Overview for the Avaya G450 Branch Gateway
Link disclaimer

Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

License

THE SOFTWARE LICENSE TERMS AVAILABLE ON THE AVAYA WEBSITE, HTTP://SUPPORT.AVAYA.COM/LICENSEINFO OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, ARE APPLICABLE TO ANYONE WHO DOWNLOADS, USES AND/OR INSTALLS AVAYA SOFTWARE, PURCHASED FROM AVAYA INC., ANY AVAYA AFFILIATE, OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE) UNDER A COMMERCIAL AGREEMENT WITH AVAYA OR AN AVAYA CHANNEL PARTNER, UNLESS OTHERWISE AGREED TO BY AVAYA IN WRITING. AVAYA DOES NOT EXTEND THIS LICENSE IF THE SOFTWARE WAS OBTAINED FROM ANYONE OTHER THAN AVAYA, AN AVAYA AFFILIATE OR AN AVAYA CHANNEL PARTNER. AVAYA RESERVES THE RIGHT TO TAKE LEGAL ACTION AGAINST YOU AND ANYONE ELSE USING OR SELLING THE SOFTWARE WITHOUT A LICENSE. BY INSTALLING, DOWNLOADING OR USING THE SOFTWARE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE INSTALLING, DOWNLOADING OR USING THE SOFTWARE (HEREINAFTER REFERRED TO INTERCHANGEABLY AS “YOU” AND “END USER”), AGREE TO THESE TERMS AND CONDITIONS AND CREATE A BINDING CONTRACT BETWEEN YOU AND AVAYA INC. OR THE APPLICABLE AVAYA AFFILIATE (“AVAYA”).

Avaya grants you a license within the scope of the license types described below, with the exception of Heritage Nortel Software, for which the scope of the license is detailed below. Where the order documentation does not expressly identify a license type, the applicable license will be a Designated System License. The applicable number of licenses and units of capacity for which the license is granted will be specified in an applicable license (1), unless a different number of licenses or units of capacity is specified in the documentation or other materials available to you. “Software” means Avaya’s computer programs in object code, provided by Avaya or an Avaya Channel Partner, whether as stand-alone products, pre-installed, or remotely accessed on hardware products, and any upgrades, updates, bug fixes, or modified versions thereto. “Designated Processor” means a single stand-alone computing device. “Server” means a Designated Processor that hosts a software application to be accessed by multiple users. “Instance” means a single copy of the Software executing at a particular time: (i) on one physical machine; or (ii) on one deployed software virtual machine (“VM”) or similar deployment.

License types

- Designated System(s) License (DS). End User may install and use each copy or an Instance of the Software only on a number of Designated Processors up to the number indicated in the order. Avaya may require the Designated Processor(s) to be identified in the order by type, serial number, feature key, Instance, location or other specific designation, or to be provided by End User to Avaya through electronic means established by Avaya specifically for this purpose.

- Concurrent User License (CU). End User may install and use the Software on multiple Designated Processors or one or more Servers, so long as only the licensed number of Units are accessing and using the Software at any given time. A “Unit” means the unit on which Avaya, at its sole discretion, bases the pricing of its licenses and can be, without limitation, an agent, port or user, an e-mail or voice mail account in the name of a person or corporate function (e.g., webmaster or helpdesk), or a directory entry in the administrative database utilized by the Software that permits one user to interface with the Software.
Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Hosted Service, or hardware provided by Avaya. All content on this site, the documentation, Hosted Service, and the Product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, in whole or in part, including any code and software unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, and or use without the express written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Virtualization

Each virtual appliance has its own ordering code. Note that each instance of a virtual appliance must be ordered separately. If the end-user customer or Business Partner wants to install two of the same type of virtual appliances, then two virtual appliances of that type must be ordered.
To prevent intrusions to your telecommunications equipment, you and your peers should carefully program and configure:

- Your Avaya-provided telecommunications systems and their interfaces
- Your Avaya-provided software applications, as well as their underlying hardware/software platforms and interfaces
- Any other equipment networked to your Avaya products

TCP/IP Facilities

Customers may experience differences in product performance, reliability and security depending upon network configurations/design and topologies, even when the product performs as warranted.

Product Safety Standards

This product complies with and conforms to the following international Product Safety standards as applicable:

- IEC 60950-1 latest edition, including all relevant national deviations as listed in the IECEE Bulletin—Product Category OFF: IT and Office Equipment.

This product may contain Class 1 laser devices.

- Class 1 Laser Product
- Luokan 1 Laserlaite
- Klass 1 Laser Apparat

Electromagnetic Compatibility (EMC) Standards

This product complies with and conforms to the following international EMC standards, as applicable:

- CISPR 22, including all national standards based on CISPR 22.
- CISPR 24, including all national standards based on CISPR 24.
- IEC 61000-3-2 and IEC 61000-3-3.

Avaya Inc. is not responsible for any radio or television interference caused by unauthorized modifications of this equipment or the substitution or attachment of connecting cables and equipment other than those specified by Avaya Inc. The correction of interference caused by such unauthorized modifications, substitution or attachment will be the responsibility of the user. Pursuant to Part 15 of the Federal Communications Commission (FCC) Rules, the user is cautioned that changes or modifications not expressly approved by Avaya Inc. could void the user's authority to operate this equipment.

Equipment With Direct Inward Dialing ("DID"):

Allowing this equipment to be operated in such a manner as to not provide proper answer supervision is a violation of Part 68 of the FCC’s rules.

Proper Answer Supervision is when:

1. This equipment returns answer supervision to the public switched telephone network (PSTN) when DID calls are:
   - answered by the called station,
   - answered by the attendant,
   - routed to a recorded announcement that can be administered by the customer premises equipment (CPE) user
   - routed to a dial prompt

2. This equipment returns answer supervision signals on all (DID) calls forwarded back to the PSTN.

Permissible exceptions are:

- A call is unanswered
- A busy tone is received
- A reorder tone is received

Avaya attests that this registered equipment is capable of providing users access to interstate providers of operator services through the use of access codes. Modification of this equipment by call aggregators to block access dialing codes is a violation of the Telephone Operator Consumers Act of 1990.

Automatic Dialers:

When programming emergency numbers and (or) making test calls to emergency numbers:

- Remain on the line and briefly explain to the dispatcher the reason for the call.
- Perform such activities in the off-peak hours, such as early morning or late evenings.

Toll Restriction and least Cost Routing Equipment:

The software contained in this equipment to allow user access to the network must be upgraded to recognize newly established network area codes and exchange codes as they are placed into service.

Failure to upgrade the premises systems or peripheral equipment to recognize the new codes as they are established will restrict the
customer and the customer’s employees from gaining access to the network and to these codes.

For equipment approved prior to July 23, 2001:

This equipment complies with Part 68 of the FCC rules. On either the rear or inside the front cover of this equipment is a label that contains, among other information, the FCC registration number, and ringer equivalence number (REN) for this equipment. If requested, this information must be provided to the telephone company.

For equipment approved after July 23, 2001:

This equipment complies with Part 68 of the FCC rules and the requirements adopted by the Administrative Council on Terminal Attachments (ACTA). On the rear of this equipment is a label that contains, among other information, a product identifier in the format US:AAAEQ##TXXX. If requested, this number must be provided to the telephone company.

The REN is used to determine the quantity of devices that may be connected to the telephone line. Excessive RENs on the telephone line may result in devices not ringing in response to an incoming call. In most, but not all areas, the sum of RENs should not exceed 5.0.

L’indice d’équivalence de la sonnerie (IES) sert à indiquer le nombre maximal de terminaux qui peuvent être raccordés à une interface téléphonique. La terminaison d’une interface peut consister en une combinaison quelconque de dispositifs, à la seule condition que la somme d’indices d’équivalence de la sonnerie de tous les dispositifs n’excède pas cinq.

To be certain of the number of devices that may be connected to a line, n’excède pas cinq.

To determine the number of devices that may be connected to a line, additional RENs may be assigned. For products approved after July 23, 2001, the REN for this product is 0.3.

The digits represented by ## are the REN without a decimal point (for example, 03 is a REN of 0.3). For earlier products, the REN is separately shown on the label.

Means of Connection:

Connection of this equipment to the telephone network is shown in the following table:

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice is not practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens, the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

If trouble is experienced with this equipment, for repair or warranty information, please contact the Technical Service Center at 1-800-242-2121 or contact your local Avaya representative. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A compliant telephone cord and modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant.

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

Installation and Repairs

Before installing this equipment, users should ensure that it is permissible to be connected to the facilities of the local telecommunications company. The equipment must also be installed using an acceptable method of connection. The customer should be aware that compliance with the above conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be coordinated by a representative designated by the supplier. It is recommended that repairs be performed by Avaya certified technicians.

Avaya Inc. in the United States of America hereby certifies that the equipment described in this document and bearing a TIA TSB-168 label identification number complies with the FCC’s Rules and Regulations 47 CFR Part 68, and the Administrative Council on Terminal Attachments (ACTA) adopted technical criteria.

Avaya further asserts that Avaya handset-equipped terminal equipment described in this document complies with Paragraph 68.316 of the FCC Rules and Regulations defining Hearing Aid Compatibility and is deemed compatible with hearing aids.

Copies of SDoCs signed by the Responsible Party in the U. S. can be obtained by contacting your local sales representative and are available on the following Web site: http://support.avaya.com/DoC.

Canadian Conformity Information

This Class A (or B) digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe A (ou B) est conforme à la norme NMB-003 du Canada.

This product meets the applicable Industry Canada technical specifications/Le présent matériel est conforme aux spécifications techniques applicables d’Industrie Canada.

European Union Declarations of Conformity

Copies of these Declarations of Conformity (DoCs) can be obtained by contacting your local sales representative and are available on the following Web site: http://support.avaya.com/DoC.

European Union Battery Directive

Avaya Inc. supports European Union Battery Directive 2006/66/EC. Certain Avaya Inc. products contain lithium batteries. These batteries are not customer or field replaceable parts. Do not disassemble. Batteries may pose a hazard if mishandled.

Japan

The power cord set included in the shipment or associated with the product is meant to be used with the said product only. Do not use the cord set for any other purpose. Any non-recommended usage could lead to hazardous incidents like fire disaster, electric shock, and faulty operation.

日本の取扱い注意: 本製品は、専用コードセットのみで使用することを推奨しています。本製品以外のコードを接続することを禁止しています。火災、感電、故障の原因となります。

If this is a Class A device:

This is a Class A product based on the standard of the Voluntary Control Council for Interference by Information Technology Equipment (VCCI). If this equipment is used in a domestic environment, radio disturbance may occur, in which case, the user may be required to take corrective actions.

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラス A 情報技術装置です。この装置は家庭環境で使用すると電波障害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。

If this is a Class B device:

This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラス B 情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。取扱説明書に従って正しい取り扱いをして下さい。

Trademarks

The trademarks, logos and service marks (“Marks”) displayed in this site, the Documentation, Hosted Service(s), and Product(s) provided by Avaya are the registered or unregistered Marks of Avaya, its affiliates, or other third parties. Users are not permitted to use such Marks without prior written consent from Avaya or such third party which may own the Mark. Nothing contained in this site, the Documentation, Hosted Service(s) and Product(s) should be construed as granting, by implication, estoppel, or otherwise, any license or right in and to the Marks without the express written permission of Avaya or the applicable third party.

Chapter 1: Introduction

Purpose

This document describes product characteristics and capabilities, including product overview and feature descriptions, interoperability, performance specifications, security, and licensing requirements.

Intended audience

The information in this book is intended for use by Avaya technicians, provisioning specialists, business partners, and customers.

Document changes since last issue

The following changes have been made to this document since the last issue:

• Added H.248 Registration Source Port section.
• Added Accessing diagnostic logs section.

**Avaya Mentor videos**

Avaya Mentor videos provide technical content on how to install, configure, and troubleshoot Avaya products.

**About this task**

Videos are available on the Avaya Support website, listed under the video document type, and on the Avaya-run channel on YouTube.

- To find videos on the Avaya Support website, go to [http://support.avaya.com](http://support.avaya.com), select the product name, and check the videos checkbox to see a list of available videos.

- To find the Avaya Mentor videos on YouTube, go to [http://www.youtube.com/AvayaMentor](http://www.youtube.com/AvayaMentor) and perform one of the following actions:
  - Enter a key word or key words in the Search Channel to search for a specific product or topic.
  - Scroll down Playlists, and click the name of a topic to see the available list of videos posted on the site.

*Note:*

Videos are not available for all products.

**Support**

Visit the Avaya Support website at [http://support.avaya.com](http://support.avaya.com) for the most up-to-date documentation, product notices, and knowledge articles. You can also search for release notes, downloads, and resolutions to issues. Use the online service request system to create a service request. Chat with live agents to get answers to questions, or request an agent to connect you to a support team if an issue requires additional expertise.

**Warranty**

Avaya provides a 90-day limited warranty on Branch Gateway. To understand the terms of the limited warranty, see the sales agreement or other applicable documentation. In addition, the standard warranty of Avaya and the details regarding support for Branch Gateway in the warranty period is available on the Avaya Support website at [https://support.avaya.com](https://support.avaya.com) under
Help & Policies > Policies & Legal > Warranty & Product Lifecycle. See also Help & Policies > Policies & Legal > License Terms.
Chapter 2: G450 Branch Gateway overview

Avaya Branch Gateway G450

The Avaya Branch Gateway G450 is a multipurpose gateway that can be deployed in medium to large sized branch locations or in wiring-closets servicing buildings and floors, in a campus environment.

The G450 can support up to 450 users when deployed as a Branch Gateway in a mid to large branch office of a large enterprise or a call center. This requires Avaya Aura® Communication Manager IP telephony software running on one or more Avaya S8XXX Servers. The Avaya S8300 Servers supports 50 Branch Gateways, the other Avaya Media Servers support up to 250 Branch Gateways.

Related topics:
Branch Gateway functions on page 13

Branch Gateway functions

The Branch Gateway:

- Works in conjunction with Avaya Aura® Communication Manager IP telephony software running on Avaya S8XXX Servers to help deliver intelligent communications to enterprises of all sizes
- Combines telephone exchange and data networking, by providing PSTN toll bypass, and routing data and VoIP traffic over the WAN
- Features a VoIP engine, an optional WAN router, and Ethernet LAN connectivity.
- Provides full support for Avaya IP and digital telephones, as well as analog devices such as modems, fax machines, and telephones.

Telephone services on a Branch Gateway are controlled by an Avaya S8XXX Server operating either as an External Call Controller (ECC) or as an Internal Call Controller (ICC). The Branch Gateway supports:

- The Avaya S8300 Server as an ICC, or as an ECC when the S8300 is installed in another Branch Gateway
- The Avaya S88XX and S85XX Servers as ECCs

An ICC can be used in addition to an ECC with the ICC installed as a Survivable Remote Server (SRS) designed to take over call control in the event that the ECC fails or the WAN link between
the branch office and main location breaks. The SRS provides full featured telephone service survivability for the branch office. The Branch Gateway also features Standard Local Survivability (SLS) (IPv4 only), which provides basic telephone services in the event that the connection with the primary ECC is lost.

Branch Gateway specifications

The G450 is a scalable device with a basic configuration consisting of one power supply unit (PSU) and 256 MB RAM, and a single DSP childboard supporting either 20, 80, or 160 VoIP channels. This configuration can be enhanced by adding a redundant PSU, up to two RAM modules of 256 MB each, and up to three additional DSP childboards, increasing the number of VoIP channels to 320 channels. You can also add an external compact flash, increasing the number of announcement files to 1024.

The Branch Gateway is a modular device, adaptable to support different combinations of endpoint devices. While fixed front panel ports support the connection of external LAN switches, network data ports, Ethernet WAN lines, and external routers, eight slots are provided for plugging in optional media modules. Pluggable media modules provide interfaces for different types of telephones, trunks, and WAN links. A combination is selected to suit the needs of the branch. A range of telephony modules provides full support for legacy equipment such as analog and digital telephones. A range of WAN modules provide support for Universal Serial Port and E1/T1 WAN links. IP phones are supported via an external LAN switch.

The G450 chassis features field replaceable RAM, external compact flash, DSPs, PSUs, fan tray, and main board module for enhanced reliability.

Branch Gateway features

Note:
Certain features are supported in IPv4 only.

- Hardware features:
  - 9-slot chassis (one slot for main board and eight slots for media modules)
- Swappable main board module
- Hot-swappable media modules
- Support for hot-swappable external compact flash
- Support for two load sharing hot-swappable power supply units
- Hot-swappable fan tray
- VoIP DSPs (up to 320 channels)
- Memory SIMMs

• Voice features:
  - H.248 gateway
  - Voice line interfaces:
    • IP phones
    • Analog phones
    • Avaya DCP phones
    • BRI Phones
    • FXS/Fax
    • VoIP
    • Fax and modem over IP
  - Voice trunk interfaces:
    • FXO
    • BRI
    • T1/E1

- Supported CODECs: G.711A/μLaw, G.729a, G.726
- Survivability features for continuous voice services:
  • Local Survivable Processor (LSP) (with S8300)
  • Standard Local Survivability (SLS) (IPv4 only)
  • Emergency Transfer Relay (ETR)
  • Modem Dial Backup
  • Dynamic Call Admission Control (CAC) for Fast Ethernet, Serial, and GRE tunnel interfaces
  • Inter-Gateway Alternate Routing (IGAR)
- DHCP and TFTP server to support IP phones images and configuration (IPv4 only)
- Announcements support
- Contact Closure support

• Routing and WAN features:
Note:
IPv6 is not supported on the WAN.
- Two WAN 10/100 Ethernet ports with traffic shaping capabilities
- T1/E1 and USP interfaces
- PPPoE (IPv4 only), Frame-relay, and PPP (IPv4 only)
- Routing Protocols: Static, OSPF, RIP
- VRRP (IPv4 only)
- Equal Cost Multi Path routing (ECMP)
- IPSec VPN
- cRTP
- WAN Quality of Service (QoS)
- Policy-based routing
- DHCP relay
- GRE tunneling
- Dynamic IP addressing (DHCP client/PPPoE)
- Object tracking
- Backup Interface

• LAN features:
  - Two LAN 10/100/1000 RJ-45 Ethernet ports (w/o POE)
  - Auto-negotiation
  - 4K MAC table with aging
  - 64 VLANs
  - Multi-VLAN binding, 802.1Q support
  - Ingress VLAN Security
  - Broadcast/Multicast storm control
  - Automatic MAC address aging
  - Rapid Spanning Tree
  - Port mirroring
  - RMON statistics
  - Port redundancy
  - LLDP (IPv4 only)

• Security hardened gateway features:
  - Media and signaling encryption
- Secured management
- Digitally signed gateway firmware
- Managed security service support
- Access list support

• Management features:
  - Avaya Device Manager
  - Embedded Web Manager (IPv4 only)
  - RADIUS Authentication support (IPv4 only)
  - SNMPv1 traps and SNMPv3 notifications
  - Telnet (IPv4 only) and SSHv2 support
  - SCP, TFTP, and FTP clients
  - Syslog client
  - Modem access for remote administration
  - Packet Sniffing
  - RTP-MIB
  - Backup and Restore on USB Flash drive

---

**G450 physical description**

There are two hardware versions of the G450, referred to as G450 1.x and G450 2.x. 1.x and 2.x refer to the hardware suffix of the G450, which is printed on the label displayed on the rear of the chassis. The differences between the two versions are minor, and include slightly different front panels, and different placement of components on the main boards.

### S8300D Media Server

#### S8300D hardware requirements

The hardware for the S8300D Server as primary controller is identical to the hardware for the S8300D Server as Survivable Remote Server. The difference between the two configurations is entirely in software.

#### S8300D Server components

For a list of S8300D components used in each S8300D configuration, see the S8300D Server configuration section.

#### S8300D Server configuration

The S8300D Server is supported by Communication Manager Release 5.2 and later.

An S8300D Server is an Intel Core 2 Duo U5700 processor that runs on the Linux operating system. The S8300D Server resides in Slot V1 of a gateway and includes:

- 250-GB hard disk
- 8-GB DRAM (with one 1 GB DIMM)
• 4-GB Internal Solid State Drive (SSD)
• One USB ports and a 10/100 Base-T port
  - One USB port supports a readable DVD/CD-ROM drive, which is used for system installations and upgrades.
• One services port
• One internal Compact Flash drive, which is used as the primary reboot device
• Modem support for alarming

---

**S8300D Server software**

In addition to Communication Manager software for applications, the S8300D Server runs the following software:

• A Web server that is used for:
  - Backing up and restoring customer data
  - Viewing current alarms
  - Server maintenance, including busy out, shutdown, and status of an S8300D Server
  - Security commands to enable and disable the modem
  - Security commands to start and stop the FTP server
  - Security commands to view the software license
  - SNMP access to configure trap destinations and to stop and start the master agent
  - Configuration information about the S8300D Server
  - Upgrading access to the S8300D Server

• Maintenance software
• Linux operating system
• Trivial File Transfer Protocol (TFTP) server
• Secure HTTP server for IP phone file downloads
• H.248 Branch Gateway Signaling Protocol
• Control messages tunnelled over H.323 Signaling Protocol

---

**Utility Services overview**

With Utility Services Release 6.2 and later, you can connect the Utility Services applications and tools with the duplex Communication Manager template or the Main Survivable Server.
template that runs on a separate server. When you deploy Utility Services as a standalone
template, the system supports Utility Services for the Communication Manager Duplex
deployment solution.

The following sections describe the Utility Services applications.

**Utility Admin**

With the Utility Admin page, you can configure and gain access to the following elements:

- **Software Version**: Displays the software versions of packages, operating system, IP
telephone firmware, media module firmware, and gateway firmware that are active on
Utility Services.

- **Firewall Rules**: Displays the IPv4 and IPv6 firewall rules of Utility Services.

- **IP Phone file server**: Supports the download of the IP telephone firmware and the settings
files. The server also supports backing up and restoring of IP telephone user
configuration, for example, speed dial configurations.

- **ADVD Settings Editor**: Provides a Web-based tool for configuring the Avaya Desktop
Video Device (ADVD) settings file. ADVD Settings Editor provides enhanced validation
to avoid wrong configurations.

- **IP Phone Settings Editor**: Provides a Web-based tool for configuring the IP telephone
settings file. IP Phone Settings Editor provides enhanced validation to avoid wrong
configurations.

- **IP Phone firmware management**: Supports the upload of the new telephone firmware to
the file server.

- **DHCP server**: Provides basic DHCP server capabilities for supporting IP telephones.

- **IPv6 DHCP server**: Provides IPv6 DHCP server capabilities for supporting IP
telephones.

- **IP Phone Push Server**: Displays the content from Push Server Database.

- **Log viewer**: Provides access of the log files for the Utility Services applications.

- **CDR tools**: Provides a Call Detail Record (CDR) collection capability. The CDR tool
collects the CDR records from Communication Manager and imports the records into the
Utility Services database. The CDR tool also provides simple examples on using the CDR
data in the database.
MyPhone Admin

With the MyPhone Admin page, you can gain access to the following configuration elements of MyPhone and IP telephone operations:

• MyPhone Feature Buttons: Enable or disables the features available to the MyPhone users.

• WML Links: Displays the default Wireless Markup Language (WML) page on the IP telephones. You can use this element to configure the default WML page.

• System Message: Configures the WML page. This element contains a block of text that is relevant to every IP telephone user.

For more information about MyPhone Admin, see Avaya Communication Manager Express MyPhone Administration Reference, 03-602578.

MyPhone

With the MyPhone page, you can:

• Configure the IP telephones.

• Configure buttons, language settings, EC500, Enhanced Call forwarding, and other features.

• Configure the security codes and other parameters.

For more information about MyPhone, see Avaya Communication Manager Express MyPhone Quick Reference, 03-602253.

MyPhone User Guide

You can download a PDF file or an online HTML file to view the MyPhone documentation.

Telephony media modules

The Branch Gateway supports the MM711, MM714, MM714B, and MM716 analog media modules, the MM712 and MM717 DCP media modules, the MM710 E1/T1 media module, and the MM720, MM721 and MM722 BRI media modules.

Related topics:

MM711 analog media module on page 26
MM714 analog media module on page 27
MM714B analog media module on page 28
The MM711 provides analog trunk and telephone features and functionality.

Related topics:
- MM711 ports on page 26
- Other MM711 features and functionality on page 26

MM711 ports
The administrator can configure any of the eight ports of the MM711 as follows:

- Central office trunk, either loop start or ground start
- Analog Direct Inward Dialing (DID) trunks, either wink-start or immediate-start
- 2-wire analog Outgoing CAMA E911 trunks for connectivity to the PSTN
- MF signaling is supported for CAMA ports
- Analog, tip/ring devices, such as single-line telephones with or without LED message waiting indication

Other MM711 features and functionality
- Three ringer loads (ringer equivalency number) for up to 2,000 feet (610 meters) for all eight ports
- Up to eight simultaneously-ringing ports

🌟 Note:
The Branch Gateway achieves this number of ports by staggering the ringing and pauses between two sets of up to four ports.

- Type 1 Caller ID
- Ring voltage generation for a variety of international frequencies and cadences

Figure 2: The MM711 media module
**MM714 analog media module**

The MM714 analog media module provides four analog telephone ports and four analog trunk ports.

**Note:**
The four analog trunk ports *cannot* be used for analog DID trunks. Instead, the four analog telephone ports must be used.

**Related topics:**
- MM714 ports on page 27
- MM714 line ports on page 27
- Other MM714 features and functionality on page 27

**MM714 ports**
The MM714 provides you with the capability to configure any of the four trunk ports as:

- A loop start or a ground start central office trunk with a loop current of 18 to 120 mA
- A two-wire analog Outgoing CAMA E911 trunk, for connectivity to the PSTN. MF signaling is supported for CAMA ports.

**MM714 line ports**
The MM714 provides you with the capability to configure any of the four telephone ports as:

- A wink-start or an immediate-start DID trunk
- Analog tip/ring devices such as single-line telephones with or without LED message waiting indication

**Other MM714 features and functionality**

- Three ringer loads, which is the ringer equivalency number for up to 2,000 feet (610 meters) for all eight ports
- Up to four simultaneously-ringing ports
- Type 1 caller ID and Type 2 caller ID
- Ring voltage generation for a variety of international frequencies and cadences

![Figure 3: The MM714 media module](image-url)
Optional components

**MM714B analog media module**

The MM714B analog media module provides all the features provided by the MM714 (see [MM714 analog media module](#) on page 27), and in addition provides an emergency transfer relay.

**Related topics:**
- [MM714B and ETR](#) on page 28

**MM714B and ETR**

In the event of system failure, the MM714B provides emergency transfer relay (ETR) services by connecting trunk port 5 and line port 4.

![Figure 4: The MM714B media module](#)

**MM716 analog media module**

The MM716 provides 24 analog ports supporting telephones, modem, and fax. These ports can also be configured as DID trunks with either wink-start or immediate-start. The 24 ports are provided via a 25 pair RJ21X amphenol connector, which can be connected by an amphenol cable to a breakout box or punch-down block.

**Related topics:**
- [MM716 ports](#) on page 28
- [Other MM716 features and functionality](#) on page 28

**MM716 ports**

The MM716 provides you with the capability to configure any of the 24 ports as:

- Analog tip/ring devices such as single-line telephones with or without LED message waiting indication
- A wink-start or an immediate-start DID trunk

**Other MM716 features and functionality**

- Three ringer loads, which is the ringer equivalency number for up to 2,000 feet (610 meters) for all 24 ports
- Up to 24 simultaneously-ringing ports
- Type 1 caller ID
- Ring voltage generation for a variety of international frequencies and cadences
The MM716 is compatible with Avaya Aura® Communication Manager release 3.1 and higher, and Branch Gateway firmware version 29.x.x and higher.

Figure 5: The MM716 media module

MM712 DCP media module

The MM712 DCP media module provides eight DCP telephone ports. The ports support two-wire Digital Communications Protocol (DCP) telephones. See Supported Avaya telephones on page 67 for a list of compatible DCP telephones.

Figure 6: The MM712 media module

MM717 DCP media module

The MM717 DCP media module provides 24 DCP ports of two-wire DCP functionality exposed as a single 25-pair amphenol connector. The DCP ports are exposed by connecting the module via a standard amphenol cable to a punch-down block with RJ-11 jacks. The MM717 allows you to use one of the smaller media module slots for a large number of DCP telephones.

Figure 7: The MM717 media module

MM710B E1/T1 media module

Note: This information applies to the MM710 as well.

The MM710B E1/T1 media module terminates an E1 or T1 trunk. The MM710 has a built-in Channel Service Unit (CSU) so an external CSU is not necessary. The CSU is only used for the T1 circuit.
The MM710B features:

- ISDN PRI capability (23B+D or 30B+D)
- Trunk signaling to support US and International CO or tie trunks
- Echo cancellation in either direction

Figure 8: The MM710B media module

**MM720 BRI media module**

The MM720 BRI media module provides eight ports with RJ-45 jacks that can be administered either as BRI trunk connections or BRI endpoint (telephone and data module) connections.

**Note:**

The MM720 BRI media module cannot be administered to support both BRI trunks and BRI endpoints at the same time. However, the MM720 BRI Media Module supports combining both B-channels together to form a 128-kbps channel. Communication Manager 3.1 enables combining B-channels, using BONDing, to form a higher bandwidth connection. Finally, if the MM720 BRI Media Module is administered to support BRI endpoints, it cannot be used as a clock synchronization source.

For BRI trunking, the MM720 BRI media module supports up to eight BRI interfaces to the central office at the ISDN TE reference point. Information is communicated in two ways:

- Over two 64-kbps channels, called B1 and B2, that can be circuit-switched simultaneously
- Over a 16-kbps channel, called the D-channel, that is used for signaling. The MM720 occupies one time slot for all eight D channels.

The circuit-switched connections have an A- or Mu-law option for voice operation. The circuit-switched connections operate as 64-kbps clear channels when in the data mode.

For BRI endpoints, the MM720 BRI media module supports up to 16 BRI stations and data modules that conform to AT&T BRI, World Class BRI, and National ISDN NI1/NI2 BRI standards. The MM720 BRI media module provides -40 volt phantom power to the BRI endpoints.

Figure 9: The MM720 media module
**MM721 BRI media module overview**

The MM721 Basic Rate Interface (BRI) media module contains eight ports. You can administer these ports either as BRI trunk or BRI endpoint connections, such as a telephone and data module.

**Note:**

You cannot administer the MM721 BRI media module to support both BRI trunks and BRI endpoints at the same time. You can use all eight ports on the MM721 for just stations or just trunks. You cannot use a mixture of ports for both applications.

For BRI trunking, the MM721 BRI media module supports up to eight BRI interfaces to the central office at the ISDN S/T reference point.

For BRI endpoints, each of the eight ports on the MM721 BRI media module supports integrated voice and data endpoints for up to 2 BRI stations or data modules or both. The MM721 BRI media module provides -48 volt phantom power to the BRI endpoints.

The MM721 BRI media module supports 4-wire S/T ISDN BRI on each interface.

The MM721 BRI media module communicates information in two ways:

- Over two 64-kbps channels called B1 and B2. You can circuit-switch these channels simultaneously
- Over a 16-kbps channel called the D-channel that is used for signaling

The circuit-switched connections have an A-law or Mu-law option for voice operation. In the data mode, circuit-switched connections operate as 64-kbps clear channels.

The MM721 supports the G450 and G430 Branch Gateways with Communication Manager Release 6.0.1 build 31_18_1.

You can also use the MM721 to support the G700 and G350 Branch Gateways with Communication Manager Release 5.2.1 build 30_17_2.

- In non-native admin mode, the system displays the MM721 media module as MM720X for the Communication Manager Release 6.0.1 build 31_18_1 and Release 5.2.1 build 30_17_2.
- In admin mode, the system displays the MM721 media module as MM721 with Communication Manager Release 6.2 and later. The changes on the system display on upgrading the system.

**Note:**

If you replace the MM720 media module, first uninstall the MM720 media module before installing the MM721 media module.
The following table provides the MM721 media module display information on different Communication Manager releases.

<table>
<thead>
<tr>

## Front panel of the MM721 media module

![MM721 media module front panel](image)

### MM722 BRI media module

The MM722 BRI media module provides two 4 wire S/T ISDN BRI 2B+D access ports with RJ-45 jacks. Each port interfaces to the central office at the ISDN T reference point. Information is communicated in the same manner as for the MM720. See [MM720 BRI media module](#) on page 30.

![MM722 media module](image)

**Figure 10: The MM722 media module**

**Note:**
The MM722 media module does not support BRI stations or combining both B channels together to form a 128-kbps channel.

### WAN media modules

The Branch Gateway supports the MM340 E1/T1 WAN and MM342 Universal Serial Port WAN media modules.
MM340 E1/T1 WAN media module

Note:
The MM340 is no longer sold.

The MM340 E1/T1 WAN media module provides a data WAN access port for the connection of an E1 or T1 WAN.

Figure 11: The MM340 media module

MM342 universal serial data WAN media module

Note:
The MM342 is no longer sold.

The MM342 media module provides one universal serial data WAN access port. The MM342 supports the following WAN protocols:

- V.35/ RS449
- X.21

Related topics:
Required cable on page 33

Required cable
For these connections, one of the following cables is required:

- Avaya Serial Cable DTE V.35 (Universal Serial Port to V.35)
- Avaya Serial Cable DTE X.21 (Universal Serial Port to X.21)

Figure 12: The MM342 media module
VOIP Modules in G450

A media processor or a VOIP module provides the resources/channels to support a voice call.

A G450 has four VOIP slots. It supports the VOIP modules listed in the table below.

<table>
<thead>
<tr>
<th>VOIP Modules</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MP20</td>
<td>Supports a maximum of 20 channels • Provides 25 VOIP channels for G.711 and G.726 • Provides 20 VOIP channels for G.729</td>
</tr>
<tr>

</table>
G450 media module capacity

The G450 chassis is designed to accommodate:

• Up to eight telephony media modules (MM710, MM711, MM712, MM714, MM714B, MM716, MM717, MM720, MM722)

• Up to three WAN media modules (MM340, MM342))

• Up to one S8300 server
Chapter 4: Summary of services

Summary of services

The Branch Gateway offers various services, which are described in Branch Gateway services on page 38, LAN services on page 49 and WAN services on page 51.

Related topics:
- IPv6 on page 37
- Branch Gateway services on page 38
- Physical media on page 39
- Media Gateway Controllers on page 41
- Audio and Video features on page 44

IPv6

Internet Protocol version 6 (IPv6) is the successor to IPv4. IPv6 supports 128–bit addresses and satisfies the rapidly growing demand for IP addresses. In contrast, IPv4 supported 32–bit. IPv6 also improves security, ease of configuration, and routing performance. IPv6 can coexist with IPv4 networks, easing the transition process.

The IETF (Internet Engineering Task Force) published RFC 2460, the internet standard specification that defines IPv6, in December 1998.

Addressing

By using 128-bit addresses, IPv6 has about $3.4 \times 10^{38}$ unique IP addresses, more than enough for every network device. This eliminates the IPv4 mechanisms, such as NAT (network address transitions), that are used to relieve IP address exhaustion. IPv6 addresses are normally written as hexadecimal digits with colon separators, for example: 2005:af0c:168d::752e:375:4020. The double colon “::” represents a string of zeroes, according to RFC4291.

Simplicity

IPv6 simplifies the routing process by changing the packet header and packet forwarding:
- Simplified packet header, despite enhanced functionality.
- IPv6 routers do not perform fragmentation. This is carried out by IPv6 hosts.
- IPv6 routers do not need to recompute a checksum when header fields change.
• Routers no longer need to calculate the time a packet spent in a queue.
• IPv6 supports stateless address configuration, so IPv6 hosts can be configured automatically when connected to a routed IPv6 network through ICMPv6. Stateful configuration using DHCPv6 and static configuration are also available.

Deployment and transition
There are several mechanisms that ease the deployment of IPv6 running alongside IPv4. The key to the transition is dual-stack hosts. Dual-stack hosts refers to the presence of two IP software implementations in one operating system, one for IPv4 and one for IPv6. These dual-stack hosts can run the protocols independently or as a Hybrid. The Hybrid is the common form on recent server operating systems and computers.

When an IPv6 host or network must use the existing IPv4 infrastructure to carry IPv6 packets, Tunneling provides the solution. Tunneling encapsulates IPv6 packets within IPv4. Tunneling can be either automatic or configured, the latter being more suitable for large, well-administered networks.

Key differences between IPv4 and IPv6

Feature Support in Avaya Branch Gateways
Certain Branch Gateway features are not supported in IPv6.

Branch Gateway services
The Branch Gateways provide a telephone exchange service, supporting the connection of various types of telephones and outside telephone lines. Telephones and lines are connected
to the Branch Gateways through media modules on the chassis. Different media modules provide access ports for different types of telephones and lines.

Telephony services are controlled by a Media Gateway controller (MGC) running Communication Manager (Communication Manager) call processing software. You can use the Avaya to configure many advanced telephone exchange functions. For more information, see Administrator’s Guide for Communication Manager.

This section describes the services the Branch Gateway provides as a gateway.

Related topics:
Voice over IP (VoIP) on page 39

Voice over IP (VoIP)

The Branch Gateway:
• Features up to four VoIP DSPs that provide voice services over IP data networks.
• Allows you to use many types of telephones and trunks that do not directly support VoIP.
• Translates voice and signalling data between VoIP and the system used by the telephones and trunks, as follows: Avaya media modules convert the voice path of traditional circuits such as analog trunk, T1/E1, and DCP to a TDM bus inside the Branch Gateway. The VoIP engine then converts the voice path from the TDM bus to a compressed or uncompressed and packetized VoIP on an Ethernet connection.

The Branch Gateway provides VoIP services over the LAN and WAN. The G450 supports up to four VoIP DSP childboards. Two types of childboard are supported, one providing 80 active VoIP channels and the other providing 20 active VoIP channels. The maximum number of active channels supported is 105. All channels can be bi-directional FAX, G.711 u/A, G.726A calls, in case of G.729A/AB the maximum number of channels on the on-board DSP is 20.

Physical media

There are various types of telephones and lines supported by the Branch Gateway and access ports provided for their connection.

Related topics:

Voice software on page 40
Outside telephone lines on page 40
Telephones

The Branch Gateway supports IP telephones, Avaya DCP telephones, analog telephones, and BRI telephones. For information about which Avaya telephones are supported, see Appendix B: Supported Avaya telephones on page 67.

Telephones must be connected to the correct type of port for the telephone type. Different types of telephone ports are provided by different media modules. The table below lists which ports you can use to connect each type of telephone. See Chapter 2: Optional components on page 21 for more information about each type of port and media module.

### Media Gateway Controllers

A Media Gateway Controller (MGC) controls telephone services on a Branch Gateway. An MGC may be internal or external to the Branch Gateway. An Internal Call Controller (ICC) is an internal MGC. An External Call Controller (ECC) is an external MGC that communicates with the Branch Gateway over the network.

An Avaya S8XXX server managed with Avaya Aura Communication Manager (Communication Manager) software acts as an MGC for the Branch Gateway.

**Related topics:**

Configuration rules for Branch Gateway options

The Branch Gateway provides the following configuration options to help you ensure continuous telephone services:

• You can configure the Branch Gateway to use up to four MGCs, each controller can have one IPv4 and IPv6 address. If the MGC is an S8710, S8720, or S8730, the first server on the list is normally be the primary C-LAN board connected to the S8xxx server. If the MGC is an S8400 or S85XX, the first server on the list is either the primary C-LAN board connected to the S8xxx server or an Ethernet port on the server that you enabled for processor Ethernet connections. If the MGC is an S8300, the first server on the list is the IP address of the S8300. The remaining servers are alternate C-LAN boards connected to the S8xxx server (S8400, S85XX, or S87XX servers), an S8300 configured as an SRS, or the port enabled as the Ethernet processor port on an S85XX configured as an SRS.

• To maximize the capacity of a G450, you can configure an external Avaya S85XX Server installed on the local site as the primary MGC.

• Using the connection preserving migration feature, you can configure the Branch Gateway to preserve the bearer paths of stable calls if the Branch Gateway migrates to another MGC (including an SRS), including migration back from an SRS to the primary MGC. A call for which the talk path between parties in the call is established is considered stable. A call consisting of a user listening to announcements or music is not considered stable and is not preserved. Any change of state in the call prevents the call from being preserved. For example, putting a call on hold during MGC migration causes the call to be dropped. Special features, such as conference and transfer, are not available on preserved calls. Connection preserving migration preserves all types of bearer connects except BRI. PRI trunk connections are preserved.

• You can configure Standard Local Survivability (SLS) to enable a local Branch Gateway to provide a degree of MGC functionality when no link is available to an external MGC. You configure SLS from the Branch Gateway using the CLI. SLS is supported for all analog interfaces, ISDN BRI/PRI trunk interfaces, non-ISDN digital DS1 trunk interfaces (T1 Robbed Bit and E1-CAS), IP telephones, IP softphones, and DCP telephones. SLS is available on IPv4 only.

• You can configure Enhanced Local Survivability (ELS) by installing an S8300 in the Branch Gateway as a Survivable Remote Server (SRS). In this configuration, the S8300 is not the primary MGC but takes over to provide continuous telephone service if all external MGCs become unavailable. Calls in progress continue without interruption when the S8300 takes over.

• You can configure the dialer interface to connect to the Branch Gateway’s primary MGC by a serial modem if the connection between the Branch Gateway and the MGC is lost.

• You can configure Avaya Communication Manager to support the auto fallback feature, which enables an Branch Gateway being serviced by an SRS to return to the primary MGC automatically when the connection is restored between the Branch Gateway and the MGC. When the Branch Gateway is being served by the SRS, it automatically attempts to register with the MGC at periodic intervals. The MGC can deny registration...
in cases in which it is overwhelmed with call processing, or in other configurable circumstances. By migrating the Branch Gateway to the MGC automatically, a fragmented network can be unified more quickly, without the need for human intervention.

**Note:**

Auto fallback does not include survivability. Therefore, there is a short period during registration with the MGC during which calls are dropped and service is not available. This problem can be minimized using the connection preserving migration feature.

- The Branch Gateway features a dynamic trap manager that enables you to ensure that the Branch Gateway sends traps directly to the currently active MGC. If the MGC fails, the dynamic trap manager ensures that traps are sent to the backup MGC.

### Branch Gateway management

The Branch Gateway is managed by the Avaya Aura® Communication Manager (Communication Manager). The Branch Gateway supports Avaya Aura® Communication Manager (Communication Manager) release 6.x and is backwards compatible with release 5.0 and above.

### Avaya Aura® Communication Manager features

Avaya Communication Manager is an open, scalable, highly reliable, and secure telephony application. Avaya Communication Manager provides user and system management functionality, intelligent call routing, application integration and extensibility, and enterprise communications networking. Avaya Communication Manager offers over 700 features, in the following categories:

- Telephony features
- Localization
- Collaboration
- Mobility
- Messaging
- Telecommuting
- System management
- Reliability
- Security, privacy, and safety
- Hospitality
• Attendant features
• Networking
• Intelligent call routing
• Application programming interfaces

Avaya Aura® Communication Manager software applications

• Determine where to connect your telephone call based on the number you dial
• Assign numbers to local telephones
• Play dial tones, busy signals, and prerecorded voice announcements
• Allow or prohibit access to outside lines for specific telephones
• Assign telephone numbers and buttons to special features
• Exchange call switching information with older telephone switches that do not support VoIP

For more information about Avaya Communication Manager software, see Administrator’s Guide for Avaya Aura® Communication Manager.

Audio and Video features

Branch gateways also provide the following audio and video related features:

Related topics:
  Call center capabilities on page 45
  Emergency Transfer Relay (ETR) on page 45
  Contact closure on page 45
  Fax, modem, TTY over IP on page 45
  Service Level Agreement Monitor on page 45
  T.38 Fax with Fallback to G.711 Pass-Through on page 46
  T.38 with Error Correction Mode on page 47
  List Trace and List Measurement on page 47
  V.150.1 Modem over IP on page 48
  MP160 DSP daughter board on page 48
Call center capabilities

With large announcement storage including optional compact flash, large voice trunk capacity, and 64 announcement ports for announcement record and playback, the Branch Gateway supports call center features.

Emergency Transfer Relay (ETR)

The Emergency Transfer Relay (ETR) feature provides basic telephone services in the event of a power outage or a failed connection to Communication Manager. ETR services are provided on the MM714B media modules by connecting the module’s trunk port 5 to line port 4. You can also optionally connect two external 808A ETR panels to the Branch Gateway. Each 808A Emergency Transfer Panel provides emergency trunk bypass or power-fail transfer for up to five incoming trunk loops to five analog phones and maintains connections on return from emergency transfer mode.

Contact closure

The contact closure feature is a controllable relay providing dry contacts for various applications. To implement the contact closure feature, connect an Avaya Partner Contact Closure Adjunct box to the CCA port on the Branch Gateway chassis. The adjunct box provides two contact closures that can be operated in either a “normally closed” or “normally open” state. The contact closures can control devices such as devices that automatically lock or unlock doors or voice recording units. The CCA port can be configured so that the connected devices can be controlled by an end device, such as a telephone. For example, a user can unlock a door by keying a sequence into a telephone keypad.

Fax, modem, TTY over IP

The Branch Gateway supports fax, modem, and TTY over IP.

Service Level Agreement Monitor

Service Level Agreement (SLA) Monitor is an integrated set of tools designed to help obtain highest end-to-end audio and video performance on a converged network. SLA Monitor communicates with agents embedded in the components of IP telephony and other sources through a web-based server application. With the data gathered by SLA Monitor through this
communication, you can check the network contribution to the performance of audio and video applications.

SLA Monitor performs analysis on the following network elements:

- Correct Differentiated Services (DiffServ) issues.
- Handle rogue applications.
- Provide real-time visibility to live sessions.

The SLA Monitor agent is a component of SLA Monitor. The agent participates in the enterprise end-to-end monitoring and troubleshooting of various types of network problems that affect IP telephony. The SLA Monitor agent can trace packets from source to destination. The SLA Monitor agent can also monitor the DiffServ markings at each hop as the packets travel through the network.

The SLA Monitor server, which is also part of SLA Monitor, collects router flow data as well as data from the SLA Monitor agents to help produce a clear picture of how the network and the media elements contribute to end-to-end quality.

G430 Branch Gateway and G450 Branch Gateway act as the SLA Monitor agents.

For more information on the SLA Monitor server and agent, see Operations Intelligence Suite Advanced Implementation Guide for SLA Mon.

T.38 Fax with Fallback to G.711 Pass-Through

T.38 Fax with Fallback to G.711 Pass-Through feature provides the functionality to enterprise networks managed by Communication Manager to interoperate with the older Verizon networks that currently do not support T.38 Fax for fax transport. A new codec type, T.38 Fax with Fallback to G.711 Pass-Through, is added to the IP codec set for fax mode.

The operation of T.38 Fax with Fallback to G.711 Pass-Through is summarized as follows:

- The call connection is signaled for standard T.38 fax relay.
- In the event of a failure to successfully negotiate T.38 fax relay, Communication Manager issues a re-INVITE to a G.711 mode of operation.
  - With PCM (G.711) codec sampling, there is an effort made to simulate a circuit-switched clear channel transport.
- The fax call is in the G.711 mode until the user disconnects.

**Note:**

This feature only works over SIP trunks.

For more information about the T.38 Fax Fallback to G.711 feature, see Avaya Aura® Communication Manager Feature Description and Implementation, 555-245-205.
T.38 with Error Correction Mode

Prior to Release 6.3, the T.38 Fax feature had no error correction capability. This is a problem for many customers and reduces the overall success rate of large fax transmissions. T.38 with Error Correction Mode (ECM) corrects errors without retransmitting multiple pages.

The operation of T.38 with ECM is summarized as follows:

- Communication Manager instructs the gateway to use ECM as part of the T.38 Fax capabilities exchange if:
  - The local media gateway indicates support for this feature through capability exchange.
  - IP codec set is set to T.38-standard.
  - ECM is set to yes.
- Fax machines with the memory to store page data can use ECM for error-free page transmission.
  - When ECM is enabled, a fax page is transmitted in a series of blocks that contain frames with packets of data.
  - After receiving the data for a complete page, a receiving fax machine notifies the transmitting fax machine of any frames with errors.
  - The transmitting fax machine then retransmits the specified frames.
  - This process is repeated until all frames are received without errors.
  - If the receiving fax machine is unable to receive an error free page, the fax transmission fails and one of the fax machines is disconnected.

For more information about the T.38 with Error Correction Mode feature, see Administering Network Connectivity on Avaya Aura® Communication Manager.

List Trace and List Measurement

The List Trace and the List Measurement commands include additional performance and diagnostic information for V.150 / Modem over IP calls.

The standard List Trace command provides enhanced information for the V.150.1 call state information. The goal is to avoid dependency on Wireshark captures and other logging tools. The List Trace command provides easy to read logging information.

The List Measurement command aggregates the usage for V.150.1 calls and provides this in the summary for G.711 equivalent call statistics.
For more information about the List Trace and List Measurement commands, see *Maintenance Commands for Avaya Aura® Communication Manager, Branch Gateways and Server*, 03-300431.

**V.150.1 Modem over IP**

The V.150.1 Modem over IP (MoIP) feature is an industry-standard compliant V-series MoIP transport for carrying modem traffic over an IP network and for supporting interoperability with secure third-party terminal devices.

**Note:**

This feature is only available on G450 Branch Gateway and requires the MP160 DSP card.

The V.150.1 MoIP supports the following modem modulation modes:

- V.32 and V.34 up to 33.6 Kbps.
- V.90 and V.92 up to 56 Kbps.

Benefits of V.150.1 MoIP:

- Can transform analog tone events into digital control messages, so that the protocol can pass over hops.
- Can recover from loss and operate at higher speeds up to V.92 as the protocol is sent in sequenced packets.
- Can interoperate with many different vendors.
- Can eliminate extra trunking because of convergence of data, voice, and fax.

For more information about V.150.1 (MoIP), see *Configuring V.150.1 on the Avaya G450 Branch Gateway*.

**MP160 DSP daughter board**

To support the V.150.1 Modem over IP feature on the G450 Branch Gateway, a new DSP card MP160 is introduced in Release 6.3. MP160 supports up to 160 VoIP channels on the G450 Branch Gateway. MP160 is used for V 150.1 and non V 150.1 calls on the G450 Branch Gateway. The G450 supports mixed DSP boards of different DSP channel capacities. The DSP channel count on G450 Branch Gateway must not exceed 320.

For more information about MP160 DSP daughter board, see *Configuring V.150.1 on the Avaya G450 Branch Gateway*. 
### Additional features

**H.248 Registration Source Port**

You can define the source port range that the gateway uses when registering with Communication Manager by using the following CLI commands:

- `set registration source-port-range`
- `show registration source-port-range`
- `set registration default source-port-range`

If you do not specify a range, the gateway selects a port within the default range of 1024 to 65535.

For more information about the CLI commands, see *CLI Reference Avaya Branch Gateway G450*, 03-602056.

**Accessing diagnostic logs**

With the following CLI commands, you can obtain diagnostic logs.

- `show all logs`
- `show event-log`
- `system show reset-log`
- `show dev log file`

For troubleshooting, you must send the diagnostic logs to Avaya technical support team.

For more information about accessing diagnostic logs and the CLI commands, see *Administering Avaya G450 Branch Gateway*, 03-603234 and *CLI Reference Avaya Branch Gateway G450*, 03-602056.

### LAN services

You can use the Branch Gateway as a LAN switch. You can also integrate the Branch Gateway into an existing LAN.
LAN physical media

The Branch Gateway provides LAN services through the fixed LAN ports on the chassis front panel for the connection of external LAN switches or local data devices. The LAN ports are connected to the internal LAN switch and support HP auto-MDIX, which automatically detects and corrects the polarity of crossed cables. This results in simplified LAN installation and maintenance.

VLANs

In the Branch Gateway, you can configure VLANs on the fixed LAN ports.

The Branch Gateway G450 supports up to 64 VLANs. The following VLAN features are supported:

- VLAN port grouping. Port VLANs can be used to group LAN ports into logical groups.
- Ingress VLAN Security. You configure a list of ingress VLANs on each port. Any packets tagged with an unlisted VLAN are dropped when received on the port.
- Class of Service (CoS) tagging. Packets are tagged with VLANs per CoS.
- Inter-VLAN routing. You can configure specific VLANs to permit access to the WAN while others can be configured to deny access to the WAN.

Rapid Spanning Tree Protocol (RSTP)

The IEEE 802.1D (STP) and IEEE 802.1w (RSTP) Spanning Tree Protocols are supported on the ETH LAN ports.
Port mirroring

The Branch Gateway supports network traffic monitoring by port mirroring. You can configure port mirroring on any LAN port. You implement port mirroring by connecting an external traffic probe device to one of the LAN ports. The probe device monitors traffic that is sent and received through other ports by copying the packets and sending them to the monitor port.

Port redundancy

You can configure port redundancy on the Branch Gateway. Port redundancy enables you to provide both a primary link and a backup link to an important resource.

Link Layer Discovery Protocol (LLDP)

LLDP simplifies network troubleshooting and enhances the ability of network management tools to discover and maintain accurate network topologies in multi-vendor environments. LLDP defines a set of advertisement messages (TLVs), a protocol for transmitting the TLVs, and a method for storing the information contained in the received TLVs. This allows stations attached to a LAN to advertise information about the system and about the station’s point of attachment to the LAN to other stations attached to the same LAN. These can be reported to the management station via SNMP MIBs.

LLDP is supported on the front panel ETH LAN ports.

WAN services

The Branch Gateway has an internal router and provides direct access to outside WAN lines. You can use the Branch Gateway as the endpoint device for a WAN line. You can also use the Branch Gateway as the router for a WAN line with an external endpoint device.

⚠️ Note:

Certain WAN services are supported on IPv4 only.

Related topics:
WAN physical media on page 52
WAN features on page 53
WAN physical media

To use the Branch Gateway as the endpoint device for a WAN, install a WAN media module and connect the WAN line to a port on the media module. When you connect a WAN line to a media module, the Branch Gateway serves as the router for the WAN line.

You can also use the fixed ETH WAN Fast Ethernet port as a WAN endpoint by configuring the port’s interface for PPPoE encapsulation (ADSL modem) or Ethernet-DHCP/static IP (cable modem).

To use the Branch Gateway as a router, connect the external endpoint device to the ETH WAN port on the Branch Gateway front panel using a standard network cable.

Related topics:
- WAN line support on page 52
- Media modules necessary for each WAN line on page 52

WAN line support

The Branch Gateway supports the following types of data WAN line:

- E1/T1
- Universal Serial Port
- PPPoE (ADSL modem)
- Ethernet-DHCP/static IP (cable modem)

Media modules necessary for each WAN line

The table below lists which media modules to install to connect each type of outside WAN line. For more information about each type of media module, see Chapter 2: Optional components on page 21.

Table 6: Outside WAN lines supported and matching media modules

<table>
<thead>
<tr>

<tr>
<td>E1/T1 data lines</td>
<td>MM340</td>
</tr>
<tr>
<td>PPPoE (ADSL modem)</td>
<td>Chassis</td>
</tr>
</tbody>
</table>
WAN features

The Branch Gateway supports the following WAN features:

**Note:**
These features are only available on IPv4.

- **Traffic shaping.** The traffic shaping function estimates the parameters of the incoming traffic and takes action if it measures traffic exceeding agreed parameters. The action could be to drop the packets or mark them as being high drop priority.
- **PPP over channeled and fractional E1/T1.** The Branch Gateway has the ability to map several PPP sessions to a single E1/T1 interface.
- **PPP over Universal Serial Port**
- **PPPoE**
- **Unframed E1 for enabling full 2.048 Mbps bandwidth usage**
- **Point-to-Point Frame Relay encapsulation over channelized/fractional/unframed E1/T1 ports or over a Universal Serial Port interface**
- **Frame Relay LMI types supported: ANSI (Annex D), ITU-T:Q-933 (Annex A0), LMI-Rev1, and No LMI**
- **Backup functionality supported between any type of Serial Layer 2 interface**
- **Dynamic Call Admission Control (CAC) for Fast Ethernet, Serial, and GRE tunnel interfaces.** Dynamic CAC provides enhanced control over WAN bandwidth. When Dynamic CAC is enabled on an interface, the Branch Gateway informs the MGC of the actual bandwidth of the interface and tells the MGC to block calls when the bandwidth is exhausted.
- **Quality of Service (QoS).** The Branch Gateway uses Weighted Fair VoIP Queuing (WFVQ) as the default queuing mode for WAN interfaces. WFVQ combines weighted fair queuing (WFQ) for data streams and priority VoIP queuing to provide the real-time response time that is required for VoIP. The Branch Gateway also supports the VoIP Queue and Priority Queue legacy queuing methods.
- **Weighted Random Early Detection (WRED).** The Branch Gateway uses WRED on its ingress and egress queues to improve the performance of the network when overloaded. The purpose of WRED is to indicate to transmitting hosts to reduce their transmission speed when the ingress Branch Gateway queues are congested.
- **Policy.** Each interface on the Branch Gateway can have four active policy lists:
  - Ingress Access Control List
  - Ingress QoS List
- Egress Access Control List
- Egress QoS List

Access control lists define which packets should be forwarded or denied access to the network. QoS lists change the DSCP and 802.1p priority of routed packets according to the packet characteristics.

• Policy-based routing. The Branch Gateway features policy-based routing, which uses a policy list structure to implement a routing scheme based on traffic source, destination, type, and other characteristics. You can use policy-based routing lists (PBR lists) to determine the routing of packets that match the rules defined in the list. Common applications include separate routing for voice and data traffic, routing traffic originating from different sets of users through different Internet connections (Internet Service Providers), and defining backup routes for defined classes of traffic.

• RTP Header Compression. The Branch Gateway saves up to 60% of the bandwidth necessary using RTP compression. It also enhances the efficiency of voice transmission over the network by compressing the headers of Real Time Protocol (RTP) packets, thereby minimizing the overhead and the delays involved in RTP implementation.

• TCP Header Compression. The Branch Gateway uses Transmission Control Protocol (TCP) header compression to reduce the amount of bandwidth needed for non-voice data. TCP header compression can be applied either as part of RTP Header Compression via IPCH, or using the Van Jacobson method defined in RFC 1144.

• Inter-Gateway Alternate Routing (IGAR). The Branch Gateway uses IGAR as a means to use the PSTN as an alternative to the WAN interface under certain definable conditions. In providing an alternate routing mechanism, IGAR preserves the internal makeup of the call so that the call can be successfully terminated to its original internal destination.

---

**Data and Routing features**

The Branch Gateway has an internal router. You can configure the following routing features on the router:

*Note:*
Features labelled * are only available on IPv4.

- Interfaces*
- Routing table
- VPN
- GRE tunneling*
- DHCP and BOOTP relay*
- DHCP server
- DHCP client*
- Broadcast relay
• ARP table
• ICMP errors
• RIP*
• OSPF*
• Route redistribution
• VRRP*
• Fragmentation
• Static routes
• Policy-based routing*
• Distribution lists
• Dynamic IP addresses
• DNS resolver
• Unnumbered IP interfaces
• SYN cookies
• Keepalive packets
• Object tracking
• Backup interfaces
Chapter 5: Management, Security, Alarms and Troubleshooting

Management applications

Use any of the following applications to manage the Branch Gateway:

- Command Line Interface
- Branch Gateway Manager and Embedded Web Manager
- Avaya Integrated Management

Related topics:
- Branch Gateway Command Line Interface (CLI) on page 57
- Avaya Branch Gateway Manager and Embedded Web Manager on page 58
- Avaya Integrated Management on page 58

Branch Gateway Command Line Interface (CLI)

You can use the Branch Gateway CLI to configure the Branch Gateway and its media modules. The CLI is a textual command prompt interface. It is similar to the CLI of many other network devices.

You can access the CLI with any of the following:

Note:
Telnet and the Services port are supported on IPv4 only.

- Telnet through the network
- Telnet through dialup, using a dialup PPP network connection
**Note:**

Telnet is disabled by default on the Branch Gateway

- A console device connected to the Console port or Services port on the Branch Gateway front panel
- SSH (Secure Shell), which enables you to establish a secure remote session over the network, Services port, or dial in modem (PPP).
- SSH is enabled by default.

For information about each command in the CLI, see *Avaya Branch Gateway G450 CLI Reference*.

For information about how to use the CLI to perform specific configuration tasks, see *Administration for the Avaya Branch Gateway G450*.

### Avaya Branch Gateway Manager and Embedded Web Manager

**Note:**

Avaya management tools are supported in IPv4 only.

The Avaya Branch Gateway Manager is a web-enabled graphical administration tool for configuring a single Branch Gateway device. You can use the Gxxx Manager to configure the Branch Gateway chassis and media modules. You can also use it for status monitoring and troubleshooting. You can open Avaya Branch Gateway Manager in one of the following ways:

- From Avaya Integrated Management software
- From a web browser on a computer on the same network as the device

For information about Avaya Branch Gateway Manager, see the *Manager User Guide*.

### Avaya Integrated Management

Avaya Integrated Management offers a comprehensive set of web-based network and system management solutions that support Avaya converged voice solutions. You can use Avaya Integrated Management to monitor SNMP traps on the Branch Gateway. You can also use Avaya Integrated Management to access Avaya Gxxx Manager.
Management access security features

The Branch Gateway features the following management security mechanisms:

• A basic authentication mechanism in which users are assigned passwords and privilege levels
• Support for user authentication provided by an external RADIUS server
• SNMPv3 user authentication
• Secure data transfer via SSH and SCP with user authentication
• ASG authentication for remote service logins. ASG is a challenge-response authentication method that is more secure than password authentication and does not require a static password.

Network security features

The Branch Gateway provides the following network security features:

• Private secure connections can be configured between the Branch Gateway and a remote peer, using VPN (Virtual Private Network). VPN at the IP level is deployed using a standards-based set of protocols defined by the IETF called IPSec. IPSec provides privacy, integrity, and authenticity to information transferred across IP networks.
• Protection against DoS (Denial of Service) attacks via:
  - MSS notifications (IPv4 only). The Branch Gateway identifies predefined or custom-defined traffic patterns as suspected DoS attacks and generates SNMP notifications, referred to as Managed Security Services (MSS) notifications. MSS notifications are intercepted and, if certain conditions are met, may be forwarded to the Avaya Security Operations Center (SOC) as INADS alarms. The SOC is an Avaya service group that handles DoS alerts, responding as necessary to any DoS attack or related security issue.
  - SYN cookies, which protect against a well-known TCP/IP attack in which a malicious attacker targets a vulnerable device and effectively prevents it from establishing new TCP connections.

Alarms and troubleshooting features

The Branch Gateway has extensive features for error detection, alarms, and troubleshooting. Detailed diagnostic information and troubleshooting are provided by software-based solutions accessible by laptops in the field or remotely from an administrator’s computer. Administration
for the Avaya Branch Gateway G450 provides a comprehensive guide to configuring and using these solutions.

Related topics:

- Packet sniffing on page 60
- VoIP debugging using RTP-MIB on page 61

Front panel LEDs

LEDs on the front panel of the Branch Gateway and their media modules give a quick overall understanding of the health of the system and subsystems. When alarms or problems occur, LEDs indicate that a technician’s attention is needed.

Automatic error detection

During normal operations, software or firmware automatically detects and attempts to fix or circumvent error conditions. Errors are detected in two ways:

• Firmware on a system component during ongoing operations
• A “periodic test” or a “scheduled test” started by software

A technician can run more comprehensive tests on demand.

SNMP

⚠️ Note:

SNMP is supported on IPv4 only.

The Branch Gateway reports alarms using SNMP traps. The Branch Gateway fully supports SNMP versions SNMPv1 and SNMPv3.

Packet sniffing

The Branch Gateway features packet sniffing on IPv4 and IPv6. All IP and ARP packets that pass through the Branch Gateway are recorded. The recorded packets are stored in a file that
can be uploaded either to the S8xxx server or to a PC and read by Ethereal for troubleshooting purposes.

**VoIP debugging using RTP-MIB**

The Branch Gateway includes the RTP-MIB feature for debugging QoS-related problems across the VoIP network without any dedicated hardware. During each RTP stream, counters representing various QoS metrics increment whenever configured thresholds for the metrics are exceeded. A limited history of the QoS metric statistics is stored on the Branch Gateway for active and terminated RTP streams. Statistics can be displayed via the Branch Gateway CLI. In addition, the Branch Gateway can be configured to send SNMP traps to the SNMP trap manager on the S8xxx server at the termination of each RTP stream that has QoS problems. The traps are converted to syslog messages and stored for viewing in the messages file on the S8xxx server hard disk.
# G450 maximum Branch Gateway capacities

Chapter 7: Supported Avaya telephones

Supported Avaya telephones

Avaya Branch Gateways support various Avaya telephones, including IP, DCP digital, and analog telephones.

Avaya IP telephones

The Branch Gateway G450 supports all Avaya IP telephones, including the Avaya 1602, 1608, and 1616 H.323 IP phones.

Avaya DCP digital telephones

The DCP media modules supported by the Branch Gateway support the following DCP telephones:

- Avaya 1408 DCP Telephone
- Avaya 1416 DCP Telephone
- Avaya 2402 Digital Telephone
- Avaya 2410 Digital Telephone
- Avaya 2420 Digital Telephone
- Avaya 2490 DCP Speakphone
- Avaya 6402 and Avaya 6402D Digital Telephones
- Avaya 6408+ and Avaya 6408D+ Digital Telephones
- Avaya 6416D+ and 6416D+M Digital Telephone
- Avaya 6424D+ and 6424D+M Digital Telephone
- Avaya 8403 Digital Telephone
- Avaya 8405B and Avaya 8405D+ Digital Telephones
- Avaya 8410 and 8410D Digital Telephones
Supported Avaya telephones

• Avaya 8411D Digital Telephone
• Avaya 8434DX Digital Telephone
• IP softphones that are configured as “Road Warrior” and “Take Over” a DCP station
• Definity Extender – Analog single endpoint
• Definity Extender – ISDN single endpoint 302 series Attendant Console (302D)
• Avaya 603E Call Master III
• Avaya 603F Call Master IV
• Avaya 607A Call Master V
• Avaya 606B1 Call Master VI
• Avaya eConsole R1 (PC Console R3 with 8411 digital telephone)
• Avaya IP eConsole
• Avaya 9404 DCP Telephone
• Avaya 9408 DCP Telephone

Avaya analog telephones

The Branch Gateway supports the following Avaya analog telephones:

• Avaya 6210 Analog Telephone
• Avaya 6211 Analog Telephone
• Avaya 6218 Analog Telephone
• Avaya 6219 Analog Telephone
• Avaya 6220 Analog Telephone
• Avaya 6221 Analog Telephone
Chapter 8: Technical specifications

Technical specifications

The Branch Gateway technical specifications include physical dimensions and tolerances, power cord specifications, and media module specifications.

Specifications

The following table of technical specifications provides detailed information on the physical dimensions and tolerances.

Power cord specifications

For North America

The cord set must be UL Listed/CSA Certified, 16 AWG, 3-conductor (3rd wire ground), type SJT. One end is to be terminated to an IEC 60320, sheet C13 type connector rated 10A, 250V. The other end is to be terminated to either a NEMA 5-15P attachment plug for nominal 125V applications or a NEMA 6-15P attachment plug for nominal 250V applications.

For outside North America

The cord must be VDE Certified or Harmonized (HAR), rated 250V, 3-conductor (3rd wire ground), 1.0 mm² minimum conductor size. The cord is to be terminated at one end to a VDE Certified/CE Marked IEC 60320, sheet C13 type connector rated 10A, 250V and the other end to a 3-conductor grounding type attachment plug rated at a minimum of 10A, 250V and a configuration specific for the region/country in which it will be used. The attachment plug must bear the safety agency certifications mark(s) for the region/country of installation.
