompt, enter your login ID.

The Password: prompt is displayed.

2. Enter your password.

A prompt for the terminal type is displayed.

3. Enter your terminal type.

If you use a login other than cms, CMS will automatically open to the CMS Main Menu.

If cms is used as the login, you will have to enter cms a second time at the \$ prompt before the Main Menu will be displayed

Logging in to CMS from the server console

This procedure describes how to log in to CMS from the CMS server console. Logging in to CMS at the server is occasionally necessary in order to perform certain functions, such as a CMSADM backup or other administration functions that require you to switch to single-user mode.

A Important:

Users who use a /usr/bin/cms shell will not be able to log in to CMS through the Common Desktop Environment (CDE).

To remedy this problem, you can either use the /usr/bin/ksh shell or use a command line login. The command line login will not use the CDE.

Steps

To log in to CMS at the server:

1. If the server has just been rebooted or inactive for an extended period of time, the console may be password-protected. If this is the case, unlock the console by entering your authorized username (if necessary) and password in the appropriate login console fields.

Solaris displays the CDE interface.

2. Right-click the cursor in an empty area within the desktop space.

The Workspace Menu is displayed.

3. Depending on how CMS was installed, choose one of the following alternatives:

- If the CMS XTERM option is displayed in the Workspace Menu, you can open an xterm window directly by selecting that option.
- If the CMS XTERM option is not displayed, choose Tools > Terminal from the Workspace Menu to open a terminal window. At the command prompt, enter xterm to open an xterm window.

An xterm window is displayed with a # prompt.

Administering passwords

For system security, passwords are required for all *CMS* user login IDs. If a password is not entered on your first login, the system will prevent you from continuing until one is supplied.

CMS users can enter and change their passwords, but only a *CMS* administrator working on the Sun Microsystems, Inc. Solaris system can replace a forgotten password.

This section contains the following topics:

- <u>Before you begin</u> on page 403
- Changing a user's password on page 404
- Administering password aging on page 405

Before you begin

The following items should be read and understood before attempting to administer passwords:

- Password administration should only be done by an administrator with the password for the *root* user.
- Forcing a password change and administering the Password Aging feature can only be done through the *CMS* ASCII interface. The ASCII interface is available through the following methods:
 - A Terminal Emulator connection to the CMS server
 - A telnet session to the CMS server
 - Direct interaction with the CMS server
- Users should choose a password with no less than six characters. The password must have at least one character as a number or special character and have a minimum of two alphabetic characters.
- When changing a password, the new password must have at least three characters that are different from the previous password.

See <u>Chapter 9: Administering user permissions</u> on page 241 for more information on special characters.

Changing a user's password

When a user's password expires or it is forcibly made to expire by an administrator, the user is presented with a prompt or window during the *CMS* login process that allows the entry of a new password. The following procedure allows an administrator to cause a user's password to expire so that the user must enter a new password upon their next login attempt.

Steps

If a user forgets their password, perform the following procedure:

- 1. From the *CMS* **Main Menu**, highlight the **Commands** Screen-Labeled Key (SLK). *CMS* displays the **Commands** menu.
- 2. Select UNIX (r) system.

The screen clears and a \$ prompt is displayed.

3. Enter the following command:

su

4. At the Password: prompt, enter the root password.

The # prompt is displayed.

5. Enter the following command:

passwd <userid>

Where *<userid>* is the ID of the user who needs a new password.

Solaris displays a prompt for the new password.

6. Enter a new password for the user.

Solaris displays the # prompt.

7. Enter the following command:

passwd -f <userid>

Where *<userid>* is the ID of the user with a new password.

Solaris displays the # prompt.

The <code>passwd</code> -f command will force the user to change their password the next time they log in to CMS.

8. Enter the following command:

exit

Solaris displays the \$ prompt.

9. Enter the following command and press the Enter key:

exit

CMS displays the Main Menu.

Administering password aging

This section provides introductory and prerequisite information regarding the password aging feature of *CMS*.

Password aging is a feature that forces *CMS* users to change their password after a specified number of weeks have passed. Once this feature is activated, all users are required to change their passwords when the expiration period is reached.

Before you begin

Important:

If you have a custom configuration from the Avaya Professional Services Organization (PSO) or use third-party applications on your *CMS* server, you must contact the PSO before enabling the password aging feature so that customizations are not affected. The PSO can be contacted through the technical support telephone number.

The following items should be read and understood before attempting to change the password aging feature:

- The number of weeks that pass before a password change is required can range from 1 to 52 weeks. The default value for this feature is 9 weeks.
- The password aging feature is only available through the cmsadm menu in the ASCII interface of CMS. This feature is not accessible through Avaya CMS Supervisor.

Steps

For more information and procedures for administering the password aging feature, see Avaya *Call Management System Software Installation, Maintenance, and Troubleshooting Guide.*

Chapter 12: Using Solaris

Chapter 13: Using timetables and shortcuts

This section provides information on timetables and shortcuts and how to create and administer them. Timetables and shortcuts are used to run multiple administrative tasks and are only available through the *CMS* ASCII interface.

Access to the CMS ASCII interface can be done through the following methods:

- Terminal Emulator
- Telnet session to the CMS
- Direct interaction with the CMS server console

This section contains the following topics:

- <u>Timetables</u> on page 407
- Shortcuts on page 430

Timetables

A timetable is a *CMS* feature that enables the scheduling of one or more administrative tasks. Each timetable can consist of up to 100 tasks and can be scheduled to run at any specific time. When you are creating a timetable, *CMS* records the tasks you perform and includes them in the timetable. This feature is similar to macros in many PC applications that perform multiple tasks or actions when the single macro is run.

Timetables are better suited for mission-critical tasks than *Supervisor* scripts. This is due to the fact that scripts reside on the PC where they were created. If network difficulties occur or if the PC where the script resides is powered down, the script cannot run. Timetables run directly on the *CMS* server and do not suffer from such problems.

This section contains the following topics:

- Before you begin on page 408
- <u>Permissions</u> on page 409
- <u>Creating and scheduling a timetable</u> on page 409
- Adding tasks to a timetable on page 413
- Listing all timetables on page 415
- Copying a timetable on page 416
- <u>Copying timetable tasks</u> on page 417

- <u>Modifying timetable tasks</u> on page 419
- Editing timetables globally on page 421
- <u>Globally editing tasks in a timetable</u> on page 423
- Deleting tasks from a timetable on page 426
- <u>Deleting a timetable</u> on page 428

Before you begin

The following items should be read and understood before working with timetables:

General

- You cannot schedule real-time reports, Vector Contents, or custom report creation through a timetable.
- Timetables run in the background, not in the terminal session.
- Timetables that fail at some point during execution are logged in the Maintenance Error Log Report.
- Up to five timetables can be scheduled to run at the same time.
- You can have tasks associated with different ACDs in the same timetable.
- Do not create a timetable that attempts to write a file in the home directory of different user.
- The ACD that is currently selected when a timetable task is created will be the ACD on which the task runs. To change the ACD, you must delete the task and reset the current ACD before adding the correct task.
- When a *CMS* user is deleted, any timetables associated with that user ID are also deleted. For this reason, it is recommended that mission-critical timetables be created under the cms user ID.
- If the System Administration Terminal (SAT) terminal is still logged in to the Communication Manager system and is displaying a screen used in timetables, those timetables will not run.
- Timetables cannot run if *CMS* is in single-user mode.

Printing

- You cannot select the terminal as the destination for report output through a timetable.
- To print a report more than once from a timetable, you must enter a task for each copy of the report.

- Print jobs from timetables go to the default printer for the user who owns the timetable unless otherwise specified when the timetable is created. If the default printer for a user is changed, there is no need to edit the timetable as *CMS* automatically sends the print jobs from the timetable to the new default printer.
- If a user specifies a printer other than their default printer for a timetable task and that printer is out of service, the timetable will not execute.
- If the printer jams while attempting to print timetable tasks, you must resubmit the request that did not print.

Backups

- Timetables for incremental and full backups are created when the system is installed, but are not scheduled.
- Be sure to schedule backups to run either before archiving begins or after archiving has been completed.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- To view timetables, the user ID used to log in to this *CMS* session requires *read* permission for the **Timetables** feature, the requested *CMS* actions, and any ACD entities accessed by the timetable.
- To add, delete, or modify timetables, the user ID used to log in to this *CMS* session requires *write* permission for the **Timetables** feature.
- Users who are not Administrators can view and copy timetables from other users, but they cannot add, delete, or modify the timetables or the task entries.
- Users with Administrator permissions can add, delete, and modify timetables created by other users.
- If a timetable contains tasks for which the user does not have adequate permissions, the timetable will fail.

Creating and scheduling a timetable

This topic provides the procedure for creating and scheduling a timetable through the *CMS* ASCII interface.

Steps

To create a timetable:

1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).

Depending on the connection method to the *CMS* interface, this action can be accomplished through the following methods:

- For Terminal Emulator, select the F4 key.
- From the CMS console, press the F4 key.
- For a telnet session from a PC, press Ctrl+P, 4.
- 2. Select Timetable and press the Enter key.

CMS displays the **Timetable** window.

Timetable	test1
Timetable name: Description:	Add Copy Delete Find one
User ID: <u>oms</u> Start time: Start date: Frequency and attributes (Select only one): <x> Once</x>	Get contents Global edit List all Modify Next
<_> Dates:	Previous
<pre><_> Hourly, Stop time: <u>11:59 PM</u> <_> Daily, Hourly/Daily Days (Select any you wish): [x] Sunday [x] Tuesday [x] Thursday [x] Monday [x] Wednesday [x] Friday This timetable will run on this or another CMS server* <_> Run only on this CMS server* <x>> Run on this or another CMS server*</x></pre>	
*These fields not used for Find one or List all	21x68

3. In the **Timetable name:** field, enter a unique name for this timetable. The name of the timetable cannot be changed after it has been created. Every timetable must have a unique name.

The following list provides the types of characters that can be entered in this field:

- Alphanumeric (A-z, 0-9)
- Underscore (_)
- Blank ()
- Comma (,)
- Period (.)
- Single Quotation Marks (')
- Plus sign (+)

4. In the **Description:** field, enter a description for the timetable.

This field is optional.

- 5. In the **User ID:** field, the user ID currently logged in is displayed. If you are an administrator and want to create this timetable for another user ID, enter that user ID in this field.
- 6. In the **Start time:** field, enter the time when the timetable will be executed. If you do not wish to schedule the timetable at this time, leave this field blank.

This field can accept time in the following formats:

- HH AM/PM
- HH:MM AM/PM
- 24-hour (00:00 23:59)

If AM/PM is not specified, CMS assumes that the time entered is in the 24-hour format.

7. In the **Start date:** field, enter the date on which the timetable will begin running.

Use one of the following formats for entering the date in this field:

- MM/DD/YY For example, 12/12/01. Do not enter four-digits years in this field.
- Relative format For example, entering a 1 specifies the timetable will begin one day from today (tomorrow).

A Important:

If you do not wish to schedule the time table at this point, leave the **Start time:** and **Start date:** fields blank, ensure an x is in the **Once** field, and skip ahead to Step 11.

- 8. In the **Frequency and attributes:** group, choose from the following options:
 - Once This option runs the timetable one time for the date and time specified in the Start time: and Start date: fields. This is the default value for this field group.
 - **Dates:** This option runs the timetable on specific dates. Enter the dates in the fields provided for this option.
 - **Hourly** This option runs the timetable each hour. In the **Stop time:** field, enter the time when the timetable should stop running.
 - **Daily** This option runs the timetable on the selected days in the **Hourly/Daily Days** group.
- 9. If the **Hourly** or **Daily** option was selected in the previous step, place an x next to the days in the **Hourly/Daily Days** group for which the timetable should run.
- 10. Place an x in one of the following options:
 - **Run only on this CMS server** The timetable will run only on this *CMS* server. If this timetable is backed up and migrated to another *CMS* server, it will not run.

- **Run on this or another CMS server** The timetable is capable of running on this or any other *CMS* server. If this timetable is backed up and migrated to another *CMS* server, it will function normally.
- 11. Press the **Enter** key, highlight the **Add** item on the action list by using the arrow keys on the keyboard, and press **Enter** again.

The window displays a **Working** message. If the timetable name is currently present, **already exists** displays on the status line and you must enter a different timetable name in the **Timetable name:** field. If all entries are valid, the **Main Menu** displays with **Keeping Entries** displayed in the border.

12. Select a task from the CMS Main Menu that will be recorded to this new timetable.

CMS displays an **Entries Stored** in the status line of the current window when the task is run.

To run an historical report for the system:

- a. Select **Reports** from the **Main Menu**.
- b. Select Historical.
- c. Select System.
- d. Select System.
- e. Select Daily.

CMS displays the report window.

13. Enter the required information in the **Split(s)/Skill(s)** and **Date** fields.

The **Date** field can accept relative dates; for example, 0 represents today and -1 represents yesterday.

14. Press the **Enter** key to access the action list, select the menu item that performs the necessary action, and then press the **Enter** key again.

CMS displays a confirmation window.

It is possible to create more than one timetable task from a window. For example, suppose you want historical split/skill summary interval reports for skills 1 through 9, and you also want the same date and times for each report. To create this report, perform the following steps:

- a. Go to the report window and enter the following data:
 - Enter 1 for the skill number.
 - Enter 0 for the date.
 - Enter 8:00-16:00 for the times.
- b. Select **Run** on the action list. This creates a timetable task for skill 1.
- c. Returning to the report input window, enter 2 for the skill number and select **Run** on the action list. This creates a timetable task for skill 2. Repeat the same process for skills 3 through 9.

- 15. Exit the window for the task and return to the Main Menu.
- 16. To add more tasks to the timetable, return to Step 12. Otherwise, open the **Keep** SLK menu and then select the **Stop** option.

CMS displays a confirmation window asking if the timetable should be saved.

17. When *CMS* displays the confirmation window, press the **Y** key for **Yes** and then the **Enter** key to save the task.

Note:

To exit the timetable at any time without saving your changes, select **Stop** from the **Keep** SLK menu and then enter n in the confirmation window.

18. Select the **Exit** SLK to close the **Timetable** window.

Adding tasks to a timetable

This topic provides the procedure for adding tasks to an existing timetable. This feature enables you to add tasks to a timetable in the same way you added tasks when you first created the timetable.

Steps

To add tasks to a timetable:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select Timetable and press the Enter key.

CMS displays the Timetable window.

Timetable	test1
	Add
Timetable name:	Copy
Description:	Delete
	Find one
User ID: <u>cms</u>	Get contents
Start time:	Global edit
Start date:	List all
Frequency and attributes (Select only one):	Modify
< <u>x</u> > Once	Next
<_> Dates:	Previous
	L
< > Hourly, Stop time: 11:59 PM	
< > Daily,	
Hourly/Daily Days (Select any you wish):	
[<u>x]</u> Sunday [<u>x</u>] Tuesday [<u>x</u>] Thursday	[x] Saturday
[x] Monday [x] Wednesday [x] Friday	
This timetable will run on this or another CMS serve	ər
<_> Run only on this CMS server*	
< <u>x</u> > Run on this or another CMS server*	
*These fields not used for Find one or List all	
	21x68

3. Press **Ctrl + Z**.

The fields in the window are cleared of all default information.

- 4. In the **Timetable name** field, enter the name of the timetable to which you want to add a task.
- 5. Press the **Enter** key.

CMS shifts focus to the action list.

In the action list, use the arrow keys to select Get contents and press the Enter key.
 CMS displays the Timetable: Get Contents window.

	ole: Get Co	ntents				test1
Task(s					Add tas	sks
	able: Sample			Number of tasks: 10	Сору	
Task A	action Wind				Delete	
				Summary: Interval Input	Global	edit
				Summary: Daily Input	Modify	
				Summary: Weekly Input		
				Summary: Monthly Input	test1	a510
				Split/Skill: Interval Input	test1	a510
				Split/Skill: Daily Input	test1	a510
7 R	un Rpts	: Hist:	Agent:	Split/Skill: Weekly Input	test1	a510 (
					103×1	132 >

7. In the **Task(s):** field, enter the number of the task that you want to precede the task being added.

If the task being added should appear as the fifth task, enter 4 in the Task(s): field.

To add a task to the beginning of the timetable, leave the **Task(s):** field blank. The new task is added before the first task.

To add tasks to a timetable with no tasks, leave the **Task(s):** field blank.

8. Press the **Enter** key.

CMS shifts focus to the action list.

9. Use the arrow keys to highlight the **Add tasks** item and press the **Enter** key.

CMS displays the **Main Menu** and is waiting for you to perform an action that it can add as a task. The status line of the **Main Menu** displays **Keeping Entries**.

10. Perform the task that you wish to have added to timetable. For more information on the steps necessary in adding a task to a timetable, see Step 12 in <u>Creating and scheduling a timetable</u> on page 409.

When the task is performed, CMS displays Entries Stored in the status line.

11. Exit the task window.

CMS displays the Main Menu.

At this point, more tasks can be added simply by performing them. These tasks will be added to the timetable in order following the previous task.

12. If you finished adding tasks to the timetable, open the **Keep** SLK menu and then select the **Stop** option.

CMS displays a confirmation window asking if the timetable should be saved.

13. Press the **Y** key for **Yes** and then the **Enter** key.

CMS saves the timetable with the newly added tasks and displays the **Timetable: Get Contents** window.

Listing all timetables

This topic provides the procedure for listing all timetables that currently exist in the *CMS* database. Listing all timetables can assist in finding specific timetables when you cannot remember the entire name of a timetable. It is also useful in helping to determine if too many timetables are scheduled to run at the same time.

Steps

To list all timetables:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. On the Keep SLK menu, select Timetable.

CMS displays the Timetable window.

3. Press **Ctrl + Z**.

CMS clears the default information from all fields in the Timetable window.

4. Press the Enter key.

CMS shifts focus to the action list.

5. Using the arrow keys, move the cursor to the **List all** menu item and press the **Enter** key. *CMS* displays the **Timetable: List All** window listing all timetables.

				6 1
				Start
Timetable Name	User ID	<u>Status</u>	Next Run	Time
skh11.20.2	cms	finished		1:30 PI
temp7	Cms			
temp9	cms	finished		1:30 PI
tst	cms			

Use the right- and left-arrow keys to scroll to the other fields in this window.

The following list describes the entries that can appear in the Status field.

- **Finished** This message indicates that the timetable was scheduled to run once and it completed successfully.
- **Failed** This message indicates that the timetable failed to run successfully for the last scheduled run time.
- Successful This message indicates that the timetable completed successfully.

- **Unscheduled** This message indicates that the timetable does not have a start time or start date.
- Running This message indicates that the timetable is currently running.

Copying a timetable

This topic provides the procedure for copying an existing timetable to a new timetable. Although you can copy timetables from other users, you cannot copy over an existing timetable. When you copy a timetable, the scheduling information and tasks in the timetable are copied. The name of the timetable that will be copied should be known before starting this procedure.

Steps

To copy a timetable:

1. Select **Timetable** on the **Keep** Screen-Labeled Key (SLK) menu.

CMS displays the Timetable window.

Timetable	test1
	Add
Timetable name:	Сору
Description:	Delete
	Find one
User ID: cms	Get contents
Start time:	Global edit
Start date:	List all
Frequency and attributes (Select only one):	Modify
< <u>x</u> > Once	Next
<_> Dates:	Previous
<_> Hourly, Stop time: <u>11:59 PM</u>	
<_> Daily,	
Hourly/Daily Days (Select any you wish):	
[<u>x]</u> Sunday [<u>x]</u> Tuesday [<u>x]</u> Thursday	[<u>x</u>] Saturday
[<u>x]</u> Monday [<u>x]</u> Wednesday [<u>x</u>] Friday	
This timetable will run on this or another CMS serve	er
<_> Run only on this CMS server*	
$< \underline{\mathbf{x}} >$ Run on this or another CMS server*	
*These fields not used for Find one or List all	
	21x68

2. In the **Timetable name:** field, enter the name that will be used for the new timetable.

The following list provides the types of characters that can be entered in this field:

- Alphanumeric (A-z, 0-9)
- Underscore (_)
- Blank ()
- Comma (,)
- Period (.)
- Single Quotation Marks (')

- Plus sign (+)
- 3. In the **User ID:** field, confirm that your user ID is present.
- 4. Press the **Enter** key.

CMS shifts focus to the action list.

Use the arrow keys to highlight the Copy item in the action list and press the Enter key.
 CMS displays the Timetable: Copy window.

Timetable: Copy	test1
Copy from: ∎ User ID:	Сору

- 6. In the Copy from: field, enter the name of the timetable to copy.
- 7. In the **User ID** field, enter the user ID that is currently associated with the existing timetable.
- 8. Press the Enter key.

CMS shifts focus to the action list of the Timetable: Copy window.

9. Press the Enter key again.

CMS displays **Successful** in the status bar.

If this new timetable is not scheduled to run, *CMS* displays a message notifying you that this copy needs to be rescheduled.

10. Select the **Exit** SLK to close the **Timetable** window.

Copying timetable tasks

This topic provides the procedure for duplicating tasks within a timetable.

Before you begin

The following items should be read and understood before copying timetable tasks:

- Only the owner of the timetable or an administrator can copy timetable tasks.
- You cannot copy a task more than once using the **Copy** command in the **Get Contents** window. You must reuse the **Copy** command to make additional copies of a task.
- You cannot copy more than 100 tasks into a timetable. If you exceed the limit, none of the tasks are copied. The status line will display a **Failed** message when this occurs.
- Copies of tasks can be placed after a specified task in the timetable, or each copy can be placed directly after the task from which it was copied. The default is to place the copies after the last task in the timetable.

Steps

To copy a timetable task:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Timetable** and press the **Enter** key.

CMS displays the **Timetable** window.

Timetable	test1
	Add
Timetable name:	Сору
Description:	Delete
	Find one
User ID: <u>cms</u>	Get contents
Start time:	Global edit
Start date:	List all

	21x68

3. Press **Ctrl + Z**.

The fields in the window are cleared of all default information.

- 4. In the **Timetable name:** field, enter the name of the timetable containing the task to copy.
- 5. In the **User ID:** field, enter the user ID that created the timetable.

If you are not the owner or an administrator, you will not be able to copy tasks in the timetable.

6. Press the **Enter** key.

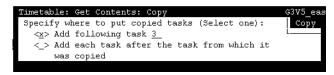

CMS shifts focus to the action list.

Use the arrow keys to highlight the Get contents menu item and press the Enter key.
 CMS displays the Timetable: Get Contents window.

Timet	able: •	Get Con	tents				test1

						103×	132 >

8. In the **Task(s):** field, enter the task number to copy and press the **Enter** key. *CMS* shifts focus to the action list of the **Timetable: Get Contents** window.

9. Using the arrow keys, highlight the **Copy** menu item, and press the **Enter** key. *CMS* displays the **Timetable: Get Contents: Copy** window.

- 10. Choose one of the following options by placing an x next to it:
 - Add following task The copied task will be placed immediately after the task specified in this field.
 - Add each task after the task from which it was copied The copied task is placed immediately after itself.

The default action is to place the copied task at the end of the list.

11. Press the **Enter** key.

CMS shifts focus to the action list.

12. Press the Enter key again.

CMS displays **Working** in the status line. When the operation completes, the status line displays **Successful**. *CMS* closes the **Copy** window and displays the **Get Contents** window.

If the operation fails, a message window appears stating the reason for the failure.

13. To close the Get Contents window, select the Exit SLK.

Modifying timetable tasks

This topic provides the procedure for modifying tasks within a timetable. The **Modify** feature allows you to modify the action or data associated with any task within the selected timetable.

Before you begin

The following items should be read and understood before modifying timetable tasks:

- Only the owner or an administrator can modify timetable tasks.
- The **Current** and **Main Menu** Screen-Labeled Keys (SLKs) are blocked while modifying tasks.
- If you press the **Exit** SLK without selecting a task action, a popup window is displayed stating that the task modification has been cancelled.
- To exit the timetable without saving any changes, select the Stop item from the Keep SLK menu.

Steps

To change a timetable task:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Timetable** and press the **Enter** key.

CMS displays the **Timetable** window.

Timetable	test1
	Add
Timetable name:	Сору

				- Č		102×1	22 5

- In the Task(s): field, enter the number of the task to modify and press the Enter key.
 CMS shifts focus to the action list of the Get Contents window.
- Using the arrow keys, highlight the Modify menu item and press the Enter key. CMS displays a window for the specified task. Example:

- 10. Make any necessary changes to the task.
- 11. When the changes have been made, press the **Enter** key.

CMS shifts focus to the action list.

12. Using the arrow keys, highlight the appropriate action to perform in the action list and press the **Enter** key.

CMS displays a confirmation window asking if changes should be saved.

13. To save the changes made to the task, press the **Y** key for 'Yes' and then press the **Enter** key.

CMS saves the task changes to the timetable and displays the Get Contents window.

14. To exit the Get Contents window, select the Exit SLK.

Editing timetables globally

Globally editing timetables changes the server compatibility for all timetables associated with a user ID.

Server compatibility of timetables can be one of the two following states:

- **Run only on this CMS server** The timetable will run only on this *CMS* server. If this timetable is backed up and migrated to another *CMS* server, it will not run.
- Run on this or another CMS server The timetable is capable of running on this or any other CMS server. If this timetable is backed up and migrated to another CMS server, it will function normally.

Before you begin

The following items should be read and understood before making global edits to timetable tasks:

• Only the owner of the timetable or an administrator can globally edit a timetable.

• If an error is made during a global edit, *CMS* displays an error message describing the nature of the problem. All errors must be corrected before *CMS* allows you to complete the modifications.

Steps

To edit a timetable globally:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Timetable** and press the **Enter** key.

CMS displays the Timetable window.

Timetable	testi
	Add
Timetable name:	Сору

<_> Hourly, Stop time: <u>11:59 PM</u>	
<_> Daily,	
Hourly/Daily Days (Select any you wish):	
[x] Sunday [x] Tuesday [x] Thursday	[<u>x</u>] Saturday
[<u>x]</u> Monday [<u>x</u>] Wednesday [<u>x</u>] Friday	
This timetable will run on this or another CMS serve	er
<_> Run only on this CMS server*	
$\langle \underline{x} \rangle$ Run on this or another CMS server*	
*These fields not used for Find one or List all	
	21x68

3. Press Ctrl + Z.

The fields in the window are cleared of all default information.

- 4. In the **Timetable name:** field, enter the name of the timetable containing the tasks to modify globally.
- 5. Press the **Enter** key.

CMS shifts focus to the action list.

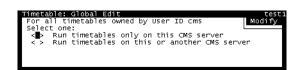

6. Using the arrow keys, highlight Find one and press the Enter key.

CMS locates the timetable and populates the remaining fields with the information from the timetable.

7. Press the **Enter** key.

CMS shifts focus to the action list.

Using the arrow keys, highlight Global edit and press the Enter key.
 CMS displays the Timetable: Global Edit window.

- 9. Select one of the following options by placing an \mathbf{x} in the associated field:
 - **Run timetables only on this CMS server** All timetables owned by the specified user ID will be modified so that they can only run on this *CMS* server. Timetables migrated to another server will not function.
 - Run timetables on this or another CMS server All timetables owned by the specified user ID will be modified so that they can run on the current CMS server or, if migrated, a different CMS server.
- 10. Press the **Enter** key.

CMS shifts focus to the action list and highlights the Modify action.

11. Press the Enter key again.

CMS will display a message in the status line of this window indicating how many timetables were updated.

12. Use the **Exit** SLK to close this window and return to the **Timetable** window.

The timetable displayed in the **Timetable** window does not update automatically. Use the **Find one** action to re-query for this table in order to show the current configuration.

Globally editing tasks in a timetable

This topic provides the procedure for changing multiple tasks in a timetable to use a common date, time, or printer destination. For example, you may want to run all reports within a timetable so that instead of reporting on data for today (relative date: 0), the reports will use data from yesterday (relative date: -1). Using the global edit feature can change the dates used for these reports in a simple series of steps instead of modifying each task separately. This feature can also be used to modify tasks that have different values for times, dates, or printer destinations so that all specified tasks use consistent values.

Before you begin

The following items should be read and understood before making global edits to timetable tasks:

• Only the owner of the timetable or an administrator can globally edit a timetable.

• If an error is made during a global edit, *CMS* displays an error message describing the nature of the problem. All errors must be corrected before *CMS* allows you to complete the modifications.

Steps

To edit multiple tasks within a timetable:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Timetable** and press the **Enter** key.

CMS displays the Timetable window.

							132 >

- 9. In the **Task(s):** field, enter the tasks to modify using the following methods:
 - Range For example, 1-50.
 - Separate values For example, 1; 3; 6; 7.
 - Combination For example, 1; 3-7; 10.
- 10. After the tasks to globally edit have been specified, press the **Enter** key. *CMS* shifts focus to the action list.
- 11. Using the arrow keys, highlight **Global edit** and press the **Enter** key.

CMS displays the Timetable: Get contents: Global edit window.

Timetable: Get Contents: Global Edit	test 1
Field to change (Select one):	Confirm
< <u>x</u> > Date/Dates	Modify
<_> Times	L
<_> Printer	

- 12. Place an \mathbf{x} in the field that will be changed for all specified tasks.
- 13. In the field to the right of the selected option, enter one or more values as necessary.

To have multiple reports retrieve contact center data that occurred at 2:00 PM, place an x in the **Times** option and enter 2:00 PM or 14:00 in the associated field to the right.

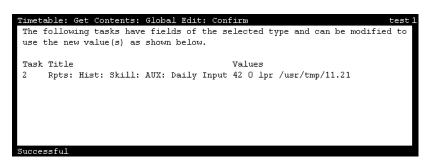

For the **Date/Dates** option, enter dates in either MM/DD/YY format or the relative format based on today (0 for today, -1 for yesterday). You can separate individual data entry items with semicolons (;) and value ranges with hyphens (-) between entries.

14. Press the **Enter** key.

CMS shifts focus to the action list.

15. Using the arrow keys, highlight **Confirm** and press the **Enter** key.

CMS displays the Timetable: Get Contents: Global Edit: Confirm window.

This window is used to confirm the tasks that will be modified. No changes have been made at this point. If some specified tasks do not appear in the confirmation window, it is because those tasks do not use the data specified when they are run. For example, some reports only use a date value to retrieve information; therefore, changing the time value will not modify this task. If the tasks listed in this window are not correct, you can go back to the previous windows and make adjustments as necessary.

16. Select the Exit SLK.

CMS closes the Timetable: Get Contents: Global Edit: Confirm window.

17. If you are satisfied with the changes, press the Enter key.

CMS shifts focus to the action list.

18. Using the arrow keys, highlight **Modify** and press the **Enter** key.

CMS modifies the tasks in this timetable with the data values specified, closes the **Timetable: Get Contents: Global Edit** window, and displays **Successful** in the status line when the operation is complete.

19. Close the Timetable: Get Contents by selecting the Exit SLK.

Deleting tasks from a timetable

This topic provides the procedure for deleting individual tasks from a timetable.

Before you begin

The following items should be read and understood before deleting tasks from a timetable:

- Only the owner of the timetable or an administrator can delete tasks from a timetable.
- To exit the timetable without saving any changes, select the **Stop** item from the **Keep** SLK menu.

Steps

To delete a task from a timetable:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Timetable** and press the **Enter** key.

CMS displays the **Timetable** window.

Timetable	test1
_	Add
Timetable name:	Сору
Description:	Delete
	Find one
User ID: <u>cms</u>	Get contents
Start time:	Global edit
Start date:	List all

3. Press **Ctrl + Z**.

The fields in the window are cleared of all default information.

- 4. In the **Timetable name:** field, enter the name of the timetable containing the tasks to modify globally.
- 5. Press the Enter key.

CMS shifts focus to the action list.

6. Using the arrow keys, highlight **Find one** and press the **Enter** key.

CMS locates the timetable and populates the remaining fields with the information from the timetable.

7. Press the Enter key.

CMS shifts focus to the action list.

8. Using the arrow keys, highlight **Get contents** and press the **Enter** key.

CMS displays the **Timetable: Get Contents** window.

Timet	able: •	Get Cont	tents						test

3. Press **Ctrl + Z**.

The fields in the window are cleared of all default information.

- 4. In the **Timetable name:** field, enter the name of the timetable containing the tasks to modify globally.
- 5. Press the **Enter** key.

CMS shifts focus to the action list.

6. Using the arrow keys, highlight Find one and press the Enter key.

CMS locates the timetable and populates the remaining fields with the information from the timetable.

7. Press the **Enter** key.

CMS shifts focus to the action list.

8. Using the arrow keys, highlight **Delete** and press the **Enter** key.

CMS displays a confirmation window.

9. Press the **Y** key for 'Yes' and then the **Enter** key.

CMS deletes the timetable and a successful message is displayed in the status line.

Shortcuts

A shortcut is similar to a timetable except that it is not run based on time but rather when it is executed by a user. A shortcut is a fast and easy way for an ASCII terminal user to select windows that are used often. For example, you can create a shortcut for two different real-time reports that you normally view throughout the day. The shortcut displays these reports, fills out the input windows, and places them on the terminal screen so that they can both be viewed at once. Although useful for other tasks, shortcuts are most commonly used to run real-time reports.

This section contains the following topics:

- Before you begin on page 430
- Permissions on page 431
- Creating a shortcut on page 431
- Adding tasks to a shortcut on page 433
- Running a shortcut on page 434
- Modifying a shortcut description on page 435
- Copying a shortcut on page 436
- Copying shortcut tasks on page 437
- Modifying shortcut tasks on page 439
- Deleting shortcut tasks on page 440
- Deleting a shortcut on page 441

Before you begin

The following items should be read and understood before working with shortcuts:

- Shortcuts are only available through the ASCII interface to CMS.
- Each user can create a maximum of ten shortcuts.
- Once a shortcut has started running, it cannot be stopped.
- Shortcuts can be copied from those created by other users.
- You cannot exceed your maximum allowable window count by using a shortcut.
- You cannot create a custom report using a shortcut.
- When using the **Keep** mode to record the tasks for a shortcut, the **Current** Screen-Labeled Key (SLK) will only shift focus between windows in the shortcut window. It will not shift focus to windows that were open before you entered **Keep** mode.

- When you create a shortcut, tasks that have errors in them are saved, but they will not
 execute when the shortcut is run. The task containing the error will display an error
 message which causes the shortcut to stop. The error must be corrected before the
 shortcut can run properly. To delete the error, exit the shortcut without saving changes or
 edit the shortcut if the error has already been saved.
- Deleting a CMS user who owns shortcuts results in those shortcuts also being deleted.

Permissions

Depending on the procedure that you want to perform, you need the following permissions:

- All users are allowed to create shortcuts.
- You must have *read* and *write* permissions for any *CMS* subsystems and ACD entities associated with the tasks included in a shortcut.
- Users without the *Administrator* permission can view and copy the shortcuts of other users, but they cannot add, modify, or delete those shortcuts.
- If the access permissions for a user are changed, it could cause the shortcuts of that user to not run properly. For example, removing skill permissions for a user can result in a shortcut report not running or displaying data for that skill.

Creating a shortcut

This topic provides the procedure for creating a shortcut and adding tasks for it to perform.

Steps

To create a shortcut:

1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).

2. Select **Shortcut** and press the **Enter** key.

CMS displays the Shortcut window.

Shortcut name: Add Description: Delete User ID: Copy Delete Find one Get contents List all Modify Modify	Shortcut	test 1
Next Previous	Description:	Copy Delete Find one Get contents List all Modify Next

The **User ID**: field shows the ID of the user who ran this command. Unless you have *Administrator* permissions, you will not be able to create a shortcut for another user.

3. In the Shortcut name: field, enter a unique name for this shortcut.

Keep the name for the shortcut simple as it becomes the name that must be entered when you wish to execute it from the *CMS* **Main Menu**.

4. In the **Description:** field, enter a brief description for the shortcut.

This field is optional.

5. Press the **Enter** key.

CMS shifts focus to the action list.

6. Highlight the **Add** item and press the **Enter** key.

CMS displays the Main Menu. CMS is now in Keep mode.

- 7. Use the **Main Menu** to select tasks. Multiple windows can be shown on the screen at one time.
- 8. Use the **Move** and **Size** items from the **Window** SLK menu to adjust the placement and dimensions of each window.
- 9. When satisfied with the report windows, input windows, and their placement and sizes on the screen, select the **Stop** item from the **Keep** SLK menu.

CMS displays a confirmation window asking if the shortcut should be saved.

10. Press the **Y** key for 'Yes' and then **Enter** to save the shortcut.

CMS displays the **Shortcut** window again and the status line displays a **Successful** message indicated that the shortcut was saved.

11. Select the Exit SLK to close the Shortcut window and return to the Main Menu.

Adding tasks to a shortcut

This topic provides the procedure for adding tasks to an existing shortcut.

Steps

To add tasks to a shortcut:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Shortcut** and press the **Enter** key.

CMS displays the Shortcut window.

Shortcut	test
	Add
Shortcut name:	Copy
Description:	Delete
	Find one
User ID: cms	Get contents
	List all
	Modify
	Next
	Previous

- 3. In the **Shortcut name:** field, enter the name of the shortcut which will have new tasks added.
- 4. Press the **Enter** key.

CMS shifts focus to the action list.

5. Highlight Get contents and press the Enter key.

CMS displays the Shortcut: Get Contents window.

Shortcut: Task(s):	Get Contents	G3V6_eas Add tasks
	Shortcut8 Number of tasks: 2 on Window Title C	Copy Delete
1 Run 2 Run	Rpts: Real: Split/Skill: Skill Top Agent Report In g Rpts: Hist: Agent: AUX: Interval Input g	Modify
Successful		5x132 >

In the Task(s): field, enter the number of the task that the new task will follow.
 To add a task in the second position of the shortcut, enter 1 in the Task(s): field.
 If you wish the new task to be in the first position, leave the Task(s): field blank.

7. Press the **Enter** key.

CMS shifts focus to the action list.

8. Highlight **Add tasks** and press the **Enter** key.

CMS displays the Main Menu.

9. On the **Main Menu**, use the normal menu items to perform the tasks you want to add to the shortcut.

When you have made and validated each action list selection, **Entries Stored** displays on the status line.

10. When you have finished performing tasks for the shortcut, select **Stop** from the **Keep** SLK menu.

CMS displays a confirmation asking if the changes should be saved.

11. Press the **Y** key for 'Yes' and then the **Enter** key.

CMS saves the tasks and displays the Shortcut: Get Contents window.

12. Select the Exit SLK to close the Shortcut: Get Contents window.

Running a shortcut

This topic provides the procedure for executing a shortcut.

Steps

To run a shortcut:

1. At the CMS Main Menu, press the; (semicolon) key.

CMS selects the command line of the Main Menu.

ainMenu	
Reports> Dictionary>	
Exceptions>	
Agent Administration>	
Call Center Administration>	
Custom Reports>	
User Permissions>	
System Setup>	
Maintenance>	
Loqout	
;■	

2. Enter the name of the shortcut to run and press the Enter key.

The shortcut starts running and locks the keyboard until the shortcut finishes. When the shortcut finishes, the status line displays a **Successful** message.

Modifying a shortcut description

This topic provides the procedure for editing the name or description of a shortcut.

Steps

To edit a shortcut:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Shortcut** and press the **Enter** key.

CMS displays the **Shortcut** window.

Shortcut	test 1
	Add
Shortcut name:	Сору
Description:	Delete
	Find one
User ID: <u>cms</u>	Get contents
	List all
	Modify
	Next
	Previous

- 3. In the Shortcut name: field, enter the name of the shortcut to modify.
- 4. Press the **Enter** key.

CMS shifts focus to the action list.

5. Highlight Find one and press the Enter key.

CMS retrieves the shortcut and populates the **Description:** and **User ID:** fields with information from the shortcut.

- 6. Make the necessary change to the **Description:** field.
- 7. Press the **Enter** key.

CMS shifts focus to the action list.

8. Highlight Modify and press the Enter key.

CMS saves the changes to the shortcut displays a **Successful** message in the status line.

9. Select the Exit SLK to close the Shortcut window.

Copying a shortcut

This topic provides the procedure for copying an existing shortcut into a new shortcut. All users can copy shortcuts owned by other users. However, no shortcuts owned by your user ID, even as an *Administrator*, can be copied by you to another user. It is not possible to copy a shortcut over an existing shortcut.

Steps

To copy a shortcut:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Shortcut** and press the **Enter** key.

CMS displays the **Shortcut** window.

	Add
Shortcut name:	Сору
Description:	Delete
	Find one
User ID: <u>cms</u>	Get contents
	List all
	Modify
	Next
	Previous

- 3. In the Shortcut name: field, enter the name of the new shortcut that will be created.
- 4. In the **Description:** field, enter a brief phrase identifying the new shortcut. This field is optional.
- 5. In the **User ID:** field, ensure your user ID is present.
- 6. Press the **Enter** key.

CMS shifts focus to the action list.

7. Highlight **Copy** and press the **Enter** key.

CMS displays the Shortcut: Copy window.

Shortcut: Copy	test1
Copy from: ∎ User ID:	Сору

- 8. In the Copy from: field, enter the name of the shortcut to copy as the new shortcut.
- 9. In the User ID: field, enter the ID of the user that owns the shortcut to copy.

10. Press the Enter key.

CMS shifts focus to the action list.

11. Press the Enter key again.

CMS creates the new shortcut, closes the **Shortcut: Copy** window, and displays a **Successful** message in the status line.

12. Select the Exit SLK to close the Shortcut window.

Copying shortcut tasks

This topic provides the procedure for copying tasks within a shortcut.

Steps

To copy a shortcut task:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select Shortcut and press the Enter key.

CMS displays the **Shortcut** window.

Shortcut	test 1
	Add
Shortcut name:	Сору
Description:	Delete
	Find one
User ID: cms	Get contents
	List all
	Modify
	Next
	Previous

- 3. In the **Shortcut name:** field, enter the name of the shortcut in which a task will be copied.
- 4. Press the **Enter** key.

CMS shifts focus to the action list.

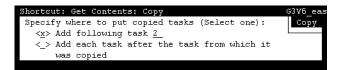

5. Highlight **Get contents** and press the **Enter** key.

CMS displays the Shortcut: Get contents window.

Task(s):				Add tasks
Shortcut:	Shortcut8	Number of tasks: 2		Сору
Task Actio	on Window Titl	e	С	Delete
1 Run	Rpts: Real:	Split/Skill: Skill Top Agent Report	t In g	Modify
2 Run	Rpts: Hist:	Agent: AUX: Interval Input	gl	

- In the Task(s): field, enter the number of the task to copy and press the Enter key.
 CMS shifts focus to the action list.
- 7. Highlight **Copy** and press the **Enter** key.

CMS displays the Shortcut: Get Contents: Copy window.

- 8. Place an \mathbf{x} in one of the following options:
 - Add following task This option will create the task after the task number specified in the field to the right.
 - Add each task after the task from which it was copied This option will create the task and place it immediately following the original task. If you specified to make a copy of task #1, the copy will be created as task #2. Any other tasks are shifted to a higher number to accommodate this action.
- 9. Press the **Enter** key.

CMS shifts focus to the action list.

10. Press the Enter key again.

CMS copies the original task, creates the new task, closes the **Shortcut: Get Contents: Copy** window, and displays a **Successful** message in the status line.

If any sort of error occurs, the status line will display **Failed** and *CMS* displays an error message describing the nature of the error.

11. Select the **Exit** SLK to close the **Shortcut: Get Contents** window.

Modifying shortcut tasks

This topic provides the procedure for editing tasks within a shortcut.

Steps

To modify a shortcut task:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Shortcut** and press the **Enter** key.

CMS displays the Shortcut window.

Shortcut	test
Shortcut name:	Add
	Copy

	Find one
User ID: <u>cms</u>	Get contents
	List all
	Modify
	Next
	Previous

- 3. In the **Shortcut name:** field, enter the name of the shortcut where tasks will be modified.
- 4. Press the **Enter** key.

CMS shifts focus to the action list.

5. Highlight **Get contents** and press the **Enter** key.

CMS displays the Shortcut: Get Contents window.

Task(s):	Shortcut8	Number of tasks: 2		Add tasks
				Copy
Task Acti	on Window Titl	-	C	Delete
1 Run	Rpts: Real:	Split/Skill: Skill Top Agent Report	In g	Modify
2 Run	Rpts: Hist:	Agent: AUX: Interval Input	gl	

- 6. In the **Task(s):** field, enter the number of the task to modify and press the **Enter** key. *CMS* shifts focus to the action list.
- 7. Highlight **Modify** and press the **Enter** key.

CMS displays the input window of the specified task.

- 8. Change the input parameters of the window as necessary. For example, this might include changing the split, agent, or another entity on which a report is based. This can also include making changes to the size and position of the task window.
- When the appropriate information has been entered, press the Enter key.
 CMS shifts focus to the action list.
- 10. Highlight **Modify** and press the **Enter** key.

CMS displays a confirmation asking if the changes should be saved.

11. Press the Y key for 'Yes' and then the Enter key.

CMS saves the changes to the task, closes the task window, and displays a **Successful** message in the status line.

12. Select the **Exit** SLK to close the **Shortcut: Get Contents** window.

Deleting shortcut tasks

This topic provides the procedure for deleting a task from a shortcut.

Steps

To delete a shortcut task:

- 1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).
- 2. Select **Shortcut** and press the **Enter** key.

CMS displays the Shortcut window.

Shortcut	test 1
	Add
Shortcut name:	Copy

	Find one
User ID: <u>cms</u>	Get contents
	List all
	Modify
	Next
	Previous

- 3. In the **Shortcut name:** field, enter the name of the shortcut containing the task to delete.
- 4. Press the Enter key.

CMS shifts focus to the action list.

5. Highlight **Get contents** and press the **Enter** key.

CMS displays the Shortcut: Get Contents window.

Task (s) :				Add tasks
Shortcut:	Shortcut8	Number of tasks: 2		Сору
Task Actic	n Window Titl	e	С	Delete
1 Run	Rpts: Real:	Split/Skill: Skill Top Agent Rep	ort In g	Modify
2 Run	Rpts: Hist:	Agent: AUX: Interval Input	g	

- 6. In the **Task(s):** field, enter the number of the task to delete.
- 7. Press the Enter key.

CMS shifts focus to the action list.

8. Highlight **Delete** and press the **Enter** key.

CMS displays a confirmation window asking if the changes to the shortcut should be saved.

9. Press the **Y** key for 'Yes' and then the **Enter** key.

CMS deletes the specified tasks and displays the Shortcut: Get Contents window.

10. Select the Exit SLK to close the Shortcut: Get Contents window.

Deleting a shortcut

This topic provides the procedure for deleting a shortcut from the CMS server.

Steps

To delete a shortcut:

1. From the CMS Main Menu, select the Keep Screen-Labeled Key (SLK).

2. Select **Shortcut** and press the **Enter** key.

CMS displays the Shortcut window.

- 3. In the **Shortcut name:** field, enter the name of the shortcut to delete. Shortcuts owned by other users cannot be deleted.
- 4. Press the **Enter** key.

CMS shifts focus to the action list.

5. Highlight **Find one** and press the **Enter** key.

CMS retrieves the information for the specified shortcut. If the shortcut with the name specified cannot be found, this will be indicated on the status line.

6. Verify that this is the shortcut to be deleted and press the **Enter** key.

CMS shifts focus to the action list.

7. Highlight **Delete** and press the **Enter** key.

CMS displays a confirmation window.

8. Press the **Y** key for 'Yes' and then the **Enter** key.

CMS deletes the specified shortcut and displays a Successful message in the status line.

Glossary

abandoned call	A call on which a caller hangs up before an agent answers.
abandoned call search	An ACD capability that enables the system to verify that the caller is still on the line before passing the call to an agent.
acceptable service level	1) A target value for the acceptable amount of time before an agent answers a call.
	 A percentage of calls answered within a set amount of time (for example, 80% of calls answered within 20 seconds).
access permissions	Permissions assigned to a <i>CMS</i> user so that the user can access different <i>CMS</i> capabilities or administer specific elements such as splits/skills, trunks, or vectors. Access permissions can be read, write, or exceptions. See also <u>read</u> <u>permission</u> , <u>write permission</u> .
ACD	See Automatic Call Distribution (ACD)
ACD call	1) A call that queues to a split/skill and is answered by an agent in that split/ skill.
	2) A call that queues as a direct agent call and is answered by the agent for whom it was queued.
Action List	A menu in the upper right-hand corner of most <i>CMS</i> ASCII screens. The menu lists the actions available for that particular window.
active VDN calls	A Call Vectoring feature on Communication Manager systems that provides conditional branching to a different step in the same vector or to a different vector, based on the number of incoming trunk calls a VDN is processing in a vector or at an agent position. Also called <i>counted calls to VDN</i> .
ACW	See after call work (ACW)
Adjunct/Switch Applications Interface (ASAI)	A recommendation for interfacing adjuncts and communications systems that is based on the CCITT Q.932 specification for layer 3. ASAI supports activities such as event notification and call control.
after call work (ACW)	An agent state consisting of work related to the preceding ACD call. If an agent hangs up after an ACD call, the agent is in ACW. ACW is also accessible by a button on the agent's set and does not have to be related to an ACD call.
agent	A person or VRU port that answers calls to an ACD split/skill. The agent is represented to <i>CMS</i> by a login identification keyed into a voice terminal.
agent login ID	A 1- to 9-digit number keyed by an ACD agent from a voice terminal to activate the agent position. Agent logins are needed for all <i>CMS</i> -measured ACD agents.
agent occupancy	The percentage of time that you expect or target for each split/skill agent to spend on ACD calls and in ACD while logged in.

agent position (EAS)	The combination of the agent login ID and the skills the agent is assigned. Data is collected for the agent by skill so that the total work for the agent is the sum of all skills in which the agent worked.
agent position (non-EAS)	The combination of the agent login ID and the split the agent logged into. Agents logged into multiple splits are associated with multiple positions. Call data is collected separately for each agent/split combination.
agent role	A description of the kind of service an agent in multiple skills give for one of these skills. Agent role is a combination of call-handling preference and skill/ reserve levels.
agent skill	An attribute that is associated with an ACD agent and that qualifies the agent to handle calls requiring the attribute. An agent can be assigned up to 60 skills; for example, the ability to speak a particular language or the expertise to handle a certain product.
	See also primary skill, secondary skill, and skill level
agent state	A feature of agent call handling that allows agents to change their availability to the switch; for example, ACW, AVAIL, AUX.
agent terminal	The voice terminal used by a contact center agent.
agent trace	A CMS capability that allows you to trace agent activities such as state changes which can then be shown in a report.
AI	See <u>Auto-in (AI)</u> .
ANI	See Automatic Number Identification (ANI).
announcement	A recorded voice message that typically identifies the call's destination, asks the caller to stay on the line, and describes the product or service offered. With the Call Vectoring feature, announcements can be part of a vector's call processing.
ASA	See Average Speed of Answer (ASA).
ASAI	See Adjunct/Switch Applications Interface (ASAI).
auto-available split	An ACD capability that enables VRUs such as the <i>CONVERSANT</i> ® Voice Information System to be brought online again immediately after a power failure or system restart without time-consuming reprogramming.
Auto-in (Al)	An ACD work mode that makes the agent available to receive calls and allows the agent to receive a new ACD call immediately after disconnecting from the previous call.
Automatic Call Distribution (ACD)	1) A switch feature that channels high-volume incoming and outgoing call traffic to agent groups (splits or skills).
	2) An agent state in which the extension is engaged on an ACD call.
Automatic Number Identification (ANI)	An industry term for notification of the calling party number (CPN). When the calling party is connected through a switch, the CPN can be either a billing number for the switch or the station identification (SID) number.
AUX	See auxiliary work (AUX).

- AUX reason codes Codes that enable a contact center to track an agent's time more precisely when the agent is in the AUX state. Agents can specify why they are in the AUX state for example, on break or in a meeting.
- **auxiliary work (AUX)** An agent state in which the agent is doing non-ACD work, is on break, or is in a meeting. Agent enter AUX work by pressing the AUX WORK button or dialing the access code from their voice terminal. Agents can also enter AUX work by going off-hook to make or answer an extension call while in AVAIL mode or with a call on hold.
- AVAIL See available (AVAIL).
- available (AVAIL) An agent work mode in which the extension can accept an ACD call. The agent enters this state by selecting the AI (auto-in) or MI (manual-in) work mode.
- average agentThe average time you are expecting or targeting each agent to spend on anservice timeACD call including talk time and ACW time.
- Avaya BusinessA set of features designed to enhance call and agent selection in a contactAdvocatecenter.
- Avaya Interactive
ResponseA powerful voice-response system that may include automated call routing,
announcement storage, message retrieval, and callback. Used to be called
CONVERSANT.
- Average Speed of Answer (ASA) The average time a caller waits in queue before connecting to an agent. The ASA for a split/skill includes the time spent in queue and the time ringing an agent. The ASA for a VDN includes the time spent in vector processing including the time spent in queue and the time ringing for the VDN that the call was answered in.
- **backup** The process of protecting data by writing the contents of the disk to an archive, such as tape, that can be removed from the computer environment and stored safely.
- calculationA formula for representing contact center entities in the Dictionary. Calculations
generate the date for fields in a report.
- **call-based items** The category of database items in *CMS* that are entered in the database after a call completes. If a call starts and ends in different intrahour intervals, the call-based data is recorded for the interval in which the call completed. Most database items are call-based.
- call-handlingA parameter of agent administration in an EAS environment that specifies howperformancecalls are selected for the agent.
- **call-handling profile** A set of objectives describing how a split/skill handles calls. Call-handling profiles are part of the *Avaya CMS Forecast* product.
- **Call Prompting** A switch feature that routes incoming calls based on information supplied by the caller such as an account number. The caller hears an announcement and is prompted to select an option from those listed in the announcement.

Call Vectoring

Call Vectoring	A switch feature that provides a highly flexible method for processing ACD calls using VDNs and vectors as processing points between trunk groups and splits. Call Vectoring permits a treatment of calls that is independent of splits.
Call Work Code (CWC)	An ACD capability that allows the agent to enter a string of digits during or after the call and send them to <i>CMS</i> for management reporting.
calls carried	The number of inbound/outbound calls carried by a trunk.
change agent skills	A <i>CMS</i> capability that allows you to change a single agent's skill assignment or apply an agent template to multiple agents.
Call Management System (CMS)	A software product used to connect to a switch that monitors and records data for large volumes of telephone calls that are processed through the ACD feature of the switch.
CMSADM backup	A backup that saves all the file systems on the <i>CMS</i> server including the Solaris operating system, <i>CMS</i> programs, and <i>CMS</i> administration data.
CONN	See <u>connected (CONN)</u> .
connected (CONN)	A trunk state in which a caller and an agent are connected on an ACD call.
connected call	A non-ACD call connected to an agent through a VDN and for which <i>CMS</i> receives an indication that the call rang or was answered.
CONVERSANT	See Avaya Interactive Response.
current	A CMS operation that displays data from the current interval.
current interval	The current intrahour period of time (15, 30, or 60 minutes) which is archived to the historical database when the period expires. The current interval is part of the real-time database.
current wait time	The time a call has waited for service in a call queue adjusted for queue priority.
custom report	A real-time or historical report that has been customized from standard reports or created by the user through the Custom Reports subsystem of <i>CMS</i> .
CWC	See Call Work Code (CWC).
DABN	See dequeued and abandoned (DABN).
DACD	See direct agent ACD (DACD).
DACW	See direct agent ACW (DACW).
daily data	Interval data that has been converted to a 1-day summary.
data collection	This <i>CMS</i> feature can be used to determine if call activity and the associated ACD data is recorded. In many maintenance operations, it is necessary to disable data collection. If data collection is turned off, <i>CMS</i> does not void data on current call activity.
database	The <i>CMS</i> databases are used to store ACD data according to a specific time period. This can be current and previous intrahour real-time data or intrahour, daily, weekly, and monthly historical data.

database item	A name for a specific type of data stored in one of the <i>CMS</i> databases. A database item can store ACD identifiers such as split numbers or names, login IDs, and VDNs or statistical data on ACD performance such as number of ACD calls, wait time for calls in queue, current states of individual agents, and so forth.
database tables	Each <i>CMS</i> database can consist of several database tables which are used to logically separate data based on different criteria. For example, historical reports can be used to display data on a daily, weekly, or monthly basis; each of these different time measurements are stored in separate database tables.
DDC	See direct department calling (DDC).
dequeued and abandoned (DABN)	A trunk state in which the trunk quickly goes idle after the caller abandons the call.
designer reports	Customized reports that you create and run through Avaya CMS Supervisor Report Designer. See the Avaya CMS Supervisor Report Designer User Guide for more information.
Dictionary	A CMS capability used to assign easily-interpreted names to contact center entities such as login IDs, splits/skills, trunk groups, VDNs, and vectors.
DID	See direct inward dialing (DID).
Digital Subscriber Line (DSL)	A public switched telephone network (PSTN) line that provides high bandwidth for short distances using copper cable. This type of line operates at the Basic Rate Interface (BRI) with two 64-kilobit per second circuit-switched channels and one 16-kilobit packet-switched channel. DSL can carry both data and voice signals at the same time.
direct agent ACD (DACD)	An agent state in which the agent is on a direct agent ACD call.
direct agent ACW (DACW)	An agent state in which the agent is in the after call work (ACW) state for a direct agent ACD call.
direct agent calling	An EAS capability that allows a caller to reach the same agent every time and allows the contact center to include the call as an ACD call in management tracking. This is ideal for claims processing in which a client needs to speak with the agent handling the claim. It also ensures a high level of customer service without reducing management control.
direct department calling (DDC)	A non-EAS option to select an agent when more than one agent is available. The call goes to the agent closest to the top of an ordered list.
direct inward dialing (DID)	The use of an incoming trunk used for dialing directly from the public network into a communications system without help from the attendant.
DSL	See Digital Subscriber Line (DSL).
EAS	See Expert Agent Selection (EAS).
entity	A generic term for an agent, split/skill, trunk, trunk group, VDN, or vector.
EWT	See expected wait time (EWT).

exception	Activity in an ACD which falls outside the limits you have defined and usually indicates abnormal or unacceptable performance of the ACD, agents, splits/ skills, VDNs, vectors, trunks, or trunk groups. The parameters used to determine the occurrence of an exception are defined in the Exceptions subsystem of <i>CMS</i> .
exception permissions	The rights that a user has in being notified or viewing the instances where calls, contact center entities, or subsystems operated above or below specified thresholds.
expected wait time (EWT)	An estimate of how long a caller will have to wait to be served by a contact center while in queue. EWT is based on current and past traffic, handling time, and staffing conditions. Time spent in vector processing before being queued and time spent ringing an agent with manual answering is not included in the EWT. This is switch-based calculation.
Expert Agent Selection (EAS)	An optional Communication Manager feature that routes incoming calls to an agent who is a member of the specific skill required to handle the problems of the caller.
extension call	A call originated by an agent or a non-ACD call received by an agent. Extension calls include calls an agent makes to set up a conference or transfer.
FBUSY	See forced busy (FBUSY).
FDISC	See forced disconnect (FDISC).
flex agents	Agents who have the role of roving, backup, or allocated. Top and reserve agents are not flex agents. See the <i>Avaya Business Advocate User Guide</i> for more information.
flexible routing	An ACD capability that allows you to choose how incoming calls should be routed to agents in a split. Calls can be routed to the first available agent or to the most-idle agent.
forced busy (FBUSY)	A trunk state in which the caller receives a forced busy signal.
forced disconnect (FDISC)	A trunk state in which the caller receives a forced disconnect.
Forced Multiple Call Handling (FMCH)	A feature available for Communication Manager system which, when activated for a split/skill, allows calls to be automatically delivered to an idle line appearance if the agent is in the AI (auto-in) or MI (manual-in) work mode and if an unrestricted line appearance is available on the voice terminal.
Forecast, Avaya CMS	An Avaya product used to generate reports displaying expected call traffic and agent/trunk group requirements for the contact center for a particular day or period in the future.
historical database	A <i>CMS</i> database consisting of intrahour records for up to 62 days, daily records for up to 5 years, and weekly/monthly records for up to 10 years for each <i>CMS</i> -measured agent, split/skill, trunk, trunk group, VDN, and vector.

LOGON

historical reports	Reports of past ACD data for various agent, split/skill, trunk, trunk group, VDN, or vector activities. Historical reports summarize call data into daily, weekly, or monthly totals.
HOLD	A trunk state in which an agent has put a call on this trunk on hold.
IDLE	A trunk state in which this trunk is not in use and is waiting for a call.
II	See Information Indicator (II).
Inbound Call Management (ICM)	A set of switch and adjunct features using ASAI to enable the adjunct to provide automatic screen delivery and call routing.
Information Indicator (II)	A 2-digit code that identifies the type of originating line for incoming ISDN PRI calls, such as hotel or pay phone.
INFORMIX	A relational database management system used to store and retrieve CMS data.
INFORMIX SQL	An interactive interface typically used to view the INFORMIX database.
Integrated Services Digital Network (ISDN)	A digital standard for telephony that enables analog and digital signals on the same line.
interval ASA	The average time a call waits in queue before connecting to an agent, calculated on reporting interval boundaries. Interval ASA is cleared to zero at the start of each reporting interval. See also <u>Average Speed of Answer (ASA)</u> and <u>rolling ASA</u> .
interval-based items	A category of database items that represent the amount of time during a collection interval spent on a particular activity. Interval-based items are updated throughout the collection interval and timing is restarted at the end of the interval.
intrahour interval	A 15-, 30-, or 60-minute segment of time starting on the hour. An intrahour interval is the basic unit of <i>CMS</i> report time.
ISDN	See Integrated Services Digital Network (ISDN).
LAN	See local area network (LAN).
local area network (LAN)	A private interactive communication network that allows computers and compatible devices to communicate over short distances, usually less than one mile, at high data transfer rates.
Logical Agent	An EAS feature that associates an agent's login ID with a physical extension when the agent logs in. Properties such as the assigned skills, class of restriction, and coverage path are associated with the login ID rather than the physical extension. This allows agents to log in at any available set.
LOGOFF	An agent trace work mode in which an agent is logged out and not available to take ACD calls.
LOGON	An agent trace work mode in which an agent is logged in and available to take ACD calls.

logout reason codes	Codes that enable an agent to specify the reason for logging out such as the end of a shift or for training.
Look Ahead Interflow (LAI)	A switch feature that can be used to balance the call load among multiple contact centers. LAI works with Call Vectoring and ISDN PRI trunks to intelligently route calls between contact centers. This allows multiple contact centers to share workloads, expand hours of coverage, and allows calls o be transparently handled by contact centers in different time zones.
maintenance	A <i>CMS</i> subsystem that is used for routine maintenance of <i>CMS</i> , such as backing up data, checking on the status of the connection to the switch, and scanning the error log.
maintenance busy (MBUSY)	A trunk state in which the trunk is out of service for maintenance purposes.
Manual-In (MI)	An ACD work mode in which an agent is available to receive an ACD call and is automatically placed into the ACW state upon release from the call.
MBUSY	See maintenance busy (MBUSY).
MCH	See Multiple Call Handling (MCH).
measured	A term meaning that an ACD element such as agent, split/skill, trunk, trunk group, VDN, or vector that is identified to <i>CMS</i> for data collection. If the ACD element is not measured, no data is collected.
MI	See Manual-In (MI).
MIA	See Most Idle Agent (MIA).
monthly data	Daily data that has been converted to a monthly summary.
Most Idle Agent (MIA)	An ACD distribution method that maintains a queue of idle agents. An agent is put at the end of the list for a particular split when the agent completes an ACD call for that split. The agent continues to advance on the list as long as he or she remains staffed and in ACW, AVAIL, or on AUXIN/OUT extension calls from the AVAIL mode.
Multiple Call Handling (MCH)	A process in which an agent receives an ACD call while other calls are active on the agent's station. The agent must put the current call on hold and press Auto-In/Manual-In to receive another ACD call.
multiple split queuing	A Call Vectoring capability that directs a call to up to three splits at the same time, with the first agent who is free receiving the call.
multi-user mode	A CMS state in which any administered user can log into CMS and data continues to be collected if the data collection feature is enabled.
name (synonym) fields	A field in which you can input a name (synonym) that you have entered in the Dictionary. For example, you can input names of agents, splits/skills, agent groups, trunk groups, VDNs, or vectors.
night service	A switch capability that enables calls that arrive after business hours or on weekends to be automatically re-routed to a split, an announcement, or an alternate destination set up for after-hours coverage.

nonprimary split/ skill	The second and third splits/skills to which a call queued to multiple splits/skills queues in a VDN. Also called secondary and tertiary split/skill, respectively.
OTHER	An agent work mode in which the agent is on a direct agent call, on a call for another split or skill, or has put a call on hold and has not chosen another work mode.
Outbound Call Management (OCM)	A set of switch and adjunct features using ASAI that distributes outbound calls initiated by an adjunct to internal extensions (usually ACD agents).
phantom abandon call timer	A <i>CMS</i> capability that tracks information about abandoned calls. When the phantom abandon call timer is enabled, calls with a duration shorter than the administered value (0 to 10 seconds) are counted as phantom abandon calls. Setting the timer to 0 disables this capability.
percent within service level	The percentage of calls that you are expecting or targeting to be answered by an agent within a specific number of seconds.
previous interval	An intrahour interval that is part of the real-time database. At the end of each intrahour interval, the contents of the current intrahour interval are copied to the previous intrahour interval portion of the real-time database.
primary skill	A skill assigned to an agent as that agent's strongest skill. Primary skills are the areas in which the agent has the most expertise.
pseudo-ACD	An area created on <i>CMS</i> to place previously backed-up ACD data. A pseudo-ACD is not a live (real) ACD and does not communicate with any switch.
queue	A holding area for calls waiting to be answered in the order in which they were received. Calls in a queue may have different priority levels, in which case, calls with a higher priority are answered first.
QUEUED	A trunk state in which an ACD call has seized the trunk and is queued to a split/ skill, waiting for an agent to answer.
read permission	A permission with which a <i>CMS</i> user can access and view data; for example, running reports or viewing the Dictionary subsystem.
real-time database	A <i>CMS</i> database consisting of the current intrahour data on each CMS-measured agent, split, trunk, trunk group, VDN, and vector.
real-time reports	A report that shows ACD call activity on agents, split/skills, trunks, trunk groups, VDNs, and vectors for the current or previous intrahour interval.
Redirect On No Answer	An ACD capability that assist the user if a call is not answered in a specified number of rings. The terminal extension, including ports with VRUs, is busied out and the call goes back into the queue at top priority.
refresh rate	The number of seconds that <i>CMS</i> should wait for each update of real-time report data.
reserve agent	An agent whose skills are set so that they do not have a top skill, but are used to handle calls when all other agents of that skill are unavailable. Reserve agents are used for high-priority skills where customers must not wait for long periods of time.

RINGING

RINGING	 An agent state consisting of the time a call rings at an agent's voice terminal after leaving the queue and before the agent answers the call.
	2) A trunk state in which a call is ringing at the agent's voice terminal.
rolling ASA	A running, weighted, average calculation made without using interval boundaries. Rolling ASA is used for vector routing; it is calculated on the Communication Manager system and set to <i>CMS</i> .
scripting	A CMS Supervisor capability that allows you to automate operations such as changing an agent's skills, running a report, and exporting report data.
secondary skill	A skill assigned to an agent in a subject that is not that agent's strongest area of expertise. Secondary skills are used in Communication Manager systems with Expert Agent Selection (EAS).
SEIZED	A trunk state in which an incoming or outgoing call is using the trunk.
service level	A time, in seconds, within which all calls should be answered. Also called acceptable service level.
Service Observing - Remote	A feature that allows a user to dial into the switch and monitor a call.
Service Observing - VDNs	A feature available with Communication Manager systems that give a user the ability to monitor the treatment that a call receives as it is processed by a VDN.
shortcut	A series of tasks which, when run, are performed on the <i>CMS</i> server. Shortcuts are a fast, easy way to view windows every day for the same ACD entities.
single-user mode	A <i>CMS</i> mode in which only one administrator can log in to the <i>CMS</i> server. Data continues to be collected if the data collection feature is enabled.
skill	See agent skill.
skill level	A rating from 1 (highest) to 16 (lowest) that indicates an agent's level of expertise in handling calls for which that expertise is needed.
screen-labeled key (SLK)	The first eight function keys at the top of the keyboard that correspond to the screen labels at the bottom of the <i>CMS</i> ASCII terminal screen. The screen labels indicate each key's function.
split	A group of extensions that receive calls.
staffed agent	An agent who is currently logged in to the switch.
standard reports	The set of reports that are supplied with CMS or CMS Supervisor.
station	1) An unmeasured extension
	 An extension that is not currently staffed by an agent or that is a member of an unmeasured split/skill.
switch	A system providing voice or voice/data communication services for a group of terminals.
timetable	A <i>CMS</i> feature that allows you to schedule one or more activities to run unattended. Timetables can be set to run once or at multiple times.

trunk	A telephone circuit that carries calls between two switches, between a central office and a switch, or between a central office and a telephone.
trunk group	A group of trunks that are assigned the same dialing digits: either a phone number or a direct inward dialed (DID) prefix.
uniform call distribution (UCD)	A method of call distribution in which the most idle agent for a skill receives the call (if the agent is available).
universal call identifier (UCID)	A number that uniquely identifies a call in a network of nodes that support UCID.
UNKNOWN	1) An agent state in which CMS does not recognize the state of the agent.
	2) A trunk state in which CMS does not recognize the state of the trunk.
UNSTAF	An agent state in which the agent is not logged in and, therefore, is not tracked by <i>CMS</i> .
VDN	See <u>Vector Directory Number (VDN)</u> .
VDN calls-counted	See <u>active VDN calls</u> .
VDN or Origin Announcement (VOA)	A short announcement that is assigned to a VDN through switch administration. The VOA identifies the origin or purpose of a call for the contact center agent who answers the call.
VDN skill preference	A prioritized list of agent skills administered for a VDN that are needed or preferred for the answering agent. VDN skill preferences require a call to be routed to an ACD agent with a particular attribute or set of attributes.
vector	A list of steps that process calls according to a user definition. The steps in a vector can send calls to splits, play announcements and music, disconnect calls, give calls a busy signal, or route calls to other destinations based on specific criteria.
vector command	A step in a vector that describes the action to be executed for a call.
Vector Directory Number (VDN)	An extension number that enables calls to connect to a vector for processing. A VDN can connect calls to a vector when the calls arrive over an assigned automatic-in trunk group or when the calls arrive over a DID trunk group and the final digits match the VDN. The VDN by itself may be dialed to access the vector from any extension connected to the switch.
vector step	A single task within a vector that performs an action regarding a call. A vector step consists of a command with the possibility of one or more conditions or parameters, if necessary.
vector step condition	A condition accompanying a vector command that defines the circumstances in which the command is applied to a call.
VOA	See VDN or Origin Announcement (VOA).
voice terminal	A telephone set, usually with buttons.
weekly data	Daily data that has been converted to a weekly summary.

write permission A permission with which a *CMS* user can add, modify, or delete data and execute processes.
