Original publication date: 04-Dec-13. This is Issue #1, published date: 04-Dec-13. Severity/risk level High Urgency When convenient

Name of problem S8710 servers might have insufficient memory to run CM 5.2.1 SP 16 or later SPs.

Products affected

Avaya Aura® Communication Manager (CM), Releases 5.2.1

S8710 Server

Problem description

This problem occurs in Avaya Aura® Communication Manager (CM) Releases 5.2.1.

S8710 servers might have insufficient memory to run CM 5.2.1 Service Pack (SP) 16 (21060) or higher SPs. The memory requirements for these SPs are such that some S8710 servers might run out of memory when the SP is activated.

If a server runs out of memory after activating an SP it could cause ongoing resets/reboots.

Resolution

Upgrade to a server that has sufficient memory to support these higher SPs, such as Common Server Release 1 (DL360G7).

Workaround or alternative remediation

Do not activate CM 5.2.1 SP 16 (21060) or higher SPs on an S8710 server.

Remarks

n/a

Patch Notes

The information in this section concerns the patch, if any, recommended in the Resolution above.

Backup before applying the patch

Always

Download

Service Packs can be downloaded from "support.avaya.com". Custom patches must be provided by Avaya Support.

Patch install instructions

Service-interrupting?

Patch activation instructions are available on "support.avaya.com". CM Service Pack/patch activation is service impacting on non-duplicated servers, and on all servers running CM 5.2 and lower releases. For servers running CM 5.2.1 and higher releases, SPs/patches can be activated in a connection preserving manner.

Yes

Verification

Patch installation instructions include verification instructions.

Failure

Contact Technical Support.

Patch uninstall instructions

Patch activation instructions include deactivation instructions.

Security Notes
