Notice
While reasonable efforts have been made to ensure that the information in this document is complete and accurate at the time of printing, Avaya assumes no liability for any errors. Avaya reserves the right to make changes and corrections to the information in this document without the obligation to notify any person or organization of such changes.

Documentation disclaimer
"Documentation" means information published in varying mediums which may include product information, operating instructions and performance specifications that are generally made available to users of products. Documentation does not include marketing materials. Avaya shall not be responsible for any modifications, additions, or deletions to the original published version of Documentation unless such modifications, additions, or deletions were performed by or on the express behalf of Avaya. End User agrees to indemnify and hold harmless Avaya, Avaya’s agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation, to the extent made by End User.

Link disclaimer
Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or Documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

Warranty
Avaya provides a limited warranty on Avaya hardware and software. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya’s standard warranty language, as well as information regarding support for this product while under warranty is available to Avaya customers and other parties through the Avaya Support website: https://support.avaya.com/helpcenter/getGenericDetails?detailId=C20091120112456651010 under the link "Warranty & Product Lifecycle" or such successor site as designated by Avaya. Please note that if You acquired the product(s) from an authorized Avaya Channel Partner outside of the United States and Canada, the warranty is provided to You by said Avaya Channel Partner and not by Avaya.

"Hosted Service" means an Avaya hosted service subscription that You acquire from either Avaya or an authorized Avaya Channel Partner (as applicable) and which is described further in Hosted SAS or other service description documentation regarding the applicable hosted service. If You purchase a Hosted Service subscription, the foregoing limited warranty may not apply but You may be entitled to support services in connection with the Hosted Service as described further in your service description documents for the applicable Hosted Service. Contact Avaya or Avaya Channel Partner (as applicable) for more information.

Hosted Service
THE FOLLOWING APPLIES ONLY IF YOU PURCHASE AN AVAYA HOSTED SERVICE SUBSCRIPTION FROM AVAYA OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE), THE TERMS OF USE FOR HOSTED SERVICES ARE AVAILABLE ON THE AVAYA WEBSITE, HTTPS://SUPPORT.AVAYA.COM/LICENSEINFO UNDER THE LINK "Avaya Terms of Use for Hosted Services" OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, AND ARE APPLICABLE TO ANYONE WHO ACCESES OR USES THE HOSTED SERVICE. BY ACCESSING OR USING THE HOSTED SERVICE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE DOING SO (HEREAFTER REFERRED TO INTERCHANGEABLY AS "YOU" AND "END USER"), AGREE TO THE TERMS OF USE. IF YOU ARE ACCEPTING THE TERMS OF USE ON BEHALF OF A COMPANY OR OTHER LEGAL ENTITY, YOU REPRESENT THAT YOU HAVE THE AUTHORITY TO BIND SUCH ENTITY TO THESE TERMS OF USE. IF YOU DO NOT HAVE SUCH AUTHORITY, OR IF YOU DO NOT WISH TO ACCEPT THESE TERMS OF USE, YOU MUST NOT ACCESS OR USE THE HOSTED SERVICE OR AUTHORIZE ANYONE TO ACCESS OR USE THE HOSTED SERVICE.

Licenses
THE SOFTWARE LICENSE TERMS AVAILABLE ON THE AVAYA WEBSITE, HTTPS://SUPPORT.AVAYA.COM/LICENSEINFO, UNDER THE LINK "AVAYA SOFTWARE LICENSE TERMS (Avaya Products)" OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, ARE APPLICABLE TO ANYONE WHO DOWNLOADS, USES AND/OR INSTALLS AVAYA SOFTWARE, PURCHASED FROM AVAYA INC., ANY AVAYA AFFILIATE, OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE) UNDER A COMMERCIAL AGREEMENT WITH AVAYA OR AN AVAYA CHANNEL PARTNER. UNLESS OTHERWISE AGREED TO BY AVAYA IN WRITING, AVAYA DOES NOT EXTEND THIS LICENSE IF THE SOFTWARE WAS OBTAINED FROM ANYONE OTHER THAN AVAYA, AN AVAYA AFFILIATE OR AN AVAYA CHANNEL PARTNER; AVAYA, RESERVES THE RIGHT TO TAKE LEGAL ACTION AGAINST YOU AND ANYONE ELSE USING OR SELLING THE SOFTWARE WITHOUT A LICENSE. BY INSTALLING, DOWNLOADING OR USING THE SOFTWARE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF THE ENTITY FOR WHOM YOU ARE INSTALLING, DOWNLOADING OR USING THE SOFTWARE (HEREINAFTER REFERRED TO INTERCHANGEABLY AS "YOU" AND "END USER"), AGREE TO THESE TERMS AND CONDITIONS AND CREATE A BINDING CONTRACT BETWEEN YOU AND AVAYA INC. OR THE APPLICABLE AVAYA AFFILIATE ("AVAYA").

Avaya grants You a license within the scope of the license types described below, with the exception of Heritage Nortel Software, for which the scope of the license is detailed below. Where the order documentation does not expressly identify a license type, the applicable license will be a Designated System License as set forth below in the Designated System(s) License (DS) section as applicable. The applicable number of licenses and units of capacity for which the license is granted will be one (1), unless a different number of licenses or units of capacity is specified in the documentation or other materials available to You. "Software" means computer programs in object code, provided by Avaya or an Avaya Channel Partner, whether as stand-alone products, pre-installed on hardware products, and any upgrades, updates, patches, bug fixes, or modified versions thereto. "Designated Processor" means a single stand-alone computing device. "Server" means a set of Designated Processors that hosts (physically or virtually) a software application to be accessed by multiple users. "Instance" means a single copy of the Software executing at a particular time: (i) on one physical machine; or (ii) on one deployed software virtual machine ("VM") or similar deployment.

License types
Designated System(s) License (DS), End User may install and use each copy or an Instance of the Software only: 1) on a number of Designated Processors up to the number indicated in the order; or 2) up to the number of Instances of the Software as indicated in the order, Documentation, or as authorized by Avaya in writing. Avaya may require the Designated Processor(s) to be identified in the order by type, serial number, feature key, Instance, location or other specific designation, or to be provided by End User to Avaya through electronic means established by Avaya specifically for this purpose.

Named User License (NU). You may: (i) install and use each copy or Instance of the Software on a single Designated Processor or Server per authorized Named User (defined below); or (ii) install and use each copy or Instance of the Software on a Server so long as only authorized Named Users access and use the Software. "Named User", means a user or device that has been expressly authorized by Avaya to access and use the Software. At Avaya's sole discretion, a "Named User" may be, without limitation, designated by type, serial number, feature key, Instance, location or other specific designation, or to be provided by End User to Avaya through electronic means established by Avaya specifically for this purpose.

Shrinkwrap License (SR). You may install and use the Software in accordance with the terms and conditions of the applicable license agreements, such as "shrinkwrap" or "clickthrough" license accompanying or applicable to the Software ("Shrinkwrap License").
Heritage Nortel Software

"Heritage Nortel Software" means the software that was acquired by Avaya as part of its purchase of the Nortel Enterprise Solutions Business in December 2009. The Heritage Nortel Software is the software contained within the list of Heritage Nortel Products located at https://support.avaya.com/Licenselinfo under the link "Heritage Nortel Products" or such successor site as designated by Avaya. For Heritage Nortel Software, Avaya grants Customer a license to use Heritage Nortel Software provided hereunder solely to the extent of the authorized activation or authorized usage level, solely for the purpose specified in the Documentation, and solely as embedded in, for execution on, or for communication with Avaya equipment. Charges for Heritage Nortel Software may be based on extent of activation or use authorized as specified in an order or invoice.

Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Hosted Service, or hardware provided by Avaya. All content on this site, the documentation, Hosted Service, and the product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, information, or part, including any code and software, unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, and or use without the express written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Virtualization

The following applies if the product is deployed on a virtual machine. Each product has its own ordering code and license types. Unless otherwise stated, each Instance of a product must be separately licensed and ordered. For example, if the end user customer or Avaya Channel Partner would like to install two instances of the same type of products, then two products of that type must be ordered.

Third Party Components

"Third Party Components" mean certain software programs or portions thereof included in the Software or Hosted Service may contain software (including open source software) distributed under third party agreements ("Third Party Components"), which contain terms regarding the rights to use certain portions of the Software ("Third Party Terms"). As required, information regarding distributed Linux OS source code (for those products that have distributed Linux OS source code) and identifying the copyright holders of the Third Party Components and the Third Party Terms that apply is available in the products, Documentation or on Avaya’s website at: https://support.avaya.com/Copyright or such successor site as designated by Avaya. The open source software license terms provided as Third Party Terms are consistent with the license rights granted in these Software License Terms, and may contain additional rights benefiting You, such as modification and distribution of the open source software. The Third Party Terms shall take precedence over these Software License Terms, solely with respect to the applicable Third Party Components to the extent that these Software License Terms impose greater restrictions on You than the applicable Third Party Terms.

The following applies only if the H.264 (AVC) codec is distributed with the product, in whole or in part, including any code and software. The following applies if the product is deployed on a virtual machine.

Service Provider

THE FOLLOWING APPLIES TO AVAYA CHANNEL PARTNER’S HOSTING OF AVAYA PRODUCTS OR SERVICES. THE PRODUCT OR HOSTED SERVICE MAY USE THIRD PARTY COMPONENTS SUBJECT TO THIRD PARTY TERMS AND REQUIRE A SERVICE PROVIDER TO BE INDEPENDENTLY LICENSED DIRECTLY FROM THE THIRD PARTY SUPPLIER. AN AVAYA CHANNEL PARTNER’S HOSTING OF AVAYA PRODUCTS MUST BE AUTHORIZED IN WRITING BY AVAYA AND IF THOSE HOSTED PRODUCTS USE OR EMBED CERTAIN THIRD PARTY SOFTWARE, INCLUDING BUT NOT LIMITED TO MICROSOFT SOFTWARE OR CODECS, THE AVAYA CHANNEL PARTNER IS REQUIRED TO INDEPENDENTLY OBTAIN ANY APPLICABLE LICENSE AGREEMENTS, AT THE AVAYA CHANNEL PARTNER’S EXPENSE, DIRECTLY FROM THE APPLICABLE THIRD PARTY SUPPLIER.

WITH RESPECT TO CODECS, IF THE AVAYA CHANNEL PARTNER IS HOSTING ANY PRODUCTS THAT USE OR EMBED THE H.264 CODEC OR H.265 CODEC, THE AVAYA CHANNEL PARTNER ACKNOWLEDGES AND AGREES THE AVAYA CHANNEL PARTNER IS RESPONSIBLE FOR ANY AND ALL RELATED FEES AND/OR ROYALTIES. THE H.264 (AVC) CODEC IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO: (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION FOR H.264 (AVC) AND H.265 (HEVC) CODECS MAY BE OBTAINED FROM MPEG LA, L.L.C. SEE HTTP://WWW.MPEGLA.COM.

Compliance with Laws

You acknowledge and agree that it is Your responsibility for complying with any applicable laws and regulations, including, but not limited to laws and regulations related to call recording, data privacy, intellectual property, trade secret, fraud, and music performance rights, in the country or territory where the Avaya product is used.

Preventing Toll Fraud

“Toll Fraud” is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company’s behalf). Be aware that there can be a risk of Toll Fraud associated with your system and that, if Toll Fraud occurs, it can result in substantial additional charges for your telecommunications services.

Avaya Toll Fraud intervention

If you suspect that You are being victimized by Toll Fraud and You need technical assistance or support, call Technical Service Center Toll Fraud Intervention Hotline at +1-800-643-2353 for the United States and Canada. For additional support telephone numbers, see the Avaya Support website: https://support.avaya.com or such successor site as designated by Avaya.

Security Vulnerabilities

Information about Avaya’s security support policies can be found in the Security Policies and Support section of https://support.avaya.com/security.

Suspected Avaya product security vulnerabilities are handled per the Avaya Product Security Support Flow (https://support.avaya.com/css/P8/documents/100161515).

Downloading Documentation

For the most current versions of Documentation, see the Avaya Support website: https://support.avaya.com, or such successor site as designated by Avaya.

Contact Avaya Support

See the Avaya Support website: https://support.avaya.com for product or Hosted Service notices and articles, or to report a problem with your Avaya product or Hosted Service. For a list of support telephone numbers and contact addresses, go to the Avaya Support website: https://support.avaya.com (or such successor site as designated by Avaya), scroll to the bottom of the page, and select Contact Avaya Support.
Trademarks
The trademarks, logos and service marks ("Marks") displayed in this site, the Documentation, Hosted Service(s), and product(s) provided by Avaya are the registered or unregistered Marks of Avaya, its affiliates, its licensors, its suppliers, or other third parties. Users are not permitted to use such Marks without prior written consent from Avaya or such third party which may own the Mark. Nothing contained in this site, the Documentation, Hosted Service(s) and product(s) should be construed as granting, by implication, estoppel, or otherwise, any license or right in and to the Marks without the express written permission of Avaya or the applicable third party.

Avaya is a registered trademark of Avaya Inc.

All non-Avaya trademarks are the property of their respective owners. Linux® is the registered trademark of Linus Torvalds in the U.S. and other countries.

Deploying Avaya Aura® AVP Utilities

Comments on this document? infodev@avaya.com
Chapter 1: Introduction

Purpose
This document provides installation, initial configuration, basic maintenance checklists and procedures, and troubleshooting procedures. This document is intended for people who install and configure at a customer site.

Change history

<table>
<thead>
<tr>
<th>Issue</th>
<th>Date</th>
<th>Summary of changes</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>December 2019</td>
<td>Updated the “Deploying AVP Utilities and virtual machines on the services port” section.</td>
</tr>
<tr>
<td>5</td>
<td>September 2019</td>
<td>“Accessing the port matrix document” section is added.</td>
</tr>
<tr>
<td>4</td>
<td>April 2019</td>
<td>Updated “Installing patches and service packs using CLI” section.</td>
</tr>
<tr>
<td>3</td>
<td>January 2019</td>
<td>Added “Installing patches and service packs using CLI” section.</td>

</table>
Chapter 2: Overview

AVP Utilities overview

In Avaya Aura® Release 8.0, Utility Services is replaced by AVP Utilities. While some of the Utility Services features are migrated to other Avaya Aura® applications, the following features of Utility Services are migrated to AVP Utilities:

- Services Port access for virtual machines
- Appliance Virtualization Platform log collection and alarming
- SSH access for Appliance Virtualization Platform

The following features of Utility Services are migrated to other Avaya Aura® applications:

<table>
<thead>
<tr>
<th>Features of Utility Services 7.x</th>
<th>Migrated to</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enterprise System Directory (ESD)</td>
<td>Avaya Aura® System Manager 8.0 and later.</td>
<td>Only LDAP integration with Avaya Aura® System Manager is supported. Searching the LDAP directory is supported for SIP phones only.</td>
</tr>
<tr>
<td>File Server</td>
<td>Avaya Aura® Device Services 8.0 and later.</td>
<td>Avaya Aura® Device Services provides this feature for IP Phones, but not for Gateway Firmware.</td>
</tr>
<tr>
<td>MyPhone</td>
<td>Avaya Aura® Unified User Portal 8.0 and later.</td>
<td>Existing configurations must be re-applied, if any.</td>
</tr>
</tbody>
</table>

You can use the following features of Utility Services through third-party applications:

<table>
<thead>
<tr>
<th>Features of Utility Services 7.x</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Detail Recordings collection</td>
<td>You must use third-party applications. You can also use the Call Detail Recordings data with third-party solutions.</td>
</tr>
<tr>
<td>Dynamic Host Configuration Protocol (DHCP)</td>
<td>You must use a separate DHCP server.</td>
</tr>
</tbody>
</table>
Chapter 3: Planning

Planning checklist

Use the following checklist to plan your deployment process:

<table>
<thead>
<tr>
<th>#</th>
<th>Task</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Verify the network interface requirements.</td>
<td>See Network requirements on page 9</td>
</tr>
<tr>
<td>2</td>
<td>Verify the release details of the AVP Utilities OVA file.</td>
<td>See Release details of AVP Utilities on page 9</td>
</tr>
<tr>
<td>3</td>
<td>Download the OVA.</td>
<td>See Downloading software from PLDS on page 10</td>
</tr>
<tr>
<td>4</td>
<td>Ensure that the supported servers are available.</td>
<td>See Supported servers on page 11</td>
</tr>
<tr>
<td>5</td>
<td>Ensure that the supported footprints are available.</td>
<td>See Supported footprints for AVP Utilities on page 11</td>
</tr>
</tbody>
</table>

Network requirements

The following network interfaces are used for AVP Utilities.

<table>
<thead>
<tr>
<th>Network Adapter</th>
<th>Ethernet Port</th>
<th>Interface</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>eth0</td>
<td>Public</td>
<td>VM Public Interface</td>
</tr>
<tr>
<td>2</td>
<td>eth1</td>
<td>Services</td>
<td>Avaya Services Port, 192.11.13.6/30</td>
</tr>
<tr>
<td></td>
<td>eth1:1</td>
<td></td>
<td>Avaya Services Port, 192.168.13.1/29</td>
</tr>
<tr>
<td>3</td>
<td>eth2</td>
<td>Out of Band Management</td>
<td>VM Out of Band Management</td>
</tr>
</tbody>
</table>

Release details of AVP Utilities

Details of AVP Utilities OVA file are as follows:
**Release version** | **File name**
--- | ---
8.1 | AVPU-8.1.0.0.0.xx-xxx-xx_xxxxx.ova

---

### Downloading software from PLDS

When you place an order for an Avaya PLDS-licensed software product, PLDS creates the license entitlements of the order and sends an email notification to you. The email includes a license activation code (LAC) and instructions for accessing and logging into PLDS. Use the LAC to locate and download the purchased license entitlements.

In addition to PLDS, you can download the product software from [http://support.avaya.com](http://support.avaya.com) using the **Downloads and Documents** tab at the top of the page.

**Note:**

Only the latest service pack for each release is posted on the support site. Previous service packs are available only through PLDS.

**Procedure**

1. Enter [http://plds.avaya.com](http://plds.avaya.com) in your Web browser to access the Avaya PLDS website.
2. Enter your login ID and password.
3. On the PLDS home page, select **Assets**.
4. Click **View Downloads**.
5. Click on the search icon (magnifying glass) for **Company Name**.
6. In the **Name** field, enter **Avaya** or the Partner company name.
7. Click **Search Companies**.
8. Locate the correct entry and click the **Select** link.
9. Enter the Download Pub ID.
10. Click **Search Downloads**.
11. Scroll down to the entry for the download file and click the **Download** link.
12. In the **Download Manager** box, click the appropriate download link.

**Note:**

The first link, **Click to download your file now**, uses the Download Manager to download the file. The Download Manager provides features to manage the download (stop, resume, auto checksum). The **click here** link uses your standard browser download and does not provide the download integrity features.

13. If you use Internet Explorer and get an error message, click the **install ActiveX** message at the top of the page and continue with the download.
14. Select a location where you want to save the file and click **Save**.
15. If you used the Download Manager, click **Details** to view the download progress.

---

**Supported servers**

AVP Utilities supports deployment on the following servers:

- Avaya Converged Platform 120 server
- S8300E
- HP ProLiant DL360p G8
- HP ProLiant DL360 G9
- Dell™ PowerEdge™ R620
- Dell™ PowerEdge™ R630

**Supported footprints for AVP Utilities**

To deploy AVP Utilities, the following footprints are required on the ESXi host:

<table>
<thead>
<tr>
<th>AVP Utilities</th>
<th>Minimum CPU speed based on Xeon E5620 or equivalent processor</th>
<th>vCPUs</th>
<th>RAM (GB)</th>
<th>HDD (GB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard mode</td>
<td>2.2 GHz</td>
<td>1</td>
<td>1</td>
<td>20</td>
</tr>
<tr>
<td>Hardened mode</td>
<td>2.2 GHz</td>
<td>1</td>
<td>1</td>
<td>20</td>
</tr>
<tr>
<td>Hardened mode (DoD)</td>
<td>2.2 GHz</td>
<td>1</td>
<td>1</td>
<td>20</td>
</tr>
</tbody>
</table>
Chapter 4: Deploying

Deployment modes

You can deploy AVP Utilities in one of the following modes:

- Standard mode
- Hardened mode
- Hardened mode DoD

You can select the deployment mode while deploying AVP Utilities. By default, Out of Band Management (OOBM) is disabled in all the modes.

Supported security hardening grades

The following security hardening grade is supported for each deployment mode:

<table>
<thead>
<tr>
<th>Deployment mode</th>
<th>Security hardening grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard mode</td>
<td>Standard</td>
</tr>
<tr>
<td>Hardened mode</td>
<td>Commercial</td>
</tr>
<tr>
<td>Hardened mode (DoD)</td>
<td>Military</td>
</tr>
</tbody>
</table>

Supported security attributes

Depending on the deployment mode selected, the following security attributes are applied on AVP Utilities:

<table>
<thead>
<tr>
<th>Security attribute</th>
<th>Standard mode</th>
<th>Hardened mode</th>
<th>Hardened mode (DoD)</th>
</tr>
</thead>
<tbody>
<tr>
<td>VMX hardening</td>

<td>Y (optional)</td>
<td>Y</td>
<td>Y</td>
</tr>
</tbody>
</table>

**Deployment scenarios**

AVP Utilities supports the following deployment scenarios for a fresh deployment:

<table>
<thead>
<tr>
<th>Deployment scenario</th>
<th>Description</th>
</tr>
</thead>
</table>
| Scenario 1 | For a complete fresh deployment, do the following:  
• Deploy Appliance Virtualization Platform 8.1.  
• After successful registration of Appliance Virtualization Platform 8.1 on the Solution Deployment Manager client, deploy AVP Utilities 8.1. |
| Scenario 2 | If you already deployed the Appliance Virtualization Platform 8.1, then do the following:  
• Add Appliance Virtualization Platform 8.1 host on Solution Deployment Manager.  
• Deploy AVP Utilities 8.1. |

*Table continues…*
### Deployment scenario

<table>
<thead>
<tr>
<th>Scenario 3</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the existing AVP Utilities application is corrupted or inaccessible, then do the following:</td>
<td></td>
</tr>
<tr>
<td>• Roll back to Utility Services.</td>
<td></td>
</tr>
<tr>
<td>• Re-deploy AVP Utilities.</td>
<td></td>
</tr>
</tbody>
</table>

- [Rolling back to Utility Services](#) on page 47
- [Retrying Utility Services to AVP Utilities upgrade](#) on page 47

**Note:**

While the AVP Utilities deployment is in progress, do not deploy other virtual machines.

---

## Deploying AVP Utilities

### About this task

Use this procedure to deploy AVP Utilities on Appliance Virtualization Platform.

To deploy AVP Utilities, you can use Solution Deployment Manager from System Manager or the Solution Deployment Manager client, when System Manager is unavailable.

### Before you begin

- Add a location.
  
  See “Adding a location” in *Administering Avaya Aura® System Manager*.

- Add Appliance Virtualization Platform.
  
  See “Adding an Appliance Virtualization Platform or ESXi host” in *Administering Avaya Aura® System Manager*.

- Download the AVP Utilities OVA file.

### Procedure

1. To access Solution Deployment Manager, do one of the following:

   - On the System Manager web console, click **Services > Solution Deployment Manager**.

   - On the desktop, click the Solution Deployment Manager icon 🔗.

2. In **Application Management Tree**, select a platform.

3. On the Applications tab, in the Applications for Selected Location <location name> section, click **New**.
   
   The system displays the Applications Deployment section.
4. In the Select Location and Platform section, do the following:
   a. In Select Location, select a location.
   b. In Select Platform, select a platform.

   The system displays the host name in the Platform FQDN field.

5. In Data Store, select a data store, if not displayed upon host selection.

   The page displays the capacity details.

6. Click Next.

7. To get the OVA file, select the OVA tab, and click one of the following:
   • URL, in OVA File, type the absolute path to the application OVA file, and click Submit.
   • S/W Library, in File Name, select the application OVA file.
   • Browse, select the required application OVA file from a location on the computer, and click Submit File.

   If the OVA file does not contain a valid Avaya certificate, then the system does not parse the OVA and displays the message: Invalid file content. Avaya Certificate not found or invalid.

8. Click Next.

   In Configuration Parameters and Network Parameters sections, the system displays the fields that are specific to the application that you deploy.

9. In the Network Parameters section, ensure that the following fields are preconfigured:
   • Public
   • Services
   • Out of Band Management.

   For more information, see “Application Deployment field descriptions”.

10. In the Configuration Parameters section, complete the fields.

    For more information about Configuration Parameters, see “Network Parameters and Configuration Parameters field descriptions”.

11. Click Deploy.

12. Click Accept the license terms.

    In the Platforms for Selected Location <location name> section, the system displays the deployment status in the Current Action Status column.

    The system displays the virtual machine on the Applications for Selected Location <location name> page.

13. To view details, click the Status Details link.
Next steps
1. To activate the serviceability agent registration, reboot the AVP Utilities virtual machine.
2. Deploy all other Avaya Aura® applications at a time.

[Deploying AVP Utilities](#) on page 14
Enabling FIPS mode

Before you begin
When AVP Utilities is deployed in a Hardened mode or Hardened mode (DoD), FIPS mode is automatically enabled. However, when AVP Utilities is deployed in standard mode, you must enable the FIPS mode manually.

⚠️ Warning:
After you enable FIPS mode, AVP Utilities is rebooted and you cannot disable the reboot.

Procedure
1. Log in to AVP Utilities CLI as an administrator.
2. Run the following script: `fips_mode_enable`.
   After the script is executed, AVP Utilities is rebooted.
3. After the reboot, log in to AVP Utilities again as an administrator.
4. Run the following command to ensure that the FIPS mode is enabled: `sysctl crypto.fips_enabled`.
   AVP Utilities displays `crypto.fips_enabled = 1` where 1 indicates that the FIPS mode is enabled.

Security hardening features

About this task
Although AVP Utilities can be deployed in hardened mode, there are options to selectively enable various hardening features when deployed in standard mode. These include:

- FIPS compliance
- AIDE for file integrity check
- Secure Linux (SELinux)
- Auditing at operating system level (Auditd)

⚠️ Note:
These features may have a performance impact and should only be enabled if required.

⚠️ Warning:
After you enable FIPS mode, AVP Utilities is rebooted and you cannot disable the reboot.

You can use the following security hardening commands:

- To enable FIPS mode, run the following script: `fips_mode_enable`
- To enable aide, run the following command: `aide_enable`.
Enabling Out of Band Management

About this task

Services running on the management interface provide an opportunity for an attacker to gain privileged access to the systems. Out of Band Management (OOBM) is a physically and logically separate network connection. OOBM connects to a customer’s private management network and provides secure management and administration of Avaya products.

If OOBM is not enabled as part of the deployment, enable AVP Utilities OOBM as part of a solution-level OOBM implementation. When you enable OOBM on AVP Utilities, the following services connect to the OOBM network with physical connection on the eth2 port. Do not enable OOBM applications individually. Coordinate Enablement of OOBM with all other components that form the solution.

<table>
<thead>
<tr>

<td>Out of Band Management / Services</td>
</tr>
<tr>
<td>Alarm source</td>
<td>Out of Band Management</td>
</tr>
<tr>
<td>SAL connection (SSH)</td>
<td>Out of Band Management</td>
</tr>
</tbody>
</table>

Procedure

1. Log in to AVP Utilities as an administrator.
2. Run the following commands as required:
   - To enable Out of Band Management, run `sudo /opt/avaya/common_services/ovf_set_oobm OOBM_Enabled`
   - To disable Out of Band Management, run `sudo /opt/avaya/common_services/ovf_set_oobm OOBM_Disabled`

Installing software patches

About this task

Use the procedure to install software patches and service packs that are entitled for an Avaya Aura® application, and commit the patches that you installed.
Note:

When you are installing an element patch and the patch installation fails or the patch information is unavailable in Upgrade Actions > Installed Patches on the Upgrade Management page, then perform the following:

1. Ensure that the element is reachable on System Manager Solution Deployment Manager.
2. Refresh the element.

Before you begin

- Perform the preupgrade check.
- If you upgrade an application that was not deployed from Solution Deployment Manager:
  1. Select the virtual machine.
  2. To establish trust, click More Actions > Re-establish Connection.
  3. Click Refresh VM.

Procedure

1. On the System Manager web console, click Services > Solution Deployment Manager.
2. In the navigation pane, click Upgrade Management.
3. Select an Avaya Aura® application on which you want to install the patch.
4. Click Upgrade Actions > Upgrade/Update.
5. On the Upgrade Configuration page, click Edit.
6. In the General Configuration Details section, in the Operation field, click Update.
7. In Upgrade Source, select the software library where you have downloaded the patch.
8. (Optional) Click the Auto Commit check box, if you want the system to automatically commit the patch.

Note:

If an application is unreachable, the auto commit operation might fail and the Update Patch Status window displays a warning message. You must wait for some time, select the same patch in the Installed Patches section, and perform the commit operation again.

9. In the Upgrade Configuration Details section, in the Select patches for update table, select the software patch that you want to install.
10. Click Save.
11. On the Upgrade Configuration page, ensure that the Configuration Status field displays ✔.

If the field displays ✗, review the information on the Edit Upgrade Configuration page.
12. Click Upgrade.
13. On the Job Schedule page, click one of the following:
   - **Run Immediately**: To perform the job.
   - **Schedule later**: To perform the job at a scheduled time.

14. Click **Schedule**.
   On the Upgrade Management page, the **Update status** and **Last Action Status** fields display ✔.

15. To view the update status, click ✔.
   The **Upgrade Job Details** page displays the detailed update checks that are in progress.
   Click **Done** to close the window.
   When the update is complete, the **Update status** and **Last Action Status** fields display ✔.

16. Click **Upgrade Actions > Installed Patches**.
17. On the Installed Patches page, in the Patch Operation section, click **Commit**.
   The page displays all software patches that you can commit.
   You can use **Rollback** and **Uninstall** options if you must rollback and uninstall the software patch.

18. Select the patch that you installed, in the Job Schedule section, click **Run Immediately**.
   You can schedule to commit the patch at a later time by using the **Schedule later** option.

19. Click **Schedule**.
   The Upgrade Management page displays the last action as **Commit**.

20. Ensure that **Update status** and **Last Action Status** fields display ✔.

Installing patches and service packs using CLI

About this task
You can install the software patches and service packs using:

- AVP Utilities CLI
- Solution Deployment Manager

Use this procedure to install software patches by using AVP Utilities CLI.

Before you begin

- You must uninstall the previous feature pack or service pack, if available.
  For more information on uninstalling the feature pack or service pack by using the Solution Deployment Manager, see Uninstalling the feature pack or service pack by using Solution Deployment Manager on page 49.
- Do the following by using AVP Utilities CLI:
  - To view the list of patch versions installed, run the following command: `swversion`.
    The last line of the command output provides the patch number, if installed.
    You can also run the following command to view the list of patches or service packs installed: `/opt/avaya/common_services/update -l`.
    If the patches or service packs are not installed, then there will no output.
  - To uninstall the previous feature pack or service pack, run the following command: `update -r <patch tag>`.
    For example, `update -r 8011002`.

Procedure

1. Using an SCP client, copy the AVP Utilities update to the `/tmp` directory.
2. Log in to AVP Utilities CLI as an administrator and run the following command: `/opt/avaya/common_services/update -i /tmp/<US update zip filename>`.
3. Respond to the prompt accordingly.
4. After the patch is installed, check the list of patch versions installed using the following command: `swversion`.
5. Reboot AVP Utilities to ensure all updates take effect by using Solution Deployment Manager or the Embedded Host Client.

For information about installing software patches by using the Solution Deployment Manager, see Installing software patches on page 20.
Chapter 5: Configuring

Enabling or disabling EASG

About this task
Use this procedure to enable or disable EASG. By enabling EASG, you grant Avaya access to your system. The access maximizes the performance and value of your Avaya support entitlements, and Avaya can resolve product issues in a timely manner. Avaya recommends that you do not disable EASG, because it impacts Avaya’s ability to provide support for the product and customers will then have to manage the product themselves.

Procedure
1. Log in to the AVP Utilities as an administrator.
2. Run one of the following scripts as required:
   • To enable EASG: Enable_EASG.sh.
   • To disable EASG: Disable_EASG.sh.
   • To permanently disable EASG: PermanentEASGRemoval.sh.

Viewing the EASG status

About this task
Use this procedure to know whether EASG is enabled or disabled.

Procedure
1. Log in to the AVP Utilities CLI interface as an administrator.
2. Run the following script: sudo EASGStatus.
Removing EASG

About this task
Use this procedure to remove Enhanced Access Security Gateway (EASG) and Avaya Services logins. You can use the OVA deployment process to reinstall EASG.

Note:
If you remove EASG, Avaya cannot access your system to provide support.

Procedure
1. Log in to the AVP Utilities as an administrator.
2. Run the following command: /opt/avaya/permanentEASGRemoval.sh.

Linux kernel configuration
AVP Utilities includes the Red Hat updates to support mitigation of the Meltdown and Spectre vulnerabilities. However, this can affect the performance of AVP Utilities. So a script `kernel_opts.sh` is introduced so that the script can control how these vulnerabilities are handled through the setting of kernel options. The effect of running the kernel configuration script is immediate and continues across reboots. You can run the script as an admin user by using the AVP Utilities CLI.

The script has the following arguments:
- status: Displays the current status of the kernel options.
- enable: Enables all flags to provide maximum protection.
- disable: Disables all flags to provide maximum performance.

EASG site certificate
EASG site certificates are used by the onsite Avaya technicians who do not have access to the Avaya network to generate a response to the EASG challenge. The technician will generate and provide the EASG site certificate to the customer. The customer loads this EASG site certificate on each server to which the customer has granted the technician access. The EASG site certificate will only allow access to systems on which it has been installed, and will only allow access to the given Avaya technician and cannot be used by anyone else to access the system including other Avaya technicians. Once this is done, the technician logs in with the EASG challenge/response.
Managing site certificates

Before you begin

1. Obtain the site certificate from the Avaya support technician.
2. You must load this site certificate on each server that the technician needs to access. Use a file transfer tool, such as WinSCP to copy the site certificate to /home/cust directory, where cust is the login ID. The directory might vary depending on the file transfer tool used.
3. Note the location of this certificate and use in place of installed_pkcs7_name in the commands.
4. You must have the following before loading the site certificate:
   • Login ID and password
   • Secure file transfer tool, such as WinSCP
   • Site Authentication Factor

Procedure

1. To install the site certificate:
   a. Run the following command: sudo EASGSiteCertManage --add <installed_pkcs7_name>.
   b. Save the Site Authentication Factor to share with the technician once on site.
2. To view information about a particular certificate: run the following command:
   • sudo EASGSiteCertManage --list: To list all the site certificates that are currently installed on the system.
   • sudo EASGSiteCertManage --show <installed_pkcs7_name>: To display detailed information about the specified site certificate.
3. To delete the site certificate, run the following command:
   • sudo EASGSiteCertManage --delete <installed_pkcs7_name>: To delete the specified site certificate.
   • sudo EASGSiteCertManage --delete all: To delete all the site certificates that are currently installed on the system.
Chapter 6: Migrating

Supported migration paths

The following migration paths are supported:

<table>
<thead>
<tr>
<th>From Utility Services</th>
<th>To AVP Utilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.0.x</td>
<td>8.1</td>
</tr>
<tr>
<td>7.x.x</td>
<td>8.1</td>
</tr>
<tr>
<td>6.x</td>
<td>8.1</td>
</tr>
</tbody>
</table>

Supported features of Utility Services after migrating to AVP Utilities

About this task

After you migrate from Avaya Aura® Utility Services to Avaya Aura® AVP Utilities, only the following Utility Services features are supported in AVP Utilities.

- Services Port access for VMs (IP Forwarding enabled).
- AVP alarming and log harvesting.
- Enabling SSH access for Appliance Virtualization Platform.

If Utility Services is deployed in "Services Port Only" mode or "Hardened Mode Services port only" mode, then the hardening settings configured for Utility Services will be retained for AVP Utilities. The mapping of Utility Services modes to AVP Utilities modes is as follows:

<table>
<thead>
<tr>
<th>Avaya Aura® Utility Services mode</th>
<th>Avaya Aura® AVP Utilities mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full functionality</td>
<td>Standard mode</td>
</tr>
<tr>
<td>Utility Services only</td>
<td>Standard mode</td>
</tr>
<tr>
<td>Services port only</td>
<td>Standard mode</td>
</tr>
<tr>
<td>Hardened mode services port only</td>
<td>Hardened mode (Department of Defence)</td>
</tr>
</tbody>
</table>

During migration, you can restore only applicable configuration data from the Utility Services backup file.
## Checklist to migrate from Utility Services 7.x to AVP Utilities 8.1

### About this task

If you are using Utility Services 7.x, then you can migrate to AVP Utilities 8.1.

<table>

### Migrating System Platform-based system and elements in bulk to Appliance Virtualization Platform remotely by using System Manager Solution Deployment Manager

**About this task**

Use this procedure to remotely migrate System Platform-based system and elements in bulk to Appliance Virtualization Platform Release 8.1. You can remotely migrate:

- Communication Manager, Branch Session Manager, and Utility Services that are running on System Platform.
- Communication Manager Release 5.2.1 bare metal system.

**Before you begin**

- On the Manage Elements page, add the System Platform system and required elements. For information about adding a new element, see [Administering Avaya Aura® System Manager](#).
- Refresh the element.
- Analyze the software.
- Perform the pre-upgrade check.
- Download a copy of the AVP_Bulk import spread sheet.xlsx spreadsheet from Avaya PLDS website at [https://plds.avaya.com](https://plds.avaya.com) or from Avaya Support website at [https://support.avaya.com](https://support.avaya.com). Fill the required system details in the spreadsheet.

**Note:**

If you provide the incorrect data in the spreadsheet, the upgrade might fail.

**Procedure**

1. On the System Manager web console, click **Services** > **Solution Deployment Manager**.
2. In the navigation pane, click **Upgrade Management**.
   The system displays the Upgrade Management page.

3. Select the required element.
   When you select an element, the system selects the parent of the element and all child elements of the element in the hierarchy.

4. Click **Upgrade Actions > Upgrade/Update**.

5. On the Upgrade Configuration page, click **Import AVP Configuration(s)**.

6. On the Upload AVP Xlsx File Configuration dialog box, perform the following:
   a. Click **Browse** and select the file from the local computer.
   b. To upload the spreadsheet, click **Upload**.
   c. Click **Submit**.
      The system displays the file size, timestamp, and percentage complete for the uploaded file. When the file upload is in-progress, do not navigate away from the page.
      On the Upgrade Management page, the system displays the message: Please Wait - Saving Import AVP Configuration .... You must wait until the system stops showing this message.

7. On the Upgrade Management page, click 📝.
   The **Configuration Status** column displays ✔.

8. To save the configuration, click **Save Configuration**.
   The update configuration is saved as a job in the Upgrade Jobs Status page.

9. On the Upgrade Configuration page, click **Upgrade**.

10. To view the upgrade status, perform the following:
    a. In the navigation pane, click **Upgrade Job Status**.
    b. In the **Job Type** field, click **Upgrade**.
    c. Click the upgrade job that you want to view.

11. On the Upgrade Management page, click 📝.
    The **Last Action** column displays **Upgrade**, and **Last Action Status** column displays ✔.
Creating a backup of Utility Services

About this task
You can backup Utility Services configuration files to transfer the configuration files or to rollback when required. When you backup the Utility Services when it is Hardened Mode, the following configuration files are included:

- SSH
- AIDE: /etc/aide.conf
- Audit: /etc/audit/auditd.conf
- Login defs: /etc/login.defs
- Password auth: /etc/pam.d/password-auth
- Password settings: /etc/security/pwquality.conf
- User passwords and group membership:
  - /etc/passwd
  - /etc/shadow
  - /etc/group
  - /etc/gshadow
- rsyslog: /etc/rsyslog.conf
- selinux: /etc/selinux/config
- Access Control List (ACL):
  - /etc/hosts.allow
  - /etc/hosts.deny
- Banner: /etc/issue

Procedure
1. Log in to the Utility Services CLI as an administrator.
2. Run one of the following scripts:
   - For back-end, use: `/opt/avaya/common_services/backup -b <backup file name>`
   - For front-end, use: `/opt/avaya/common_services/backup.sh`

Result
Utility Services backup files are stored in `/tmp` folder.
Upgrading Utility Services 7.x to AVP Utilities Release 8.1 in bulk during Appliance Virtualization Platform upgrade

About this task
Use this procedure to upgrade Utility Services 7.x to AVP Utilities Release 8.1 in bulk when you are upgrading one or more Appliance Virtualization Platform to Release 8.1.

Before you begin
• Take a backup of Utility Services manually.
• Add a location.
  For more information, see “Adding a location” section in Administering Avaya Aura® System Manager.
• Select Location and add a host.
  For more information, see “Adding an Appliance Virtualization Platform or ESXi host” section in Administering Avaya Aura® System Manager.
• Download a copy of the hostUSUpgradeInfo.xlsx spreadsheet from Avaya PLDS website at https://plds.avaya.com or from Avaya Support website at https://support.avaya.com. Fill the required system details in the spreadsheet.
  Note: If you provide the incorrect data in the spreadsheet, the upgrade might fail.

Procedure
1. In Application Management Tree, select a location.

2. On the Platforms tab, in the Platforms for Selected Location <location name> section, select the Appliance Virtualization Platform host, and click More Actions > AVP Update/Upgrade Management.

   If Utility Services is not deployed on Appliance Virtualization Platform Release 7.x or trust is not established with the Utility Services application, and you click Upgrade/Update, then the system displays the following message.

   [AVP - <AVP Name in SDM>] Required Utility Services (US) VM is absent or not registered with this SDM instance. If absent, deploy US. If not registered, refresh host and then select US VM, and click More Options > Reestablish Connection.

3. In Select patch file, provide the absolute path to the patch file of the host, and click AVPU Configuration Import.

   For example, the absolute path on your computer can be C:\tmp\avp\upgrade-avaya-avp-8.1.0.0.0.xx.zip.

4. In the Import Configuration Excel File dialog box, do the following:
   a. Click Browse and select the file from the local computer.
b. To upload the spreadsheet, click **Open**.
   The system displays the file size and percentage complete for the uploaded file.
   When the file upload is in-progress, do not navigate away from the page.

c. Click **Submit File**.

5. Click **Update Host** and accept the EULA.

6. To view the details, in the **Current Action** column, click **Status Details**.

   Host Create/Update Status window displays the details. The patch installation takes some time. When the patch installation is complete, the **Current Action** column displays the status.

   In the Platforms for Selected Location <location name> section, the system displays the update status in the **Current Action** column.

---

**Upgrading Appliance Virtualization Platform from Solution Deployment Manager**

**About this task**

Upgrade Appliance Virtualization Platform from Release 7.0.x, 7.1.x, or 8.0.x to Release 8.1 by using the upgrade bundle from the Solution Deployment Manager client or System Manager Solution Deployment Manager.

**Note:**

- From System Manager Solution Deployment Manager, you cannot update Appliance Virtualization Platform that hosts this System Manager.

- When you update Appliance Virtualization Platform, the system shuts down all the associated virtual machines and restarts the Appliance Virtualization Platform host. During the update process, the virtual machines will be out of service. After the Appliance Virtualization Platform update is complete, the system restarts the virtual machines.

- If you are upgrading or updating the Appliance Virtualization Platform host, then you must not restart, shutdown, upgrade, or install the patch on the virtual machine that is hosted on the same Appliance Virtualization Platform host.

   If you are deploying or upgrading a virtual machine, then you must not restart, shutdown, or upgrade the Appliance Virtualization Platform host on which the same virtual machine is hosted.

   If you are installing a patch on a virtual machine, then you must not restart, shutdown, or upgrade the Appliance Virtualization Platform host on which the same virtual machine is hosted.

- If you are using services port to update or upgrade Appliance Virtualization Platform, connect the system directly with the Appliance Virtualization Platform services port (Gateway 192.168.13.1). If you connect the system using the AVP Utilities services port (Gateway 192.11.13.6), the Appliance Virtualization Platform update or upgrade fails.
Before you begin

1. Add a location.
2. Select Location and add an Appliance Virtualization Platform host.

To upgrade from Appliance Virtualization Platform Release 7.x or 8.0.x to Release 8.1, ensure that:

• AVP Utilities is deployed on Release 8.1.
• Utility Services 7.x is deployed on Appliance Virtualization Platform Release 7.x and trust is established with the application.
• Appliance Virtualization Platform 7.x is not deployed on S8300D, Dell™ PowerEdge™ R610, or HP ProLiant DL360 G7 as the upgrade to Appliance Virtualization Platform 8.0 and later is not supported on these servers.

**Note:**

Install only Avaya-approved service packs or software patches on Appliance Virtualization Platform. Do not install the software patches that are downloaded directly from VMware®.

Procedure

1. In **Application Management Tree**, select a location.
2. On the **Platforms** tab, in the Platforms for Selected Location <location name> section, select the Appliance Virtualization Platform host, and click **More Actions > AVP Update/Upgrade Management**.

   If Utility Services is not deployed on Appliance Virtualization Platform Release 7.x or trust is not established with the Utility Services application, and you click **Upgrade/Update**, then the system displays the following message.

   
   ```
   [AVP - <AVP Name in SDM>] Required Utility Services (US) VM is absent or not registered with this SDM instance. If absent, deploy US. If not registered, refresh host and then select US VM, and click More Options > Reestablish Connection.
   ```

3. In **Select patch file**, provide the absolute path to the patch file of the host, and click **Update Host**.

   For Solution Deployment Manager Client, the patch file must be available on windows machine where the Solution Deployment Manager client is hosted.

   For example, the absolute path on your computer can be `C:\tmp\avp\upgrade-avaya-avp-8.1.0.0.0.xx.zip`.

   For System Manager Solution Deployment Manager, the patch file must be in the System Manager swlibrary directory.

4. Note that, if you attempt to upgrade Appliance Virtualization Platform to Release 8.0 and later on S8300D, Dell™ PowerEdge™ R610, or HP ProLiant DL360 G7 server, the system displays the following message.

   ```
   [AVP - <IP_Address>] You are attempting to Update / Upgrade this AVP on host hardware that is not supported for this software version: Avaya Common Server R1 (HP DL360G7 or Dell R610) and the
Avaya S8300D blade are deprecated for this release. Please refer to the Release Notes for this release for details of the supported host hardware.

5. **(Optional)** On the AVP Update/Upgrade - Enhanced Access Security Gateway (EASG) User Access window, read the following messages, and do one of the following:

When you upgrade Appliance Virtualization Platform from Release 7.0.x to Release 7.1 and later, the system display the AVP Update/Upgrade - Enhanced Access Security Gateway (EASG) User Access window.

**Enable:** *(Recommended)*

By enabling Avaya Logins you are granting Avaya access to your system. This is necessary to maximize the performance and value of your Avaya support entitlements, allowing Avaya to resolve product issues in a timely manner.

In addition to enabling the Avaya Logins, this product should be registered with Avaya and technically onboarded for remote connectivity and alarming. Please see the Avaya support site (support.avaya.com/registration) for additional information for registering products and establishing remote access and alarming.

**Disable:**

By disabling Avaya Logins you are preventing Avaya access to your system. This is not recommended, as it impacts Avaya’s ability to provide support for the product. Unless the customer is well versed in managing the product themselves, Avaya Logins should not be disabled.

a. To enable EASG, click **Enable EASG**.

   Avaya recommends to enable EASG.

   You can also enable EASG after deploying or upgrading the application by using the command: `EASGManage --enableEASG`.

b. To disable EASG, click **Disable EASG**.

6. If Utility Services is deployed on Appliance Virtualization Platform Release 7.x, the system upgrades Appliance Virtualization Platform to Release 8.1, and then updates Utility Services to AVP Utilities.

   This step is applicable when you upgrade from Release 7.x to Release 8.1.

   The system displays the Utility Services Upgrade window.

7. On the Utility Services Upgrade window, do the following:

   a. In **Platform Details**, the data store is auto-selected as server-local-disk, and then click **Next**.

   b. In **OVA**, provide the AVP Utilities OVA file details, and then click **Next**.
For AVP Utilities OVA, the system automatically performs the resource check and disables the **Flexi Footprint** field.

c. In Config Parameters, provide the network and configuration parameters details, and click **Update**.

8. On the EULA Acceptance page, read the EULA, and do one of the following:

   This step is applicable when you upgrade from Release 7.x to Release 8.1.

   a. To accept the EULA, click **Accept**.

   b. To decline the EULA, click **Decline**.

   Once Appliance Virtualization Platform is upgraded, the system updates Utility Services to AVP Utilities.

9. To view the details, in the **Current Action** column, click **Status Details**.

   Host Create/Update Status window displays the details. The patch installation takes some time. When the patch installation is complete, the **Current Action** column displays the status.

   In the Platforms for Selected Location <location name> section, the system displays the update status in the **Current Action** column.

**Next steps**

If the virtual machines that were running on the Appliance Virtualization Platform host do not automatically start, manually start the machines.
Chapter 7: Troubleshooting

Checklist to rollback to previous version of Utility Services

After Appliance Virtualization Platform is upgraded and AVP Utilities is successfully deployed, the Utility Services virtual machine is automatically removed and the AVP Utilities virtual machine is available. However, for any reason, if you want to rollback to the previous version of Utility Services, then you must rollback Appliance Virtualization Platform and restore Utility Services.

Perform the following tasks to rollback to previous version of Utility Services:

<table>
<thead>
<tr>
<th>No.</th>
<th>Task</th>
<th>Link</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Delete AVP Utilities</td>
<td>See <a href="#">Deleting an application</a> on page 40</td>
</tr>
<tr>
<td>2</td>
<td>Rollback Appliance Virtualization Platform to previous version</td>
<td>See <a href="#">Removing the Appliance Virtualization Platform patch from the ESXi host CLI</a> on page 40</td>
</tr>
<tr>
<td>3</td>
<td>Do one of the following:</td>
<td>See <a href="#">Generating and accepting the Appliance Virtualization Platform host certificates</a> on page 43, <a href="#">Adding a software-only platform</a> on page 44</td>
</tr>
<tr>
<td></td>
<td>1. Remove the Appliance Virtualization Platform host certificate</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. Add the Appliance Virtualization Platform platform</td>
<td></td>
</tr>
<tr>
<td></td>
<td>OR</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. Accept the Appliance Virtualization Platform host certificate</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. Refresh the Appliance Virtualization Platform platform</td>
<td></td>
</tr>
</tbody>
</table>

*Note:* Before adding the Appliance Virtualization Platform platform, delete the existing Appliance Virtualization Platform platform.

Table continues…

<td>See Restoring AVP Utilities backup files on page 49</td>
</tr>
</tbody>
</table>

### Deleting an application

**Procedure**

1. On the System Manager web console, click Services > Solution Deployment Manager > Application Management.
2. In Application Management Tree, select a location.
3. On the Applications tab, select one or more application.
4. On the Delete page, click Delete, and click Yes to confirm the deletion.

   The system turns off the applications, and deletes the selected applications from the platform.

### Removing the Appliance Virtualization Platform patch from the ESXi host CLI

**About this task**

Use the procedure to restore the Appliance Virtualization Platform software to the earlier version.

In this procedure, the command installs the older release on the new release that you want to replace.
**Note:**

You can remove the Appliance Virtualization Platform patch only from the host CLI. You cannot use System Manager Solution Deployment Manager or the Solution Deployment Manager client.

**Before you begin**

- Create a backup of each Avaya Aura® application that is deployed on Appliance Virtualization Platform by using the application’s native backup procedures.
  
  If a problem occurs with the Appliance Virtualization Platform rollback, you can use the application backups to reinstall the applications and to restore its data.

- Start an SSH session.

- Log in to the Appliance Virtualization Platform host command line with admin user credentials.

- Copy the Appliance Virtualization Platform patch of the earlier version to the `/vmfs/volumes/server-local-disk` folder on the system.

**Procedure**

1. To stop all virtual machines that are running on the Appliance Virtualization Platform host, at the prompt, type `/opt/avaya/bin/stopallvms.py`.

2. To rollback from Appliance Virtualization Platform Release 8.0 and later to any of the previous releases, perform the following:

   a. Type the `/opt/avaya/bin/rollback_bootbank.sh /vmfs/volumes/server-local-disk/<complete path name of the rollback patch>` command.

      Ensure to type the complete path name of the rollback patch. Do not use a relative path.

      For example, to rollback from Appliance Virtualization Platform Release 8.0 to Release 7.0.0.x (avaya-avp-7.0.0.1.0.x.zip), type the following command:

      `/opt/avaya/bin/rollback_bootbank.sh /vmfs/volumes/server-local-disk/avaya-avp-7.0.0.1.0.x.zip`

   b. To reboot the system, type `/opt/avaya/bin/avpshutdown.sh -r`.

      The system must be rebooted.

3. To rollback from Appliance Virtualization Platform Release 7.1.3 and later to any of the previous releases, perform the following:

   a. Type the `/opt/avaya/bin/rollback_bootbank.sh /vmfs/volumes/server-local-disk/<complete path name of the rollback patch>` command.

      Ensure to type the complete path name of the rollback patch. Do not use a relative path.

      For example, to rollback from Appliance Virtualization Platform Release 7.1.3 to Release 7.0.0.x (avaya-avp-7.0.0.1.0.x.zip), type the following command:
To rollback from Appliance Virtualization Platform Release 7.1.2 to Release 7.1.0.x, perform the following:

a. Type the `/opt/avaya/bin/rollback_bootbank.sh /vmfs/volumes/server-local-disk/avaya-avp-7.1.0.0.0.x.zip` command.

Ensure to type the complete path name of the rollback patch. Do not use a relative path.

b. To reboot the system, type `/opt/avaya/bin/avpshutdown.sh -r`.

The system must be rebooted.

When the system is rebooted, start a new Appliance Virtualization Platform SSH session.

c. To re-enable SSH by using the Solution Deployment Manager client, on Application Management, click **More Actions > Enable SSH**.

You can also enable SSH by using the VMware vSphere client.

Issue the following commands after reboot:

```
/opt/avaya/bin/reduceReservation.sh
/opt/avaya/bin/installvibs.sh
reboot
```

5. To rollback from Appliance Virtualization Platform Release 7.1.2 to Release 7.0.0.x, perform the following:

a. Type the `/opt/avaya/bin/rollback_bootbank.sh /vmfs/volumes/server-local-disk/avaya-avp-7.0.0.1.0.x.zip` command.

Ensure to type the complete path name of the rollback patch. Do not use a relative path.

b. Run the following by typing line-by-line or using cut and paste on the Appliance Virtualization Platform CLI.

```
ramgb=$(($(esxcli --formatter=keyvalue hardware memory get \ | grep -e "Memory\:PhysicalMemory\:integer" \ | cut -d "=" -f 2) / (1024 * 1024 * 1024)))
if [ "$ramgb" -le 48 ]; then
    memMinFreePct=1
    if [ "$ramgb" -le 16 ]; then
        memMinFreePct=2
    fi
    esxcli system settings advanced set -o /Mem/MemMinFreePct -i $memMinFreePct
fi
```

c. To reboot the system, type `/opt/avaya/bin/avpshutdown.sh -r`.

The system must be rebooted.
When the system is rebooted, start a new Appliance Virtualization Platform SSH session.

d. To re-enable SSH by using the Solution Deployment Manager client, on Application Management, click **More Actions > Enable SSH**.

   You can also enable SSH by using the VMware vSphere client.

**Issue the following commands after reboot:**

```
/opt/avaya/bin/reduceReservation.sh
/opt/avaya/bin/installvibs.sh
reboot
```

6. To rollback from Appliance Virtualization Platform Release 7.0.1.0.5 or 7.1.0.x to Release 7.0.0.0.0.21, type `./opt/avaya/bin/rollback_bootbank.sh /vmfs/volumes/server-local-disk/<avaya-avp-7.0.0.0.0.21.zip>`.

**Next steps**

Verify the Appliance Virtualization Platform software release and the ESXi version by using the `cat /opt/avaya/etc/avaya-avp.version` command.

---

**Generating and accepting the Appliance Virtualization Platform host certificates**

**About this task**

With Solution Deployment Manager, you can generate certificates only for Appliance Virtualization Platform hosts.

If the certificate is invalid:

- Get a correct certificate for the host and add the certificate.
- Regenerate a self-signed certificate on the host.

**Before you begin**

Get permissions to add a host to generate certificates.

**Procedure**

1. To access Solution Deployment Manager, do one of the following:
   - On the System Manager web console, click **Services > Solution Deployment Manager**.
   - On the desktop, click the Solution Deployment Manager icon (SDM).

2. In **Application Management Tree**, select a location.

3. On the **Platforms** tab, in the Platforms for Selected Location `<location name>` area, select an Appliance Virtualization Platform host.
4. Click More Actions > Generate/Accept Certificate.

5. In the Certificate dialog box, click the following:
   a. Generate Certificate
      You can generate certificate only for the Appliance Virtualization Platform host.
   b. Accept Certificate
      Appliance Virtualization Platform places an IP address and FQDN in generated certificates. Therefore, from Solution Deployment Manager, you can connect to Appliance Virtualization Platform hosts through IP address or FQDN.

      In the Platforms for Selected Location <location name> section, the Platform Certificate Status column must display a check mark.

---

### Adding a software-only platform

**About this task**

Use this procedure to add an operating system on Solution Deployment Manager. In Release 8.1, the system supports the Red Hat Enterprise Linux Release 7.5 64-bit operating system.

**Before you begin**

Add a location.

**Procedure**

1. On the Platforms tab, click Add.
2. In Platform Name, type the name of the platform.
3. In Platform FQDN or IP, type the FQDN or IP address of the platform or the base operating system.
4. In User Name, type the user name of the platform.
   For a software-only deployment, the user name must be a direct access admin user. If the software-only application is already deployed, provide the application cli user credentials.
5. In Password, type the password of the platform.
6. In Platform Type, select OS.
7. Click Save.

   If the platform has some applications running, the system automatically discovers those applications and displays the applications in the Applications tab.
   
   • If Solution Deployment Manager is unable to establish trust, the system displays the application as Unknown.
   • If you are adding OS, only Add and Remove operations are available on the Platforms tab. You cannot perform any other operations. On the Applications tab, the system
enables the New option. If the application is System Manager, the system enables Update App on Solution Deployment Manager Client.

The system displays the added platform on the Platforms tab.

---

### Deploying the Utility Services

**About this task**

Use the procedure to create a virtual machine on the ESXi host, and deploy Utility Services OVA on the Avaya-provided server.

To deploy Utility Services, you can use Solution Deployment Manager from System Manager or the Solution Deployment Manager client, when System Manager is unavailable. First deploy the Utility Services OVA and then deploy all other applications one at a time.

**Before you begin**

- Complete the deployment checklist.
  
  For information about the deployment checklist, see *Deploying Avaya Aura® applications from System Manager*.
- Add a location.
- Add Appliance Virtualization Platform
- Download the required OVA file

**Procedure**

1. To access Solution Deployment Manager, do one of the following:
   
   - On the System Manager web console, click **Services > Solution Deployment Manager**.
   
   - On the desktop, click the Solution Deployment Manager icon 🟩.

2. In **Application Management Tree**, select a platform.

3. On the Applications tab, in the Applications for Selected Location <location name> section, click **New**.

   The system displays the Applications Deployment section.

4. In the Select Location and Platform section, do the following:
   
   a. In **Select Location**, select a location.
   
   b. In **Select Platform**, select a platform.

   The system displays the host name in the **Platform FQDN** field.

5. In **Data Store**, select a data store, if not displayed upon host selection.

   The page displays the capacity details.
6. Click Next.

7. In the Deploy OVA section, perform the following:
   a. In Select Software Library, select the local or remote library where the OVA file is available.
      If you are deploying the OVA from the Solution Deployment Manager client, you can use the default software library that is set during the client installation.
   b. In Select OVAs, select the OVA file that you want to deploy.
   c. In Flexi Footprint, select the footprint size that the application supports.
      • Default: For all other server platforms.

8. Click Next.

   In Configuration Parameters and Network Parameters sections, the system displays the fields that are specific to the application that you deploy.

9. In the Network Parameters section, ensure that the following fields are preconfigured:
   • Public
   • Services: Only for Utility Services
   • Out of Band Management: Only if Out of Band Management is enabled

10. In the Configuration Parameters section, complete the fields.

    For more information about Configuration Parameters, see Network Parameters and Configuration Parameters field descriptions.

11. Click Deploy.

12. Click Accept the license terms.

   In the Platforms for Selected Location <location name> section, the system displays the deployment status in the Current Action Status column.

   The system displays the virtual machine on the Applications for Selected Location <location name> page.

13. To view details, click the Status Details link.

    For information about Application Management field descriptions, see Deploying Avaya Aura® applications from System Manager.

14. Reboot the Utility Services virtual machine.

---

**Restoring a backup of Utility Services**

**Procedure**

1. Use an account with administrator-level privileges to log on to the Avaya Aura® Utility Services System Management Interface (SMI) webpage.
2. Click **Utility Services** > **Utility Admin**.

3. In the navigation pane on the left side of the page, click **Miscellaneous** > **Utility Services Backup and Restore**.

4. Click **Browse** and select the backup file that you want to restore from the local machine.

5. Click **Upload Backup**.
   - The system restores the backup file.

6. Click **Continue**.

---

### Rolling back to Utility Services

**About this task**

Use this procedure to rollback Utility Services to 7.x if the upgrade from Utility Services to AVP Utilities fails from Release 7.x to Release 8.1 and later.

**Before you begin**

- Add a location.
- Select Location and add a host.

**Procedure**

1. In **Application Management Tree**, select a location.

2. On the **Applications** tab, in the Applications for Selected Location section, select the Utility Services application, and click **More Actions** > **Rollback/Retry**.

   If the **Current Action Status** column displays the **VM Upgrade Failed** message, the system enables **More Actions** > **Rollback/Retry** after selecting the Utility Services application.

3. In the Import Configuration Excel File dialog box, click **Rollback**.

   To upgrade Utility Services to AVP Utilities, use the Upgrade Management page of System Manager Solution Deployment Manager.

   The system displays the confirmation message to accept the rollback.

---

### Retrying Utility Services to AVP Utilities upgrade

**About this task**

If the upgrade from Utility Services to AVP Utilities fails, use this procedure to retry the upgrade of Utility Services to AVP Utilities.
Before you begin

- Add a location.
- Select Location and add a host.
- Download a copy of the hostUSUpgradeInfo.xlsx spreadsheet from Avaya PLDS website at https://plds.avaya.com or from Avaya Support website at https://support.avaya.com. Fill the required system details in the spreadsheet.

⚠️ Note:

If you provide the incorrect data in the spreadsheet, the upgrade might fail.

Procedure

1. In Application Management Tree, select a location.
2. On the Applications tab, in the Applications for Selected Location<location name> section, select the Utility Services application, and click More Actions > Rollback/Retry.

   If the Current Action Status column displays the VM Upgrade Failed message, the system enables More Actions > Rollback/Retry after selecting the Utility Services application.

3. On the Import Configuration Excel File dialog box, do the following:
   a. Click Browse and select the file from the local computer.
   b. To upload the spreadsheet, click Open.
      The system displays the file size and percentage complete for the uploaded file. When the file upload is in-progress, do not navigate away from the page.
   c. Click Submit File.
      Once the file is successfully uploaded, the system enables the Retry button.
   d. Click Retry.
      The system starts the upgrade of Utility Services to AVP Utilities.

Creating a backup of AVP Utilities

About this task

When you backup AVP Utilities, the following configuration files are included:

- SSH
- AIDE: /etc/aide.conf
- Audit: /etc/audit/auditd.conf
- Login defs: /etc/login.defs
- Password auth: /etc/pam.d/password-auth
• Password settings: /etc/security/pwquality.conf
• User passwords and group membership:
  - /etc/passwd
  - /etc/shadow
  - /etc/group
  - /etc/gshadow
• rsyslog: /etc/rsyslog.conf
• selinux: /etc/selinux/config
• Access Control List (ACL):
  - /etc/hosts.allow
  - /etc/hosts.deny
• Banner: /etc/issue

Procedure
1. Log in to the AVP Utilities CLI as an administrator.
2. To create a backup, run the following script: /opt/avaya/common_services/backup -b

Result
• Backup files are placed in the /tmp folder.

---

Restoring AVP Utilities backup files

Procedure
1. Log in to the AVP Utilities CLI as an administrator.
2. To restore the backup file, run the following script: /opt/avaya/common_services/backup -r

Result
Backup files must be restored in the /tmp folder.

---

Uninstalling the feature pack or service pack by using Solution Deployment Manager

Procedure
1. On the System Manager web console, click Services > Solution Deployment Manager.
2. In the left navigation pane, click Upgrade Management.
3. Select AVP Utilities, and click **Upgrade Actions > Installed Patches**.

4. In the **Patch Operation**, select **Uninstall**.

5. Select the patch that you want to uninstall.

6. Set the **Schedule Job** options as required, and click **Schedule**.
Chapter 8: Resources

AVP Utilities documentation

The following table lists the documents related to Avaya Aura® AVP Utilities. Download the documents from the Avaya Support website at http://support.avaya.com.

<table>
<thead>
<tr>

Finding documents on the Avaya Support website

Procedure

2. At the top of the screen, type your username and password and click Login.
3. Click Support by Product > Documents.
4. In Enter your Product Here, type the product name and then select the product from the list.
5. In Choose Release, select an appropriate release number.
6. In the Content Type filter, click a document type, or click Select All to see a list of all available documents.
   For example, for user guides, click User Guides in the Content Type filter. The list displays the documents only from the selected category.
7. Click Enter.
Accessing the port matrix document

Procedure
2. Log on to the Avaya website with a valid Avaya user ID and password.
4. In Enter Your Product Here, type the product name, and then select the product from the list of suggested product names.
5. In Choose Release, select the required release number.
6. In the Content Type filter, select one or more of the following categories:
   - Application & Technical Notes
   - Design, Development & System Mgt
   The list displays the product-specific Port Matrix document.
7. Click Enter.

Avaya Documentation Portal navigation
Customer documentation for some programs is now available on the Avaya Documentation Portal at https://documentation.avaya.com.

⚠ Important:
For documents that are not available on the Avaya Documentation Portal, click Support on the top menu to open https://support.avaya.com.

Using the Avaya Documentation Portal, you can:
- Search for content in one of the following ways:
  - Type a keyword in the Search field.
  - Type a keyword in Search, and click Filters to search for content by product, release, and document type.
  - Select a product or solution and then select the appropriate document from the list.
- Find a document from the Publications menu.
- Publish a PDF of the current section in a document, the section and its subsections, or the entire document.
- Add content to your collection by using My Docs (⭐).
Navigate to the My Content > My Docs menu, and do any of the following:
- Create, rename, and delete a collection.
- Add content from various documents to a collection.
- Save a PDF of selected content in a collection and download it to your computer.
- Share content in a collection with others through email.
- Receive content that others have shared with you.

* Add yourself as a watcher by using the Watch icon (○).

Navigate to the My Content > Watch list menu, and do the following:
- Set how frequently you want to be notified, starting from every day to every 60 days.
- Unwatch selected content, all content in a document, or all content on the Watch list page.

As a watcher, you are notified when content is updated or deleted from a document, or the document is removed from the portal.

• Share a section on social media platforms, such as Facebook, LinkedIn, Twitter, and Google +.
• Send feedback on a section and rate the content.

⚠️ Note:
Some functionality is only available when you log in to the portal. The available functionality depends on the role with which you are logged in.

Training
The following courses are available on the Avaya Learning website at http://www.avaya-learning.com. After logging in to the website, enter the course code or the course title in the Search field and press Enter or click > to search for the course.

Viewing Avaya Mentor videos
Avaya Mentor videos provide technical content on how to install, configure, and troubleshoot Avaya products.
About this task

Videos are available on the Avaya Support website, listed under the video document type, and on the Avaya-run channel on YouTube.

- To find videos on the Avaya Support website, go to https://support.avaya.com/ and do one of the following:
  - In Search, type Avaya Mentor Videos to see a list of the available videos.
  - In Search, type the product name. On the Search Results page, select Video in the Content Type column on the left.

- To find the Avaya Mentor videos on YouTube, go to www.youtube.com/AvayaMentor and do one of the following:
  - Enter a key word or key words in the Search Channel to search for a specific product or topic.
  - Scroll down Playlists, and click the name of a topic to see the available list of videos posted on the website.

⚠️ Note:

Videos are not available for all products.

Support

Go to the Avaya Support website at https://support.avaya.com for the most up-to-date documentation, product notices, and knowledge articles. You can also search for release notes, downloads, and resolutions to issues. Use the online service request system to create a service request. Chat with live agents to get answers to questions, or request an agent to connect you to a support team if an issue requires additional expertise.

Using the Avaya InSite Knowledge Base

The Avaya InSite Knowledge Base is a web-based search engine that provides:

- Up-to-date troubleshooting procedures and technical tips
- Information about service packs
- Access to customer and technical documentation
- Information about training and certification programs
- Links to other pertinent information

If you are an authorized Avaya Partner or a current Avaya customer with a support contract, you can access the Knowledge Base without extra cost. You must have a login account and a valid Sold-To number.
Use the Avaya InSite Knowledge Base for any potential solutions to problems.

2. Log on to the Avaya website with a valid Avaya user ID and password.
   The system displays the Avaya Support page.
3. Click Support by Product > Product Specific Support.
4. In Enter Product Name, enter the product, and press Enter.
5. Select the product from the list, and select a release.
6. Click the Technical Solutions tab to see articles.
7. Select relevant articles.
Appendix A: Deploying AVP Utilities and other virtual machines

Deploying AVP Utilities and virtual machines when Out of Band Management is enabled

Before you begin
Install the Solution Deployment Manager client on your computer.

Procedure

1. Connect the computer to the Out of Band Management network with access to the Appliance Virtualization Platform Management Network IP address that you configured in the kick start generator file.

2. Using the Solution Deployment Manager client, create a location.

3. In the location that you created, create a host of Appliance Virtualization Platform by using the Management Network IP address of Appliance Virtualization Platform.

4. Ensure that AVP Utilities OVA is saved in the sub-folder in the Default_Artifacts directory during the Solution Deployment Manager client installation.
   You can save OVA files of all virtual machines that you want to deploy.

5. Create a new virtual machine in the host that you created in Step 3.

6. To set the OVA software library, select the complete path to the Default_Artifacts directory.
   In the Configuration Parameters section, the page displays parameters that are specific to AVP Utilities.

7. Fill in the AVP Utilities parameters.
   Provide the IP address that you want to allocate to Communication Manager.
   If Out of Band Management is enabled, provide information in the Out of Band Management-related fields. If Out of Band Management is disabled, leave the fields blank.

8. Deploy AVP Utilities, and wait for the virtual machine to deploy successfully.

Note:
Before installing any service pack or feature pack, you must remove any pre-installed Service packs or Feature packs from the system. To verify the pre-installed service pack or feature pack installation status, run the `swversion` command from the command line interface. To remove the pre-installed service packs/feature packs run the `update -e <service tag>` command. Service and Feature packs are cumulative and include all of the security remediation and bug fixes of previous service or feature packs.

10. Deploy all other virtual machines in the solution one after the other.
11. Install the feature pack for Avaya Aura® applications.
12. Validate the system.

Enabling IP forwarding using Services Port VM for AVP Utilities

Deploying AVP Utilities and virtual machines on the services port

Before you begin
• Download the Solution Deployment Manager client from the PLDS website.
• Install the Solution Deployment Manager client on your computer.

Procedure
1. Using the Solution Deployment Manager client, create a location.
2. To connect the computer to the services port on the server, configure the following:
   • **IP address**: 192.168.13.5
   • **Netmask**: 255.255.255.248
   • **Gateway**: 192.168.13.1

   On the Solution Deployment Manager client, in the Appliance Virtualization Platform host, provide the IP address 192.168.13.6.
3. In the location that you created, create a host of Appliance Virtualization Platform by using the Management Network IP address of Appliance Virtualization Platform.
4. Ensure that AVP Utilities OVA is saved in the sub-folder in the `Default_Artifacts` directory during the Solution Deployment Manager client installation.
   You can save OVA files of all virtual machines that you want to deploy.
5. Create a new virtual machine in the host that you created in Step 3.
6. To set the OVA software library, select the complete path to the Default_Artifacts directory.

   In the Configuration Parameters section, the page displays parameters that are specific to AVP Utilities.

7. Enter the IP address details for AVP Utilities, deploy AVP Utilities, and wait for the virtual machine to deploy successfully.

8. Install the AVP Utilities 8.1 feature pack.

   **Note:**

   Before installing any service pack or feature pack, you must remove any pre-installed Service packs or Feature packs from the system. To verify the pre-installed service pack or feature pack installation status, run the `swversion` command from the command line interface. To remove the pre-installed service packs/feature packs run the `update -e <service tag>` command. Service and Feature packs are cumulative and include all of the security remediation and bug fixes of previous service or feature packs.

9. Change the AVP Utilities configuration parameters to the following:

   - **IP address:** 192.11.13.5
   - **Netmask:** 255.255.255.252
   - **Gateway:** 192.11.13.6

   On the Solution Deployment Manager client, in the Appliance Virtualization Platform host, leave the IP address as 192.168.13.6.
10. **(Optional)** If you want to deploy or access virtual machine using services port while Wi-Fi or other network connection is enabled, then go to **Network & Internet settings** of your computer and enter the values as shown below.

![Internet Protocol Version 4 (TCP/IPv4) Properties](image)

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

- **Obtain an IP address automatically**
  - **Use the following IP address:**
    - **IP address:** 192.168.13.5
    - **Subnet mask:** 255.255.255.248
    - **Default gateway:** 192.168.13.1

- **Obtain DNS server address automatically**
  - **Use the following DNS server addresses:**
    - **Preferred DNS server:**
    - **Alternate DNS server:**

- **Validate settings upon exit**

[Advanced...]
11. Ensure that the IP forwarding feature is enabled on AVP Utilities.

12. Deploy all other virtual machines in the solution one after the other.

13. **(Optional)** During the deployment, if the sanity check fails, verify the host network configuration.

   The deployment might be successful, however, sanity check can fail due to a bad network connection.

14. Install the feature pack for Avaya Aura® applications.

15. Validate the system.
