PSN # PSN004775u

Original publication date: 12-Aug-16. This is Issue #01, published date: 12-Aug-16.

Severity/risk level

Medium

Urgency

When convenient

### Name of problem

VOSS 5.1.1.1: DHCP relay may forward DHCP requests from multiple VLAN Interfaces

### Products affected

VSP 8000 Platforms – release VOSS 5.1.1.1

VSP 7200 Platforms – release VOSS 5.1.1.1

### Problem description

VSP 8000 and VSP 7200 platforms running VOSS 5.1.1.1 with DHCP relay enabled on more than one VLAN, may see DHCP request packets relayed from multiple VLAN interfaces on the switch towards the configured DHCP server(s). If encountered, this may result in endpoint devices (using DHCP for address assignment), to not be assigned an IP address correctly by the DHCP Server.

### Resolution

This DHCP Relay behavior will be corrected in the VOSS 5.1.1.2 release. Deployments using DHCP Relay on the VSP 8000 and VSP 7200 platforms are advised to deploy VOSS 5.1.1.2 when available.

### Workaround or alternative remediation

n/a

### Remarks

n/a

## Patch Notes

The information in this section concerns the patch, if any, recommended in the Resolution above.

It is recommended to ensure a current backup is saved prior to applying the patch
