Avaya Agile Communication Environment™ Release Notes
Notice

While reasonable efforts have been made to ensure that the information in this document is complete and accurate at the time of printing, Avaya assumes no liability for any errors. Avaya reserves the right to make changes and corrections to the information in this document without the obligation to notify any person or organization of such changes.

Documentation disclaimer

“Documentation” means information published by Avaya in varying mediums which may include product information, operating instructions and performance specifications that Avaya may generally make available to users of its products and Hosted Services. Documentation does not include marketing materials. Avaya shall not be responsible for any modifications, additions, or deletions to the original published version of documentation unless such modifications, additions, or deletions were performed by Avaya. End User agrees to indemnify and hold harmless Avaya, Avaya’s agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions, or deletions to this documentation, to the extent made by End User.

Link disclaimer

Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

Warranty

Avaya provides a limited warranty on Avaya hardware and software. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya’s standard warranty language, as well as information regarding support for this product while under warranty is available to Avaya customers and other parties through the Avaya Support website: http://support.avaya.com or such successor site as designated by Avaya. Please note that if You acquired the product(s) from an authorized Avaya Channel Partner outside of the United States and Canada, the warranty is provided to You by said Avaya Channel Partner and not by Avaya.

Licenses

THE SOFTWARE LICENSE TERMS AVAILABLE ON THE AVAYA WEBSITE, HTTP://SUPPORT.AVAYA.COM/LICENSEINFO OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, ARE APPLICABLE TO ANYONE WHO DOWNLOADS, USES AND/OR INSTALS AVAYA SOFTWARE, PURCHASED FROM AVAYA INC., ANY AVAYA AFFILIATE, OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE) UNDER A COMMERCIAL AGREEMENT WITH AVAYA OR AN AVAYA CHANNEL PARTNER. UNLESS OTHERWISE AGREED TO BY AVAYA IN WRITING, AVAYA DOES NOT EXTEND THIS LICENSE IF THE SOFTWARE WAS OBTAINED FROM ANYONE OTHER THAN AVAYA, AN AVAYA AFFILIATE OR AN AVAYA CHANNEL PARTNER; AVAYA RESERVES THE RIGHT TO TAKE LEGAL ACTION AGAINST YOU AND ANYONE ELSE USING OR SELLING THE SOFTWARE WITHOUT A LICENSE. BY INSTALLING, DOWNLOADING OR USING THE SOFTWARE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITIES FOR WHOM YOU ARE INSTALLING, DOWNLOADING OR USING THE SOFTWARE (HEREINAFTER REFERRED TO INTERCHANGEABLY AS “YOU” AND “END USER”), AGREE TO THESE TERMS AND CONDITIONS AND CREATE A BINDING CONTRACT BETWEEN YOU AND AVAYA INC. OR THE APPLICABLE AVAYA AFFILIATE (“AVAYA”).

Avaya grants You a license within the scope of the license types described below, with the exception of Heritage Nortel Software, for which the scope of the license is detailed below. Where the order documentation does not expressly identify a license type, the applicable license will be a Designated System License. The applicable number of licenses and units of capacity for which the license is granted will be one (1), unless a different number of licenses or units of capacity is specified in the documentation or other materials available to You. “Software” means computer programs in object code, provided by Avaya or an Avaya Channel Partner, working as stand-alone products, pre-installed on hardware products, and any upgrades, updates, patches, bug fixes, or modified versions thereto. “Designated Processor” means a single stand-alone computing device. “Server” means a Designated Processor that hosts a software application to be accessed by multiple users. “Instance” means a single copy of the Software executing at a particular time: (i) on one physical machine; or (ii) on one deployed software virtual machine (“VM”) or similar deployment.

License types

CPU License (CP): End User may install and use each copy or Instance of the Software on a number of Servers up to the number indicated in the order provided that the performance capacity of the Server(s) does not exceed the performance capacity specified for the Software. End User may not re-install or operate the Software on Server(s) with a larger performance capacity without Avaya’s prior consent and payment of an upgrade fee.

Named User License (NU). You may: (i) install and use the Software on a single Designated Processor or Server per authorized Named User (defined below); or (ii) install and use the Software on a Server so long as only authorized Named Users access and use the Software. “Named User”, means a user or device that has been expressly authorized by Avaya to access and use the Software. At Avaya’s sole discretion, a “Named User” may be, without limitation, designated by name, corporate function (e.g., webmaster or helpdesk), an e-mail or voice mail account in the name of a person or corporate function, or a directory entry in the administrative database utilized by the Software that permits one user to interface with the Software.

Heritage Nortel Software

“Heritage Nortel Software” means the software that was acquired by Avaya as part of its purchase of the Nortel Enterprise Solutions Business in December 2009. The Heritage Nortel Software currently available for license from Avaya is the software contained within the list of Heritage Nortel Products located at http://support.avaya.com/LicenseInfo under the link “Heritage Nortel Products” or such successor site as designated by Avaya. For Heritage Nortel Software, Avaya grants You a license to use Heritage Nortel Software provided hereunder solely to the extent of the authorized activation or authorized usage level, solely for the purpose specified in the Documentation, and solely as embedded in, for execution on, or for communication with Avaya equipment. Charges for Heritage Nortel Software may be based on extent of activation or use authorized as specified in an order or invoice.

Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Hosted Service, or software provided by Avaya. All content on this site, the documentation, Hosted Service, and the product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, in whole or in part, including any code and software unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, and or use without the express written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Third Party Components

“Third Party Components” mean certain software programs or portions thereof included in the Software or Hosted Service may contain software (including open source software) distributed under third party agreements (“Third Party Components”), which contain terms regarding the rights to use certain portions of the Software (“Third Party Terms”). As required, information regarding distributed Linux OS source code (for those products that have distributed Linux OS source code) and identifying the copyright holders of the Third Party Components and the Third Party Terms that apply is available in the products, Documentation or on Avaya’s website at: http://
Preventing Toll Fraud

“Toll Fraud” is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company’s behalf). Be aware that there can be a risk of Toll Fraud associated with your system and that, if Toll Fraud occurs, it can result in substantial additional charges for your telecommunications services.

Avaya Toll Fraud intervention

If you suspect that you are being victimized by Toll Fraud and you need technical assistance or support, call Technical Service Center Toll Fraud Intervention Hotline at +1-800-643-2353 for the United States and Canada. For additional support telephone numbers, see the Avaya Support website: http://support.avaya.com or such successor site as designated by Avaya. Suspected security vulnerabilities with Avaya products should be reported to Avaya by sending mail to: securityalerts@avaya.com.

Trademarks

The trademarks, logos and service marks ("Marks") displayed in this site, the Documentation, Hosted Service(s), and product(s) provided by Avaya are the registered or unregistered Marks of Avaya, its affiliates, or other third parties. Users are not permitted to use such Marks without prior written consent from Avaya or such third party which may own the Mark. Nothing contained in this site, the Documentation, Hosted Service(s) and product(s) should be construed as granting, by implication, estoppel, or otherwise, any license or right in and to the Marks without the express written permission of Avaya or the applicable third party.

Avaya is a registered trademark of Avaya Inc.
Avaya Aura is a registered trademark of Avaya Inc.
Avaya ACE is a registered trademark of Avaya Inc.

All non-Avaya trademarks are the property of their respective owners. Linux® is the registered trademark of Linus Torvalds in the U.S. and other countries.

Downloading Documentation

For the most current versions of Documentation, see the Avaya Support website: http://support.avaya.com, or such successor site as designated by Avaya.

Contact Avaya Support

See the Avaya Support website: http://support.avaya.com for product or Hosted Service notices and articles, or to report a problem with your Avaya product or Hosted Service. For a list of support telephone numbers and contact addresses, go to the Avaya Support website: http://support.avaya.com (or such successor site as designated by Avaya), scroll to the bottom of the page, and select Contact Avaya Support.

  Unreliable certificate management ............................................................................................. 31  
Chapter 12: Third Party Call considerations .................................................................................. 33  
  Third Party Call v2 and v3 do not support the whitespace character for the called party and second participant in the URI for WSDL requests ...................................................................... 33  
  Display on the Calling and Called Party devices is incorrect when a TPC v2 call is initiated from ACE ........................................................................................................................................... 34
Chapter 13: Third Party Call Extensions considerations

- Single step transfer operation on JTAPI provider in ACE succeeds but throws exceptions in the log.
- endCall does not clear all parties in a conference when the consultCall is made with conferenceOnly option.
- Missing notification events during singleStepTransfer

Chapter 14: Call Notification considerations

- Third Party Call Extensions (v2.0) related Call Notifications (v3.8) for interprovider calls have improper Called Party URI.
- Call Notifications (v3.8) for interprovider calls will have calling party appended with "phone-context=dialstring".
- ACE sends Disconnect notification to listener when Busy on a call.
- TPCv2 and Call Notification v3.8 have issues when forwarded DN is busy on Aura TR/87 and SIP one-X clients.
- Unreachable event not received when called party is unreachable in Session ID based Call Notification v3.8.
- Call ID Participant based Call notifications contain multiple participant entries for PSTN numbers.
- Duplicate notifications received when using H.323 clients in singleStepTransfer.
- Call Notification clients do not receive No Answer events when a call to a transferredTo party times out.
- Wrong notification in a call forward scenario, Not Reachable instead of Busy notification.

Chapter 15: Call Forwarding considerations

- Incomplete notifications for Call forwarding or redirectCall.

Chapter 16: Presence considerations

Chapter 17: Endpoint display considerations

- Calling party phone does not display called party number in a TPCv2 makeCall.

Chapter 18: Foundation Toolkit considerations

- B2B Routing call fails when the calling and called party are sequenced to AAFT and CM.

Chapter 19: Avaya Aura® service provider considerations

- Avaya clients do not play Busy tone when a third party call is made to a busy line.
- SIP calls fail when AAFT and AURA SIP providers are both provisioned.
- Incorrect phone display when receiving call from thirdPartyCallController in a TPCv2/v3 makeCall.
- First call after a CTI link has been restored always fails when the call is made from Browser add-in.
- Call forwarding and redirectCall have issues when using H.323 clients.

Chapter 20: CS 1000 service provider considerations

- No busy notification for a network initiated call to a monitored DN on a CS 1000 TR/87 provider.
- Failed to CallSender when ACE SIP Interface makecall from CS1K set to MM then CallSender to BCM set.
- Multiple transfers on a CS1000 provider results in inconsistent behavior.
Chapter 1: Introduction

This Release Notes document provides a brief description of operational considerations for Avaya Agile Communication Environment™ Release 6.2.x
Chapter 2: Avaya ACE GA load

Avaya ACE GA load

Download the Avaya ACE Release 6.2.3 files from the following locations:

- Confluence: https://confluence.forge.avaya.com/display/ACE/Download+Generally+Available
- PLDS:
  - ACE0000000036 - ACE Core 6.2 SP (6.2.3) - LINUX OS
  - ACE000000044 - ACE Core 6.2 SP (6.2.3) - WASND 8.0.0.5 V3 tar.gz
  - ACE000000045 - ACE Core 6.2 SP (6.2.3) - IBM WAS for upgrade from 6.2 to 6.2.3
  - ACE000000046 - ACE Core 6.2 SP (6.2.3) - AMS (Media Server) load
  - ACE000000047 - ACE Core 6.2 SP (6.2.3) - Bare Metal (Non Virtual) tar.gz
  - ACE000000048 - ACE Core 6.2 SP (6.2.3) - Bare Metal (Non Virtual) iso
  - ACE000000049 - ACE Core 6.2 SP (6.2.3) - VE load (ova)
Chapter 3: Software load lineup

The following Avaya ACE Release 6.2.3 application and related software are available as iso images and tar files:

- Red Hat Enterprise Linux 6.0
- Avaya ACE Software and Installation Tools 6.2.3
- IBM WebSphere 8.0.0.5 V3
- Avaya Aura® Media Server (MS) 7.5.0.1299
- Avaya ACE upgrade software
- IBM Websphere upgrade software

*Note:*

The Websphere upgrade software is only available as a tar file.

You can download the above files from the Avaya support site at [http://support.avaya.com/](http://support.avaya.com/).

</tbody>
</table>
Note:

When you upgrade from Release 3.0 to Release 6.2.3, you must first migrate from 3.0 to 6.2.1, and then upgrade to 6.2.3.
Chapter 5: Upgrades and Migration to 6.2.3

Migrating to Avaya ACE release 6.2.3

About this task
Perform the following procedure to migrate from previous releases to Avaya ACE release 6.2.3

Procedure
1. Login to the Avaya ACE host.
2. Type `cd /opt/avaya/ace/bin` to change directories.
3. Initiate a backup. Do one of the following:
   - To create a backup using the default location settings, type `. /ACE_backup.sh -a`.
   - To create a backup and specify the location, type `. /ACE_backup.sh`
4. If you chose to specify a location for the backup, enter the path to the location where you want to store the backup files.
5. At the prompt, enter the database user name.
   The default database user name is the root database user. If you type any other name, ensure that the user has backup privileges.
6. At the prompt, type the database user password.
   The backup process starts after you enter the password.
7. Use WinSCP or a similar tool to transfer the backup to a remote location.
9. Deploy the Avaya ACE 6.2.3 VM.
10. Copy the backup file from the remote location to the new ACE VM.
11. Type `cd /opt/avaya/ace/bin` to change directories.
12. Type `. /migrate62to623Vm.sh` to migrate the data.
    Provide the backup file as the input.
Upgrading Avaya ACE from release 6.2.0 to release 6.2.3

Procedure

1. Login to the Avaya ACE host.
2. Copy the ACE-<new_version>.tar.gz file to the Avaya ACE host directory, /opt/avaya.
3. Type cd/opt/avaya to change the directory.
4. Type tar -zxvf ACE<new_version>.tar.gz to untar the Avaya ACE file.
5. Download the WebSphere upgrade software ACE-WASND-8.0.0.5_Upgrade_V3.tar.gz.
6. Create the directory /opt/avaya/was to store the WebSphere upgrade software.
7. Type mkdir was.
8. Transfer the downloaded upgrade file to the /opt/avaya/was directory.
9. Type cd was to change directories.
10. Type tar -xvf ACE-WASND-8.0.0.5_Upgrade_V3.tar.gz to untar the WebSphere files.
11. Type cd /opt/avaya/ace-6.2.3/install to change directories.

Note:

For High Availability deployments, untar the Avaya ACE file on both Host A and Host B.

12. Type ./upgrade.sh to run the upgrade script.

   The system displays messages as the upgrade procedure proceeds. To see the Avaya ACE upgrade log file, go to /var/avaya/ace/log/install/ACE_install.log.

Upgrading Avaya ACE from release 6.2.1 or 6.2.2 to release 6.2.3

Procedure

1. Login to the Avaya ACE host.
2. Copy the ACE-<new_version>.tar.gz file to the Avaya ACE host directory, /opt/avaya.
3. Type cd/opt/avaya to change the directory.
4. Type tar -zxvf ACE<new_version>.tar.gz to untar the Avaya ACE file.
Note:
For High Availability deployments, untar the Avaya ACE file on both Host A and Host B.

5. Type `/opt/avaya/ace-6.2.1/install` or `/opt/avaya/ace-6.2.2/install`.

6. Type `./upgrade.sh` to run the upgrade script.

   The system displays messages as the upgrade procedure proceeds. To see the Avaya ACE upgrade log file, go to `/var/avaya/ace/log/install/ACE_install.log`. 
Chapter 6: Issues resolved in release 6.2

The following issues, identified in the Release 3.0.2 Release Notes, have been resolved in Release 6.2.

Chapter 7: Capacity and traffic considerations

Related Links
- Capacity model considerations on page 18
- Avaya ACE capacity considerations on page 19
- Avaya ACE Foundation Toolkit capacity considerations on page 19
- Avaya ACE Service Provider capacity considerations on page 19
- Avaya ACE application capacity considerations on page 20

Capacity model considerations

Determining the Avaya ACE system capacity model is based on the following:

- Number of devices that will be integrated with Avaya ACE for each user (for example, telephone, video device, soft clients)
- Number of users integrated with Avaya ACE
- What the users are doing which would require Avaya ACE resources
- How often they are doing it
- Capacity of the communication network

Actual traffic rates may vary depending on the type of hardware and operating system Avaya ACE is installed on, network conditions and other non-ACE related applications running on the Avaya ACE server. A typical Avaya ACE deployment with 15000 Avaya ACE users using ThirdPartyCall (v2), Presence and Call Notification (v2.3) with a 2-3 minute call duration can expect their traffic capacity to fall in the 6-15 calls per second range. Each Avaya ACE deployment should work with Avaya Professional Services (APS) to have an architect identify the addressable capacity for the deployment.

Related Links
- Capacity and traffic considerations on page 18
Avaya ACE capacity considerations

Avaya ACE can support a maximum of 45,000 SIP subscriptions (these are consumed by either SIP SUBSCRIBE or SIP REFER transactions) and 30,000 SIP call legs (these are consumed by SIP INVITE transactions and released by SIP BYE transactions). These limitations are used to determine how many SIP/TR87 contacts an Avaya ACE user can have and how many concurrent SIP calls can be made.

Avaya ACE on VMware capacity considerations

Avaya ACE on VMware supports a maximum of 15000 users with call rate of 18 call per second where each call consists of make call session, presence update and a call notification.

Related Links
Capacity and traffic considerations on page 18

Avaya ACE Foundation Toolkit capacity considerations

Foundation Toolkit supports a call rate of 20 calls per second.

Related Links
Capacity and traffic considerations on page 18

Avaya ACE Service Provider capacity considerations

SIP B2BUA

The maximum verified sustainable rate of Avaya ACE-initiated SIP B2BUA calls is 18 calls per second with 15,000 Avaya ACE users using the ThirdPartyCall (v2) web service or ThirdPartyCall (v3) web service with sufficient media server capacity and an average call duration of 3 minutes.

TR87 (CTI)

The maximum verified sustainable rate of Avaya ACE-initiated TR87 (CTI) calls is 18 calls per second with 15,000 Avaya ACE users using ThirdPartyCall (v2), Presence and Call Notification (v3.2 or v3.8) web services and an average call duration of 3 minutes.

JTAPI

The maximum verified sustainable rate of Avaya ACE-initiated calls is 6 calls per second on JTAPI (all service providers combined) per Avaya ACE server with 5000 Avaya ACE users using Third Party Call (v2) and Third Party Call extensions (v2) web services and an average call duration of 3 minutes.
Cisco Unified Communication Manager using AXL

The maximum verified sustainable rate of Avaya ACE-initiated AXL calls is 18 calls per second per Avaya ACE server with 15,000 Avaya ACE users using the Call Forward web services and average call duration of 3 minutes.

Avaya NES Contact Center

The maximum verified sustainable rate of Avaya ACE-initiated calls is 3 calls per second on the Avaya NES Contact Center using Third Party Call (v2), Call History and Call Notification (v3.8) web services using 5000 Avaya ACE-users with average call duration of 3 minutes.

---

Avaya ACE application capacity considerations

Message Drop and Message Blast

The Message Blast traffic rate is one call per second, with a maximum of 180 concurrent blast participants and a call duration of three minutes.

Click-to-Dial with Message Drop, Message Drop and Leave:

- 4 Click-to-Dials per second, where 0.5 calls per second is a Message Drop, 1.5 calls per second is a Message Drop & Leave and the call duration is 2.5 minutes.

- The traffic mixture for this model is:
  - CS 1000 Click-to-Dial: one call per second, where 0.25 calls per second is a Message Drop and 0.25 calls per second is a Message Drop and Leave.
  - Avaya Aura Click-to-Dial: 1 call per second call, where 0.25 calls per second is a Message Drop and 0.25 calls per second is a Message Drop & Leave.
  - Turret Click-to-Dial: 2 calls per second, where 1.0 call per second is a Message Drop & Leave.

Chapter 8: Documentation considerations

The Avaya Agile Communication Environment™ (ACE) software ships with the documentation available when the software is built. The following documents have been updated for the official ship date of Avaya ACE™ release 6.2.

- Avaya Agile Communication Environment™ Overview and Specification
- Avaya Agile Communication Environment™ Planning and Installation (NN10850-004)
- Avaya Agile Communication Environment™ Web Services (NN10850-007)
- Avaya Agile Communication Environment™ Troubleshooting (NN10850-026)

The following documents have been added:

- Avaya Agile Communication Environment™ User and Security Administration (NN10850-010)

The following document has been renamed:

from Avaya Agile Communication Environment™ Administration (NN10850-005)
to Avaya Agile Communication Environment™ Service Provider Administration (NN10850-005)

Updated documents can be identified by the issue number on the front cover, located after the document number. The second number indicates how many times the document has been reissued within a software release. For example, the original document is labelled XX.01. The second issue is labelled XX.02.

Current documents can be obtained from the Avaya support site at https://support.avaya.com. See Downloading ACE documents from support site on page 21.

---

**Downloading ACE documents from support site**

Use the following procedure to download ACE documents from the Avaya support site.

**Procedure**

2. Click **Downloads & Documents**.

3. Enter *Avaya Agile Communication Environment* in the **Enter Your Product Here** field.

4. In the **Choose Release** drop down menu, select the release.

5. In the **Select the content type** section, select **Documents** and click **Enter**.

6. In the resultant page, do one of the following:
   - Filter the documents displayed based on the type of document you require. To filter, select the type of document you want from the list.
   - Click **Select All** to display all the documents pertaining to the release.

7. From the documents displayed, click the document you want.

Avaya ACE installer claims a port is in use when it is not

While Installing ACE, the installer displays an error message stating that a specific port is already in use and the installation fails even though the port is free. This happens if the ACE server has a connection established with a remote server and the remote server port matches with the specific port used by ACE.

Expected result:
Installation should not fail as the port is used on the remote server and not the ACE server.

Actual result:
Installation fails with the error that a specific port is already in use.

Tracking number
ACECORE-12885/ACE-11687

Impact
ACE cannot be installed if some port needed by ACE is used by any remote server to connect to ACE server.
Workaround
1. Reboot the ACE server.
2. Run the command: `netstat -nat | grep port`
   Ensure that the command returns no entries. This implies that the port is not assigned to any other service.
3. Restart the installation.

Related Links
Installation and deployment considerations on page 23

Certificate configuration is not updated on Upgrade to 6.2.1

Tracking number
ACE-12530

Description
Applicable when you upgrade from ACE 6.2.0 or ACE-6.2.1-SNAPSHOT to ACE 6.2.1. After the upgrade is completed, user-provisioned certificates from the previous release are not used. This is applicable for System Manager certificates and for self-signed certificates.

Impact
Service providers using certificates will go OOS after upgrade.

Workaround
1. Run the `/opt/IBM/WebSphere/AppServer/profiles/AppSrv01/bin/wsadmin.sh -user <was_admin_username> -password <was_admin_password> -f/opt/avaya/ace/bin/modifySSLConfig.py <host_type> <certificate_alias>` command in the Linux console of your ACE machine.

Here, `was_admin_username` is the IBM Websphere admin user name,
`was_admin_password` is the password for the IBM Websphere admin user
`host_type` is the Avaya ACE host type, as present in /etc/host_type
`certificate_alias` is the alias of the certificate to be used. The certificate is present in CellDefaultKeyStore. To view the certificates, on IBM Websphere GUI navigate to Security > SSL Certificate, Key Management > Key Stores, and Certificates > CellDefaultKeyStore > Personal certificates.

* Note:
If you have configured the AAFT service provider, delete, and reconfigure the certificate from the Avaya ACE GUI.

Installation and deployment considerations on page 23
ACE Server loses connectivity to Session Manager

Description
The ACE SIP component loses connectivity to Session Manager, though this is not propagated back. An alarm is not raised on ACE OAM. The SIP container threads go into a dead lock. This scenario occurs when ACE connects to CS1k through Session Manager, which acts as a proxy.

Tracking number
ACE-12319

Impact
All applications using an ACE SIP provider will not be able to make any call related operation.

Workaround
You must install an additional IBM Websphere Application server patch. You must perform the following procedure post installation, post upgrade, and post an inrelease upgrade.

1. Download WASPatch621v3.tar.gz from PLDS. The ID is ACE000000039.
2. Create the /opt/avaya/was directory using the mkdir /opt/avaya/was command. Upload WASPatch621v3.tar.gz to this location.
3. Type the tar -xvf WASPatch621v3.tar.gz command to explode the tarball.
4. Type the ./installPatch6.2.1.sh command to install the patch.

You must apply this patch to both the standalone and high-available deployments. For high availability scenarios, you must apply the patch to Node A and then Node B.

Installation and deployment considerations on page 23

Configuring NMS locations

Description
While configuring NMS locations, non-numeric characters are accepted for Port Number.

Tracking number
ACE-12529

Impact
While configuring NMS locations, non-numeric characters are accepted for Port Number and notifications are not sent to the NMS locations

Workaround
None. You must enter a numeric value for NMS port number.

Related Links
Installation and deployment considerations on page 23
IWA configuration fails when you backup and migrate from ACE VE 6.2 to 6.2.1

Description
IWA configuration fails when you backup and migrate from ACE VE 6.2, in which IWA is configured, to 6.2.1.

Tracking number
ACE-12532

Impact
When you upgrade from ACE VE 6.2, in which IWA is configured, to 6.2.1, the keytab file is not present in the backup file. As a result, IWA configuration fails.

Workaround
- Ensure that you backup the keytab file. Transfer the keytab file to a local computer before you power off the 6.2 virtual machine.
- Deploy the 6.2.1 OVA file.
- Transfer the keytab file from the local computer to the 6.2.1 OVA. Copy the keytab file at the same location as before.
- Upgrade to ACE 6.2.1.

Applying the post installation patch

Note:
The following procedure is applicable only for users with Israel Daylight Saving Time.

About this task
You must perform the following procedure after you install or upgrade Agile Communication Environment™ 6.2.1.

To install Israel Daylight Saving Time settings on ACE 6.2.x, an additional RHEL rpm is required. You must also update the Java version.

Procedure
1. Download ACE_DST_Updatev1.tar.gz from PLDS. The ID is ACE000000040.
2. Create the /opt/avaya/dst directory, type the mkdir command.
3. Upload ACE_DST_Updatev1.tar.gz to /opt/avaya/dst.
4. Type the tar -xvf ACE_DST_Updatev1.tar.gz command to explode the tarball.
5. Download \textit{jtzu-1.6.13d.zip} from \url{http://www.ibm.com/developerworks/java/jdk/dst/jtzu.html}.

6. Copy the zip file to \texttt{/opt/avaya/dst/ACE_DST_Updatev1} and type the \texttt{unzip jtzu-1.6.13d.zip} command to unzip \texttt{jtzu-1.6.13d.zip}.

7. Type the \texttt{cd /opt/avaya/dst/ACE_DST_Updatev1} command to change the directory.

8. Type the \texttt{./UpgradeACEDSTv1.sh} command to install the DST patch.

\textbf{Note:} You must apply this patch to both standalone and high-available deployments. For high availability deployment, you must apply the patch to Node A and then Node B.

---

\textbf{Applying patch to prevent the Shellshock security threat}

\textbf{About this task}
You must perform this task to prevent the security threat posed by Shellshock Bash injection.

\textbf{Note:} You must apply this patch to both the standalone and high-available deployments. For high availability deployments, you must apply the patch to Node A and then to Node B.

\textbf{Procedure}
\begin{enumerate}
  \item Download \texttt{ACEShellShockFix.tar.gz} from the PLDS website.

  The ID is \texttt{ACE000000050}.

  \item Login to the Agile Communication Environment™ terminal by using PUTTY or a similar software.

  \item Do one of the following:

  \begin{itemize}
    \item Use sysadmin credentials to login to root, and enter \texttt{su -}.
    \item If you do not use sysadmin credentials, login to the terminal using root credentials.
  \end{itemize}

  \item Go to \texttt{cd /opt/avaya}.

  \item Upload the Agile Communication Environment™ tar ball to \texttt{cd /opt/avaya}.

  Use WinSCP or a similar client to upload the file.

  \item Run the \texttt{tar -xvf ACEShellShockFix.tar.gz} command.

  \item Go to \texttt{cd /opt/avaya/ACEShellShockFix}.

  \item Run the \texttt{./fixShellShock.sh} command.
\end{enumerate}

Chapter 10: Provisioning considerations

This section contains information about known issues related to Avaya Agile Communication Environment™ (ACE) provisioning.

Related Links
- Some SIP interfaces do not use ssl on page 29
- Unable to edit provider on Avaya ACE GUI on page 30

Some SIP interfaces do not use ssl

Currently some of the SIP interfaces on ACE do not use secure signaling.

The requirement for using secure signaling is applicable for the AS5300 and CS2100 network elements that ACE interfaces with.

It is not applicable to the Cisco Unified Communications Manager since it is not an Avaya product.

Tracking number
ACECORE-13417/ACE-11717

Impact
You cannot add a white space character in the URI request for the following parameters:
- called party parameter of a Third party Call (v2)
- second participant of a Third Party Call (v3)

Workaround
None

Related Links
- Provisioning considerations on page 29
Unable to edit provider on Avaya ACE GUI

After posting the list of provisioned ACE service providers, unable to edit provider on Avaya ACE GUI by clicking the enabled Edit button, regardless of whether the provider status is In Service or Disabled.

In addition, after posting the edit page for some providers, the Update button on said page is enabled despite not having the ability to edit any settings.

Tracking number
ACECORE-12988/ACE-11595

Impact
The user thinks he can update the provider configuration but some provider configuration fields are not editable. This would misleading for user.

Workaround
None

Related Links
Provisioning considerations on page 29
Chapter 11: Avaya ACE GUI and OAM considerations

There are no known issues related to Avaya Agile Communication Environment™ (ACE) graphical user interface (GUI) and operations, administration, and maintenance (OAM) tasks performed using the ACE GUI.

Related Links
- Provisioning of provider in OAMP on Google Chrome does not work on page 31
- Unreliable certificate management on page 31

Provisioning of provider in OAMP on Google Chrome does not work

Although the provisioning of a provider (AURA - SIP TLS) on the oamp is successful, the provider does not appear on OAM.

Tracking number
ACECORE-13289/ACE-11532

Impact
None.

Workaround
None. Google Chrome is not a supported browser. For a list of supported browsers, see, Avaya Agile Communication Environment™ Planning and Installation (NN10850–004).

Related Links
- Avaya ACE GUI and OAM considerations on page 31

Unreliable certificate management

ACE OAMP (GUI) became inaccessible after a certificate deletion from the GUI.
Scenario:
- Administrator logs on to ACE console via https://<ip_or_fqdn>:9449/oamp>
- Navigates to Security > Certificate management > System Manager Certificates.
- Clicks Delete on the page.

Result:
Page goes inaccessible

Tracking Number
ACE-11659

Impact
Administrator will not be able to use the Operation and Management console of ACE.

Workaround
Perform the following steps:
1. Connect to terminal session of the ACE machine. For example, through a PuTTY session.
2. Enter the credentials.
3. Type the following commands:
   a. cd /opt/avaya/ace/bin
   b. ./deleteCertificates.sh <was_admin_id> <was_admin_password>

   Where, was_admin_id is the Websphere administrator user name and was_admin_password is the associated password.

   The above shell script displays success message on the console.

   Key output statements to be looked at on the console are:
   - ACE ssl configuration is modified to default
   - SMGR CA certificate and SMGR personal certificate are deleted

Chapter 12: Third Party Call considerations

This section contains information about known issues related to Avaya Agile Communication Environment™ (ACE) Third Party Call web service.

Related Links
Third Party Call v2 and v3 do not support the whitespace character for the called party and second participant in the URI for WSDL requests on page 33
Display on the Calling and Called Party devices is incorrect when a TPC v2 call is initiated from ACE on page 34

Third Party Call v2 and v3 do not support the whitespace character for the called party and second participant in the URI for WSDL requests

For the called party in Third Party Call v2 and the second participant in Third Party Call v3, having a %20 (whitespace) in the URI will cause the URI to be recognized as invalid. For example:
<loc:calledParty>sip:steve@avaya.com?user=dave%20lee</loc:calledParty>

Tracking number
ACECORE-7030/ACE-11633

Impact
Customers will currently be unable to have whitespace for called party in Third Party Call v2 and second participant in Third Party Call v3 in the URI for WSDL requests.

Workaround
No workaround at this time.

Related Links
Third Party Call considerations on page 33
Display on the Calling and Called Party devices is incorrect when a TPC v2 call is initiated from ACE

Tracking number
ACE-11516

Impact
The display on the Calling and Called Party devices is incorrect when a TPC v2 call is initiated from ACE. This is applicable for the TR/87 provider using AES / CS1K configuration.

This issue affects:
• Calls between SIP client to H.323 client. Here, only the SIP client has the issue.
• Call forward, redirect, consult & single step transfer scenarios as well.

This issue does not affect:
• Calls between a H.323 client to a SIP client
• Calls between two H.323 clients
• TPCv2 makeCall (H.323 to H.323) scenarios

Workaround
None

This section contains information about known issues related to Avaya Agile Communication Environment™ (ACE) Third Party Call Extensions web service.

Related Links
- Single step transfer operation on JTAPI provider in ACE succeeds but throws exceptions in the log on page 35
- endCall does not clear all parties in a conference when the consultCall is made with conferenceOnly option on page 36
- Missing notification events during singleStepTransfer on page 36

---

Single step transfer operation on JTAPI provider in ACE succeeds but throws exceptions in the log

Scenario:
Set up CCM JTAPI service provider
Make Call from A to B, send Answer Call on B
Single Step Transfer B to C
all operations work, but exception is thrown in cmf/JtapiCcm.log

Tracking number
ACECORE-13293

Impact
There is no functionality impact but exception gets printed in the log.

Workaround
None

Related Links
- Third Party Call Extensions considerations on page 35
endCall does not clear all parties in a conference when the consultCall is made with conferenceOnly option

In a consultCall operation using conferenceOnly as the consultOption with stations A, B and C. A - CS1k, B - Aura SIP, C - Aura SIP.

ACE endCall does not clear all parties in the conference, leaving A and C still on call.

Scenario:
Perform the TPCv2 operation, makeCall, between Party A(CS1k) and Party B(Aura) (CallID 1) using ACE.
Perform the TPCExtensions operation, consultTransfer with conferenceOnly from Party B(Aura) to Party C(Aura) (CallID 2)
Perform the TPCExtensions operation, consultComplete
Perform endCall(CallID 1)

Tracking number
ACECORE-13400/ACE-11572

Impact
Applications using ACE consultTransfer or consultComplete using a CS1k DN as the Calling party will see two parties still on call (A and C) after using ACE endCall.

Workaround
None

Related Links
Third Party Call Extensions considerations on page 35

Missing notification events during singleStepTransfer

Setup:
- Configure Aura TR87 service provider for singleStepTransfer and for callID-based notifications
- Configure CS1000 v2 SIP service provider for TPCv2 makeCall
- H.323 endpoints: DN2, DN3
- CS1000 endpoint: DN1
- Make TPCv2 makeCall between DN1 and DN2 and start callID based notifications startCallNotification
- Answer DN2 -Do consultationCall (DN2 to DN3), do not answer DN3
• Do consultationComplete, do not answer DN3
• Do an endCall using the callID from notification event for DN2

Expected result:
After endCall, entire call should be terminated and there should be no active call on DN1, DN2 and DN3

Actual result:
Call is terminated on DN1 but call is still active between DN2 and DN3. When DN2 is hung up DN3 still rings.

Tracking number
ACECORE-13315/ACE-4

Impact
The endCall operation does not terminate the entire call.

Workaround
Manually disconnect the call from the phone.

---

Third Party Call Extensions (v2.0) related Call Notifications (v3.8) for interprovider calls have improper Called Party URI

Call Notifications regarding TPCV2 Extension services (ConsultCall, CallForward and SingleStepTransfer) have HLOC prefixed to called party number and missing URI scheme (tel).

**Tracking number**

ACECORE-6295/ACE-11774

**Impact**

For inter provider calls, ConsultCall, CallForward and SingleStepTransfer operations fail.
Call Notifications (v3.8) for interprovider calls will have calling party appended with “phone-context=dialstring"

When subscribing for notifications (DN based or callid based) using the default address direction Called, the calling party notifications have ";phone-context=dialstring" appended to the URI.

Tracking number
ACECORE-6294/ACE-11886

Impact
Call Notification (v3.8) display contains extra characters.

Workaround
No workaround at this time.

Related Links
Call Notification considerations on page 38

ACE sends Disconnect notification to listener when Busy on a call

When a call is made to a DN which is Busy (already in another call), Busy followed by Disconnect notifications are sent to the calling party listener. However, after about 25 seconds a Disconnect notification is also sent for the called party listener even though that party never entered the call. This Disconnect event has the call ID of the failed call.

Tracking number
ACE-11684

Comments on this document? infodev@avaya.com
Impact
The application listening to events on the called party might be confused with the unexpected Disconnect event and might consider it to be a Disconnect for the ongoing call.

Workaround
Applications should consider the call ID field along with the type of event.

Related Links
Call Notification considerations on page 38

TPCv2 and Call Notification v3.8 have issues when forwarded DN is busy on Aura TR/87 and SIP one-X clients

In a CallForward scenario with Party B forwarded to Party C with Call Notification subscriptions to all parties, when an ACE makeCall is made between Part A and Party B, getCallInformation reports CallingPartyBusy as the Call termination reason.

Tracking number
ACECORE-12399/ACE-11519

Impact
Application listeners trying to verify the status of the call will receive wrong notifications about the status of Party A.

Workaround
None

**Duplicate notifications received when using H.323 clients in singleStepTransfer**

In an Aura TR/87 ACE call with **singleStepTransfer** and CallId based notifications, after **singleStepTransfer**, there is a set of duplicate notifications sent to the client, with the new **participant**(transferred-to) as **CallParticipantInitial**.

**Scenario:**
Third Party Call v2**makeCall** (A(Aura) to B(Aura))
**startCallNotification** (addresses: callId, criteria: Participant)
Make sure call is connected
**singleStepTransfer** (B to C)
Make sure call is connected
**endCall**

**stopCallNotification**

**Tracking number**
ACECORE-13308/ACE-11675

**Impact**
Client application listeners will see a set of duplicate notifications when Party C rings.

**Workaround**
No work around yet.
Applications can have a logic to ignore events if they are the same as the one received previously.

**Call Notification clients do not receive No Answer events when a call to a transferredTo party times out**

In a single step transfer call scenario, where A calls B, B transfers the call to C, and the call times out, the notification listener against party A does not get the No Answer event when the call times out.

**Tracking Number**
ACE-12553

**Impact**
ACE call notification clients on single step transfer event calls.

**Workaround**
None

**Wrong notification in a call forward scenario, Not Reachable instead of Busy notification**

In a Call Forward - MakeCall scenario, party A calls Party B, and B has set call forward to Party C. If Party C is busy on all lines, the notification ACE sends is Not Reachable instead of Busy.
Wrong notification in a call forward scenario, Not Reachable instead of Busy notification

Tracking Number
ACE-12542

Impact
ACE call notification clients who receive *Busy* notification.

Workaround
None

Chapter 15: Call Forwarding considerations

This section contains information about known issues related to Avaya Agile Communication Environment™ (ACE) Call Forwarding web service.

Related Links
Incomplete notifications for Call forwarding or redirectCall on page 44

Incomplete notifications for Call forwarding or redirectCall

Call ID based notifications for the call forwarded or redirected SIP calls are not supported. This means that the notification events will not contain the forwarded To party information.

Tracking number
ACECORE-13187/ACE-11570

Impact
Any SIP call forwarded calls subscribing for call-id based notifications will not get the forwarded To party information in the Call notification events.

For example:
• DN2 has set call forward or redirect to DN3
• DN1 calls DN2

Call notification events contain DN2 instead of DN3 that answered the call.

Note:
Avaya ACE does not support Call forwarding for SIP providers. The scenario mentioned here is when the Call Forwarding is done at the PBX level itself. For more information on services supported by various service providers, see Tables of Avaya ACE supported services by service provider type in Avaya Agile Communication Environment™ Web Services (NN10850–007).

Work around
None.

Calling party phone does not display called party number in a TPCv2 makeCall

In an Aura TR/87 ACE makeCall between a CS1k DN (Calling party) and Aura DN (Called party), the display of Calling Party (CS1k) does not get updated properly.

Scenario:
makeCall from A (CS1k) to B (Aura), make sure call is connected.
endcall

Tracking number
ACECORE-13258/ACE-11716

Impact
Calling party phone does not display the called party number in ringing and connected state.

Workaround
None

- B2B Routing call fails when the calling and called party are sequenced to AAFT and CM on page 47

B2B Routing call fails when the calling and called party are sequenced to AAFT and CM

User setup:

- calling party originating sequence: aaft client app + CM
- calling party terminating sequence: CM
- called party originating sequence: CM
- called party terminating sequence: CM + aaft client app

AAFT client application uses B2B routing service.

When calling party calls called party, it gets a busy signal, or the call is setup briefly, then terminated.

Tracking number

ACECORE-10586/ACE-11601

Impact

The MAS media server does not support appending to a recording and therefore, this functionality cannot be exercised using the Foundation Toolkit API.

Avaya clients do not play Busy tone when a third party call is made to a busy line

Avaya clients do not play busy tone when a Third Party Call is established to a busy terminating line. This issue only affects Avaya service providers configured to use the "Invite;Answer;Refer" Make Call Sequence. Scenarios in which the terminating side of the call provides in-band busy treatment will also be unaffected.

Tracking number
ACECORE-4933/ACE-11631

Impact
The problem manifests as follows:

- Third Party Call is initiated through Avaya ACE, between an Avaya client and a busy subscriber.

- The originating Avaya client rings and the originating user answers. Call immediately drops and the originating client's display goes to an idle state, with no destination busy notification presented to the user.

- Desired behavior is that the Avaya client should present busy treatment to the user, in the form of a busy tone and optionally a message on the Avaya client's screen.
SIP calls fail when AAFT and AURA SIP providers are both provisioned

SIP calls fail with Indeterminate originating entity error when AAFT and AURA SIP providers are both provisioned.

Tracking number
ACECORE-12641/ACE-11636

Impact
Network initiated SIP calls will fail for Aura SIP provider when an Aura FT provider is also provisioned on ACE. Though ACE initiated calls work fine it is recommended to disable Aura FT provider while using Aura SIP provider.

Workaround
• Disable Aura FT provider while making SIP calls using Aura SIP provider.
• When using AAFT applications ensure that the entity-link created from Session Manager uses the port 5063 on ACE.

Incorrect phone display when receiving call from thirdPartyCallController in a TPCv2/v3 makeCall

When a TPC call is made from ACE using Aura v2 SIP TLS service provider, calling party shows an incorrect display name.

Tracking number
ACECORE-13092/ACE-11520

Impact
It will be not known from where the call has come from.

Workaround
None. CM ticket raised for this issue.
First call after a CTI link has been restored always fails when the call is made from Browser add-in

First call fails from the browser add-in when CTI link in CM is brought down. End user must launch a second call before the functionality is restored.

**Tracking number**
ACECORE-13038/ACE-11580

**Impact**
First call will always fail after the CTI link is down.

**Workaround**
None.

---

Call forwarding and redirectCall have issues when using H.323 clients

When a CallForward is set on Party B to Party C and an ACE TPC v2 makeCall is made between Party A and Party B, the calling party display phone shows Party B as Called instead of Party C. The Called party, Party C, display phone shows Party B as Calling instead of Party A.

**Tracking number**
ACECORE-13133/ACE-11616

**Impact**
ACE applications and OneX soft or hard clients will be notified incorrectly about the other connection involved in the call.

**Workaround**
None.
Chapter 20: CS 1000 service provider considerations

This section contains information about known issues related to the Avaya Communication Server 1000 service provider.

Related Links
- No busy notification for a network initiated call to a monitored DN on a CS 1000 TR/87 provider on page 52

- Multiple transfers on a CS1000 provider results in inconsistent behavior on page 53

No busy notification for a network initiated call to a monitored DN on a CS 1000 TR/87 provider

If a user makes a network initiated call to a monitored DN, the call fails to establish when the DN is busy. However, no Call Notification Busy event is sent to the application monitoring this DN. Instead, a disconnect event is sent when the call fails.

This issue only occurs on the CS 1000 TR/87 provider.

Tracking number
ACECORE-7681

Impact
The application does not receive the Busy event, and does not know why the call was terminated.

Workaround
No workaround at this time.

Failed to CallSender when ACE SIP Interface makecall from CS1K set to MM then CallSender to BCM set

Configuration:
1. Configure SIP trunk from CS1K7.6 to SM
2. ACE SIP Interface

Procedure:
1. Construct and send makeCallSession request to ACE to make call between CS1K DN and Modular Messaging
2. CS1K user logins its mailbox on MM to check message then presses 88 to make call back to the called through CallSender application to BCM EndPoint that had left a voicemail
3. BCM DN answers the call.

Observation: Call is dropped immediately.

Tracking number
ACECORE-13161/ACE—11678

Impact
Can not initiate a call back through ACE between CS1K DN & MM to reach back to the caller.

Workaround
This issue doesn't happen when CS1K DN calls directly to MM without ACE.

Related Links
CS 1000 service provider considerations on page 52

Multiple transfers on a CS1000 provider results in inconsistent behavior

Description
When multiple transfers are made on a CS 1000 service provider, the original participants of the call are shown as active participants in the call, even though they are no longer in the call.

Tracking number
ACE-12457

Impact
If the customer is using the GoogleApps integration feature of ACE with Esna software and if there are multiple transfers performed in the same call, the ILync client pop ups are inconsistent and end call operation from ILync client fails.
