

Using Avaya Agent for Desktop

© 2014-2020, Avaya Inc. All Rights Reserved.

Notice

While reasonable efforts have been made to ensure that the information in this document is complete and accurate at the time of printing, Avaya assumes no liability for any errors. Avaya reserves the right to make changes and corrections to the information in this document without the obligation to notify any person or organization of such changes.

Documentation disclaimer

"Documentation" means information published in varying mediums which may include product information, operating instructions and performance specifications that are generally made available to users of products. Documentation does not include marketing materials. Avaya shall not be responsible for any modifications, additions, or deletions to the original published version of Documentation unless such modifications, additions, or deletions were performed by or on the express behalf of Avaya. End User agrees to indemnify and hold harmless Avaya, Avaya's agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation, to the extent made by End User.

Link disclaimer

Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or Documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

Warranty

Avaya provides a limited warranty on Avaya hardware and software. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya's standard warranty language, as well as information regarding support for this product while under warranty is available to Avaya customers and other parties through the Avaya Support website: https://support.avaya.com/helpcenter/getGenericDetails?detailld=C20091120112456651010 under the link "Warranty & Product Lifecycle" or such successor site as designated by Avaya. Please note that if You acquired the product(s) from an authorized Avaya Channel Partner outside of the United States and Canada, the warranty is provided to You by said Avaya Channel Partner and not by Avaya.

"Hosted Service" means an Avaya hosted service subscription that You acquire from either Avaya or an authorized Avaya Channel Partner (as applicable) and which is described further in Hosted SAS or other service description documentation regarding the applicable hosted service. If You purchase a Hosted Service subscription, the foregoing limited warranty may not apply but You may be entitled to support services in connection with the Hosted Service as described further in your service description documents for the applicable Hosted Service. Contact Avaya or Avaya Channel Partner (as applicable) for more information.

Hosted Service

THE FOLLOWING APPLIES ONLY IF YOU PURCHASE AN AVAYA HOSTED SERVICE SUBSCRIPTION FROM AVAYA OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE), THE TERMS OF USE FOR HOSTED SERVICES ARE AVAILABLE ON THE AVAYA WEBSITE, HTTPS://SUPPORT.AVAYA.COM/LICENSEINFO UNDER THE LINK "Avaya Terms of Use for Hosted Services" OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, AND ARE APPLICABLE TO ANYONE WHO ACCESSES OR USES THE HOSTED SERVICE. BY ACCESSING OR USING THE HOSTED SERVICE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE DOING SO (HEREINAFTER REFERRED TO INTERCHANGEABLY AS "YOU" AND "END USER"), AGREE TO THE TERMS OF USE. IF YOU ARE ACCEPTING THE TERMS OF USE ON BEHALF A COMPANY OR OTHER LEGAL ENTITY, YOU REPRESENT THAT YOU HAVE THE AUTHORITY TO BIND SUCH ENTITY TO THESE TERMS OF USE. IF YOU DO NOT HAVE SUCH AUTHORITY, OR IF YOU DO NOT WISH TO ACCEPT THESE TERMS OF USE, YOU MUST NOT ACCESS OR USE THE HOSTED SERVICE OR AUTHORIZE ANYONE TO ACCESS OR USE THE HOSTED SERVICE.

Licenses

THE SOFTWARE LICENSE TERMS AVAILABLE ON THE AVAYA WEBSITE, HTTPS://SUPPORT.AVAYA.COM/LICENSEINFO UNDER THE LINK "AVAYA SOFTWARE LICENSE TERMS (Avaya Products)" OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, ARE APPLICABLE TO ANYONE WHO DOWNLOADS, USES AND/OR INSTALLS AVAYA SOFTWARE, PURCHASED FROM AVAYA INC., ANY AVAYA AFFILIATE, OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE) UNDER A COMMERCIAL AGREEMENT WITH AVAYA OR AN AVAYA CHANNEL PARTNER. UNLESS OTHERWISE AGREED TO BY AVAYA IN WRITING AVAYA DOES NOT EXTEND THIS LICENSE IF THE SOFTWARE WAS OBTAINED FROM ANYONE OTHER THAN AVAYA, AN AVAYA AFFILIATE OR AN AVAYA CHANNEL PARTNER; AVAYA RESERVES THE RIGHT TO TAKE LEGAL ACTION AGAINST YOU AND ANYONE ELSE USING OR SELLING THE SOFTWARE WITHOUT A LICENSE. BY INSTALLING, DOWNLOADING OR USING THE SOFTWARE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE INSTALLING, DOWNLOADING OR USING THE SOFTWARE (HEREINAFTER REFERRED TO INTERCHANGEABLY AS "YOU" AND "END USER"), AGREE TO THESE TERMS AND CONDITIONS AND CREATE A BINDING CONTRACT BETWEEN YOU AND AVAYA INC. OR THE APPLICABLE AVAYA AFFILIATE ("AVAYA").

Avaya grants You a license within the scope of the license types described below, with the exception of Heritage Nortel Software, for which the scope of the license is detailed below. Where the order documentation does not expressly identify a license type, the applicable license will be a Designated System License as set forth below in the Designated System(s) License (DS) section as applicable. The applicable number of licenses and units of capacity for which the license is granted will be one (1), unless a different number of licenses or units of capacity is specified in the documentation or other materials available to You. "Software" means computer programs in object code, provided by Avaya or an Avaya Channel Partner, whether as stand-alone products, pre-installed on hardware products, and any upgrades, updates, patches, bug fixes, or modified versions thereto. "Designated Processor" means a single stand-alone computing device. "Server" means a set of Designated Processors that hosts (physically or virtually) a software application to be accessed by multiple users. "Instance" means a single copy of the Software executing at a particular time: (i) on one physical machine; or (ii) on one deployed software virtual machine ("VM") or similar deployment.

License types

Concurrent User License (CU). End User may install and use the Software on multiple Designated Processors or one or more Servers, so long as only the licensed number of Units are accessing and using the Software at any given time as indicated in the order, Documentation, or as authorized by Avaya in writing. A "Unit" means the unit on which Avaya, at its sole discretion, bases the pricing of its licenses and can be, without limitation, an agent, port or user, an email or voice mail account in the name of a person or corporate function (e.g., webmaster or helpdesk), or a directory entry in the administrative database utilized by the Software that permits one user to interface with the Software. Units may be linked to a specific, identified Server or an Instance of the Software.

Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Hosted Service, or hardware provided by Avaya. All content on this site, the documentation, Hosted Service, and the product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, in whole or in part, including any code and software unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, and or use without the express

written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Virtualization

The following applies if the product is deployed on a virtual machine. Each product has its own ordering code and license types. Unless otherwise stated, each Instance of a product must be separately licensed and ordered. For example, if the end user customer or Avaya Channel Partner would like to install two Instances of the same type of products, then two products of that type must be ordered.

Third Party Components

"Third Party Components" mean certain software programs or portions thereof included in the Software or Hosted Service may contain software (including open source software) distributed under third party agreements ("Third Party Components"), which contain terms regarding the rights to use certain portions of the Software ("Third Party Terms"). As required, information regarding distributed Linux OS source code (for those products that have distributed Linux OS source code) and identifying the copyright holders of the Third Party Components and the Third Party Terms that apply is available in the products, Documentation or on Avaya's website at: https:// support.avaya.com/Copyright or such successor site as designated by Avaya. The open source software license terms provided as Third Party Terms are consistent with the license rights granted in these Software License Terms, and may contain additional rights benefiting You, such as modification and distribution of the open source software. The Third Party Terms shall take precedence over these Software License Terms, solely with respect to the applicable Third Party Components to the extent that these Software License Terms impose greater restrictions on You than the applicable Third Party

The following applies only if the H.264 (AVC) codec is distributed with the product. THIS PRODUCT IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION MAY BE OBTAINED FROM MPEG LA, L.L.C. SEE HTTP://WWW.MPEGLA.COM.

Service Provider

THE FOLLOWING APPLIES TO AVAYA CHANNEL PARTNER'S HOSTING OF AVAYA PRODUCTS OR SERVICES. THE PRODUCT OR HOSTED SERVICE MAY USE THIRD PARTY COMPONENTS SUBJECT TO THIRD PARTY TERMS AND REQUIRE A SERVICE PROVIDER TO BE INDEPENDENTLY LICENSED DIRECTLY FROM THE THIRD PARTY SUPPLIER. AN AVAYA CHANNEL PARTNER'S HOSTING OF AVAYA PRODUCTS MUST BE AUTHORIZED IN WRITING BY AVAYA AND IF THOSE HOSTED PRODUCTS USE OR EMBED CERTAIN THIRD PARTY SOFTWARE, INCLUDING BUT NOT LIMITED TO MICROSOFT SOFTWARE OR CODECS, THE AVAYA CHANNEL PARTNER IS REQUIRED TO INDEPENDENTLY OBTAIN ANY APPLICABLE LICENSE AGREEMENTS, AT THE AVAYA CHANNEL PARTNER'S EXPENSE, DIRECTLY FROM THE APPLICABLE THIRD PARTY SUPPLIER.

WITH RESPECT TO CODECS, IF THE AVAYA CHANNEL PARTNER IS HOSTING ANY PRODUCTS THAT USE OR EMBED THE H.264 CODEC OR H.265 CODEC, THE AVAYA CHANNEL PARTNER ACKNOWLEDGES AND AGREES THE AVAYA CHANNEL PARTNER IS RESPONSIBLE FOR ANY AND ALL RELATED FEES AND/OR ROYALTIES. THE H.264 (AVC) CODEC IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO: (I) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (II) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION FOR H.264 (AVC) AND H.265 (HEVC) CODECS

MAY BE OBTAINED FROM MPEG LA, L.L.C. SEE <u>HTTP://</u>WWW.MPEGLA.COM.

Compliance with Laws

You acknowledge and agree that it is Your responsibility for complying with any applicable laws and regulations, including, but not limited to laws and regulations related to call recording, data privacy, intellectual property, trade secret, fraud, and music performance rights, in the country or territory where the Avaya product is used.

Preventing Toll Fraud

"Toll Fraud" is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company's behalf). Be aware that there can be a risk of Toll Fraud associated with your system and that, if Toll Fraud occurs, it can result in substantial additional charges for your telecommunications services

Avaya Toll Fraud intervention

If You suspect that You are being victimized by Toll Fraud and You need technical assistance or support, call Technical Service Center Toll Fraud Intervention Hotline at +1-800-643-2353 for the United States and Canada. For additional support telephone numbers, see the Avaya Support website: https://support.avaya.com or such successor site as designated by Avaya.

Security Vulnerabilities

Information about Avaya's security support policies can be found in the Security Policies and Support section of https://support.avaya.com/security.

Suspected Avaya product security vulnerabilities are handled per the Avaya Product Security Support Flow (https://support.avaya.com/css/P8/documents/100161515).

Downloading Documentation

For the most current versions of Documentation, see the Avaya Support website: https://support.avaya.com, or such successor site as designated by Avaya.

Contact Avaya Support

See the Avaya Support website: https://support.avaya.com for product or Hosted Service notices and articles, or to report a problem with your Avaya product or Hosted Service. For a list of support telephone numbers and contact addresses, go to the Avaya Support website: https://support.avaya.com (or such successor site as designated by Avaya), scroll to the bottom of the page, and select Contact Avaya Support.

Trademarks

The trademarks, logos and service marks ("Marks") displayed in this site, the Documentation, Hosted Service(s), and product(s) provided by Avaya are the registered or unregistered Marks of Avaya, its affiliates, its licensors, its suppliers, or other third parties. Users are not permitted to use such Marks without prior written consent from Avaya or such third party which may own the Mark. Nothing contained in this site, the Documentation, Hosted Service(s) and product(s) should be construed as granting, by implication, estoppel, or otherwise, any license or right in and to the Marks without the express written permission of Avaya or the applicable third party.

Chapter 1: Introduction

Purpose

This document describes how to use product features and capabilities.

Change history

Issue	Date	Summary of changes
1,	August, 2020	The following sections have been updated/added in this release:
Release 2.0.6		Agent States
		Logging in to Avaya Agent for Desktop
		Prerequisites for using Avaya Agent for Desktop for standalone agent usage
		Prerequisites for using Avaya Agent for Desktop for VDI usage
		Prerequisites for using Avaya Agent for Desktop for remote agent usage
2, Release 2.0.6.7	Dec, 2020	Only Avaya Agent for Desktop overview section is refined in this release.

Intended audience

This document is intended for the personnel who deploy the product at a customer site.

Related resources

Viewing Avaya Mentor videos

Avaya Mentor videos provide technical content on how to install, configure, and troubleshoot Avaya products.

About this task

Videos are available on the Avaya Support website, listed under the video document type, and on the Avaya-run channel on YouTube.

- To find videos on the Avaya Support website, go to https://support.avaya.com/ and do one of the following:
 - In Search, type Avaya Mentor Videos, click Clear All and select Video in the Content Type.
 - In **Search**, type the product name. On the Search Results page, click **Clear All** and select **Video** in the **Content Type**.

The **Video** content type is displayed only when videos are available for that product.

In the right pane, the page displays a list of available videos.

- To find the Avaya Mentor videos on YouTube, go to www.youtube.com/AvayaMentor and do one of the following:
 - Enter a key word or key words in the **Search Channel** to search for a specific product or topic.
 - Scroll down Playlists, and click a topic name to see the list of videos available for the topic. For example, Contact Centers.

Videos are not available for all products.

Support

Go to the Avaya Support website at https://support.avaya.com for the most up-to-date documentation, product notices, and knowledge articles. You can also search for release notes, downloads, and resolutions to issues. Use the online service request system to create a service request. Chat with live agents to get answers to questions, or request an agent to connect you to a support team if an issue requires additional expertise.

Chapter 2: Getting started

Avaya Agent for Desktop overview

Avaya Agent for Desktop is a client application for contact centers. An agent can use Avaya Agent for Desktop for handling incoming and outgoing calls, changing work states, and managing other UI controls. However, only an administrator can manage the configurations and settings of the application.

Avaya Agent for Desktop supports multiple platforms and is designed to function in the following use cases:

- Virtual Desktop Infrastructure (VDI): Avaya Agent for Desktop provides a solution to deliver real-time media with VDI support in Citrix and VMware Horizon environments on HP and Dell based thin clients running on Windows and Linux based operating systems. An administrator can use Avaya Agent for Desktop for VDI to enable desktop virtualization that encompasses the hardware and software systems required to support the virtualized environment in a contact center.
- Standalone Contact Center Client: Avaya Agent for Desktop provides a full set of features for a contact center agent and can be used as a primary client application on Windows and Mac operating systems.

Avaya Agent for Desktop uses Avaya Aura[®] Communication Manager to store station configuration settings and manage agent profiles locally. You can also choose to use Avaya Control Manager for managing agent profiles.

Avaya Agent for Desktop usage scenarios

The following diagrams depict the various methods of using the Avaya Agent for Desktop application:

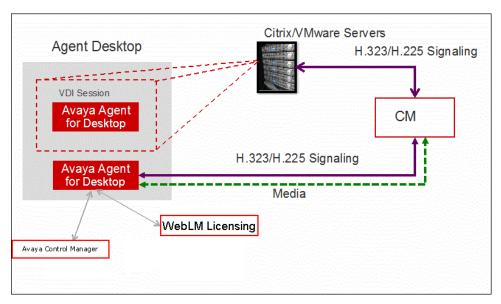

Figure 1: Avaya Agent for Desktop VDI solution with H.323

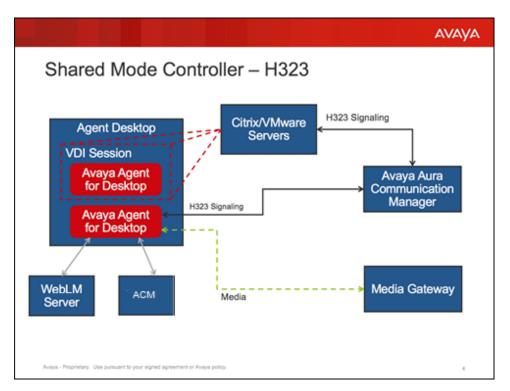

Figure 8: Avaya Agent for Desktop with shared control as controller with H.323

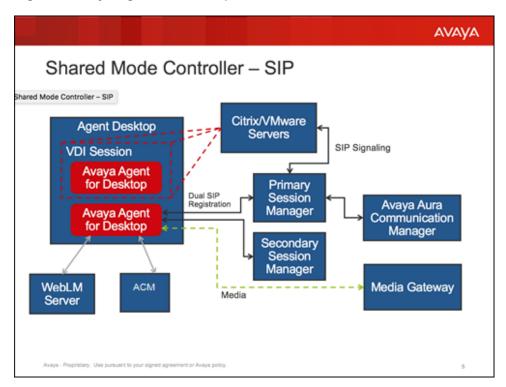

Figure 9: Avaya Agent for Desktop with shared control as controller with SIP

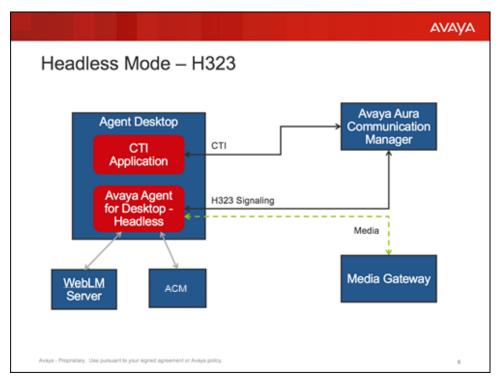

Figure 10: Avaya Agent for Desktop Headless Mode - H.323

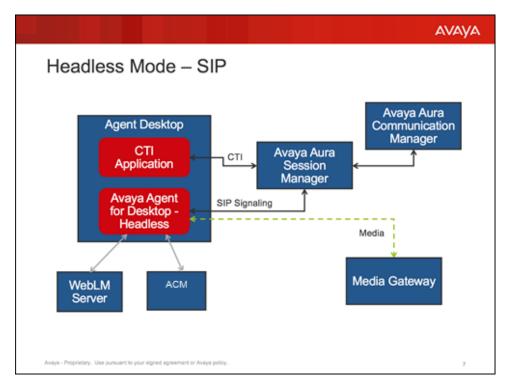

Figure 11: Avaya Agent for Desktop Headless Mode - SIP

Avaya Workspaces for Elite use case overview

You can use Avaya Agent for Desktop with Avaya Workspaces for Elite. In this case, you need to login only on station on the Avaya Agent for Desktop application, the call handling is handled through Avaya Workspaces for Elite through agent configured on Avaya Control Manager (ACM). The following diagram depicts how Avaya Agent for Desktop works with Avaya Workspaces for Elite:

Figure 12: Avaya Agent for Desktop with Avaya Workspaces for Elite

For more details on configuring Avaya Agent for Desktop on Avaya Workspaces for Elite, see the following sections of the *Deploying Avaya Workspaces for Elite* guide on the Avaya support portal:

- Topology
- Creating an Avaya Workspaces agent user to handle Elite Voice contacts
- Creating an Avaya Workspaces supervisor user

For more details on using Avaya Agent for Desktop on Avaya Workspaces for Elite, see the Operations section of the Using Avaya Workspaces for Elite guide on the Avaya support portal.

New features in 2.0.6.7 release

No new features added in this release. For details about sections updated in this guide, see *Change history*.

Section 508 Compliance support

Avaya Agent for Desktop graphical user interface is now largely compliant with the relevant Section 508 standards. We have tested most of these features using JAWS for Windows 10 64-bit (JAWS 2019.1907.42 Offline 64-bit August 2019).

For users who are blind and are using screen reader software, the most accurate compliance score is "Supports when Combined with Compatible Assistive Technology". Avaya Agent for Desktop is based upon a Qt framework. Support for Qt-based applications by assistive technologies is improving, but is currently incomplete. Accessibility support in Qt consists of a generic interface, implemented for a technology on each platform: MSAA on Windows, Mac OS X accessibility on the Mac, and Unix/X11 AT-SPI on Linux. Qt's accessibility interface closely follows the MSAA (Microsoft Active Accessibility) standard, which most clients support. Other technologies used by Qt provide similar functionality.

For low vision users, the most accurate compliance score is "Supports with Exceptions". Avaya Agent for Desktop uses a custom scheme of colors and fonts that cannot be changed by the user. This fixed set of colors and fonts may be problematic for some low vision users. The use of screen magnification software is supported, and most of these products have features that allow the user to override the colors of the application and enlarge the fonts. For keyboard-only usage, Avaya Agent for Desktop offers enhanced keyboard commands using Key Strokes configuration settings to control the application. The blind users can also access all controls of Avaya Agent for Desktop using the "Tab' key. Users must refer to the available documentation for Avaya Agent for Desktop 2.0.x for more details.

Note:

SSB BART Group did not audit Avaya Agent for Desktop with respect to the requirements in § 1194.21, § 1194.22, § 1194.23 and § 1194.24. The § 1194.21, § 1194.22, § 1194.23 and § 1194.24 audit of Avaya Agent for Desktop was performed by Avaya and the results are reported in a separate VPAT.

Prerequisites for using Avaya Agent for Desktop for standalone usage

For H.323 protocol

The following table displays the to do list of configurations for using the Avaya Agent for Desktop application with H.323.

No.	Task	Description	~
1	Avaya Aura [®] Communication Manager 7.1.x, 8.0.x, or 8.1.x	Avaya Aura® Communication Manager 7.1.x, 8.0.x, or 8.1.x server URL for CC elite is configured.	Mandatory

No.	Task	Description	~
2	Avaya Control Manager 8.1.0.1 or 9.0.1	Valid Avaya one-X [®] Agent profile is configured on Avaya Control Manager for H.323.	Optional
3	WebLM 8.0.x or 8.1.x	Valid license URL for Avaya WebLM server is configured.	Mandatory
4	LDAP credentials	If you are using LDAP, you must configure LDAP server and port details.	Optional

For SIP protocol

The following table displays the to do list of configurations for using the Avaya Agent for Desktop application with SIP.

No.	Task	Description	~
1	Avaya Aura [®] Communication Manager 7.1.x, 8.0.x, or 8.1.x	Avaya Aura® Communication Manager 7.1.x, 8.0.x, or 8.1.x server URL for CC elite is configured.	Mandatory
2	(Optional) Avaya Control Manager 8.1.0.1 or 9.0.1	Valid Avaya one-X [®] Agent profile is configured on Avaya Control Manager for SIP.	Optional
3	Avaya Aura [®] System Manager 7.1.x, 8.0.x, or 8.1.x	Valid Avaya Aura [®] System Manager 7.1.x, 8.0.x, or 8.1.x server URL is configured in Avaya Agent for Desktop.	Mandatory
4	Avaya Aura [®] Session Manager 7.1.x, 8.0.x, or 8.1.x	Valid Avaya Aura [®] Session Manager 7.1.x, 8.0.x, or 8.1.x server URL is configured in Avaya Agent for Desktop.	Mandatory
5	WebLM 8.0.x or 8.1.x	Valid license URL for Avaya WebLM server is configured.	Mandatory
6	(Optional) LDAP credentials	If you are using LDAP, you must configure LDAP server and port details.	Optional
7	Presence Services 8.0.x or 8.1.x	Presence Services in Avaya Agent for Desktop works in a SIP mode only.	Optional
		Note:	
		You must be sure that Avaya Agent for Desktop is using TLS connection. To activate this feature, your administrator must enable the Presence option in your Avaya Agent for Desktop configuration settings and configure SIP endpoint for Presence Services	

Prerequisites for using Avaya Agent for Desktop for VDI usage

For H.323 protocol

The following table displays the to do list of configurations for using the Avaya Agent for Desktop application with H.323.

No.	Task	Description	~
1	Avaya Aura [®] Communication Manager 7.1.x, 8.0.x, or 8.1.x	Avaya Aura® Communication Manager7.1.x, 8.0.x, or 8.1.x server URL for CC elite is configured.	Mandatory
2	Avaya Control Manager 8.1.0.1 or 9.0.1	Valid Avaya one-X [®] Agent profile is configured on Avaya Control Manager for H.323.	Optional
3	WebLM 8.0.x or 8.1.x	Valid license URL for Avaya WebLM server is configured.	Mandatory
4	LDAP credentials	If you are using LDAP, you must configure LDAP server and port details.	Optional
5	Share control mode	Use the Hide interface option to make and receive calls using the Avaya one-X® Agent interface, while being logged in to Avaya Agent for Desktop with the same extension.	Optional

For SIP protocol

The following table displays the to do list of configurations for using the Avaya Agent for Desktop application with SIP.

No.	Task	Description	~
1	Avaya Aura [®] Communication Manager 7.1.x, 8.0.x, or 8.1.x	Avaya Aura [®] Communication Manager 7.1.x, 8.0.x, or 8.1.x server URL for CC elite is configured.	Mandatory
2	(Optional) Avaya Control Manager 8.1.0.1 or 9.0.1	Valid Avaya one-X [®] Agent profile is configured on Avaya Control Manager for SIP.	Optional
3	Avaya Aura [®] System Manager 7.1.x, 8.0.x, or 8.1.x	Valid Avaya Aura [®] System Manager 6.3 or 7.0 server URL is configured in Avaya Agent for Desktop.	Mandatory
4	Avaya Aura [®] Session Manager 7.1.x, 8.0.x, or 8.1.x	Valid Avaya Aura [®] Session Manager 6.3 or 7.0 server URL is configured in Avaya Agent for Desktop.	Mandatory
5	WebLM 8.0.x or 8.1.x	Valid license URL for Avaya WebLM server is configured.	Mandatory

No.	Task	Description	•
6	(Optional) LDAP credentials	If you are using LDAP, you must configure LDAP server and port details.	Optional
7	Share control mode	Use the Hide interface option to make and receive calls using the Avaya one-X [®] Agent interface, while being logged in to Avaya Agent for Desktop with the same extension.	Optional
8	VMware	VMware integration is required for Avaya Agent for Desktop for VDI use case.	Mandatory
9	Presence Services 8.0.x or 8.1.x	Presence Services in Avaya Agent for Desktop works in a SIP mode only.	Optional
		Note:	
		You must be sure that Avaya Agent for Desktop is using TLS connection. To activate this feature, your administrator must enable the Presence option in your Avaya Agent for Desktop configuration settings and configure SIP endpoint for Presence Services	

Prerequisites for using Avaya Agent for Desktop for remote agent usage

For H.323 protocol

The following table displays the to do list of configurations for using the Avaya Agent for Desktop application with H.323.

No.	Task	Description	~
1	Avaya Aura [®] Communication Manager 7.1.x, 8.0.x, or 8.1.x	Avaya Aura® Communication Manager 7.1.x, 8.0.x, or 8.1.x server URL for CC elite is configured.	Mandatory
2	Avaya Control Manager 8.1.0.1 or 9.0.1	Valid Avaya one-X [®] Agent profile is configured on Avaya Control Manager for H.323.	Optional
3	WebLM 8.0.x or 8.1.x	Valid license URL for Avaya WebLM server is configured.	Mandatory
4	LDAP credentials	If you are using LDAP, you must configure LDAP server and port details.	Optional

No.	Task	Description	~
5	Citrix Presentation Server	An agent can connect to Avaya Agent for Desktop remotely, from home, airport Internet kiosks, softphones, and other devices outside the corporate network. However, an agent can use Citrix Presentation Server setup only in SIP based connection.	Optional

For SIP protocol

The following table displays the to do list of configurations for using the Avaya Agent for Desktop application with SIP.

No.	Task	Description	~
1	Avaya Aura® Communication Manager 7.1.x, 8.0.x, or 8.1.x	Avaya Aura® Communication Manager 7.1.x, 8.0.x, or 8.1.x server URL for CC elite is configured.	Mandatory
2	Avaya Aura [®] System Manager 7.1.x, 8.0.x, or 8.1.x	Valid Avaya Aura [®] System Manager 7.1.x, 8.0.x, or 8.1.x server URL is configured in Avaya Agent for Desktop.	Mandatory
3	Avaya Aura [®] Session Manager 7.1.x, 8.0.x, or 8.1.x	Valid Avaya Aura® Session Manager 7.1.x, 8.0.x, or 8.1.x server URL is configured in Avaya Agent for Desktop.	Mandatory
4	WebLM 8.0.x or 8.1.x	Valid license URL for Avaya WebLM server is configured.	Mandatory
5	(Optional) LDAP credentials	If you are using LDAP, you must configure LDAP server and port details.	Optional
6	Avaya Session Border Controller for Enterprise (SBC)	An agent can connect to Avaya Agent for Desktop remotely, from home, airport Internet kiosks, softphones, and other devices outside the corporate network. However, an agent can use SBC setup only in SIP based connection.	Optional
7	Presence Services 8.0.x or 8.1.x	Presence Services in Avaya Agent for Desktop works in a SIP mode only.	Optional
		Note:	
		You must be sure that Avaya Agent for Desktop is using TLS connection. To activate this feature, your administrator must enable the Presence option in your Avaya Agent for Desktop configuration settings and configure SIP endpoint for Presence Services	

Logging in to Avaya Agent for Desktop

About this task

The way you log in to Avaya Agent for Desktop depends on your system configuration:

- You can log in using your agent extension and password. You may also need to provide the extension and password for the station that you are logging in.
- If you configure to use local configuration and the registration is made through Avaya Aura[®]
 Communication Manager, enter the credentials to register the station and the agent. The
 Avaya Control Manager (ACM) login options are hidden in this case.
- If the registration is made through ACM, then you have the following options:
 - If you use Basic ACM Login, then provide credentials in the Avaya Control Manager section, such as ACM Account and Password, along with the Station and Agent sections.
 - If you use **Single Sign-On ACM Login**, then you have to provide credentials in the **Station** and **Agent** sections. You do not have to provide credentials in the **Avaya Control Manager** section.
 - If you use ACM Unified Login, then you must provide credentials in the Avaya Control Manager section, such as ACM Account and Password, along with the Station and Agent sections.
 - When multiple templates are assigned to a user using the ACM Web portal, the user can select different ACM template using the ACM Profile field while logging in on Avaya Agent for Desktop. This feature is available for all ACM login types except Use Local Configuration login type on Avaya Agent for Desktop.
 - When a user selects an **ACM Profile** and clicks the **Select Profile** button on Avaya Agent for Desktop, the configurations for selected ACM profile is downloaded, and ACM login is complete.
 - A user must select an ACM profile within two minutes to select a template for the ACM login. If the user does not select ACM template during this time interval, ACM login is aborted and error message is displayed to the user.
 - If for a selected user only one template is configured on the ACM Web portal, ACM login does not require any actions from the user to select a profile. In this case, template name is shown in the ACM Profile field, but ACM Profile field and Select Profile buttons are not available for a user for selection.
 - In the Basic ACM Login and Unified ACM Login types, users have the option to Signout of ACM. ACM Signout functionality provides the ability to change ACM login credentials or profile name and re-login on Avaya Agent for Desktop. When ACM logout is complete, all settings, which is downloaded through ACM, is reset to default, and input fields for ACM login credentials are available for the user.
 - There is only one difference between Basic ACM Login and Unified ACM Login types, that is, if Unified ACM Login type is selected, user cannot change station and agent login credentials manually. When Unified ACM Login type is used, input fields for Station ID, Agent ID, login mode, and passwords are disabled for the user.

- If the AADS login type is used, then you have the following options:
 - For a basic AADS login type, provide your email address or configuration URL as configured on the AADS server. If email address is provided, select the AADS server location first before moving to the login screen. On the next step, you need to provide AADS login and password details on Avaya Agent for Desktop login screen.
 - For a SAML AADS login type, provide your email address or configuration URL as configured on the AADS server. If email address is provided, you need to select the AADS server location first before moving to the login screen. For SAML AADS login type, you will be redirected to the third-party login screen. If login is successful, the user is returned to the Avaya Agent for Desktop main login window, otherwise, user is returned to the step 1 of the login screen for this option.
- If the **Automatically Sign In** configuration setting is enabled for any sections such as Avaya Control Manager, Station, or Agent, the system automatically logs in the user for the respective options.
- If the **Save Password** configuration setting is enabled for any sections such as Avaya Control Manager, Station, or Agent, the system automatically saves the password for the respective options.

Before you begin

You must contact your system administrator or supervisor and request for login credentials.

Procedure

- 1. Start Avaya Agent for Desktop.
- 2. Perform any one of the following actions:
 - If you are configured to use Avaya Control Manager profiles, such as Basic ACM Login
 and ACM Unified Login, then type the ACM Account and Password credentials along
 with the Station and Agent section credentials. Additionally, if for a selected account,
 multiple templates are configured, then select ACM Profile and click Select Profile.
 - If you are configured to use local configuration or **Single Sign-On ACM Login** options, then type the **Station** and **Agent** credentials. Additionally, if for a selected account, multiple templates are configured, then select **ACM Profile** and click **Select Profile**.
 - Note:

If **Use Local Configuration** is selected for **ACM Login Type** in the Settings window, then **Avaya Control Manager** login section is not displayed on the Login window.

Note:

The Avaya Agent for Desktop administrators can change the profile settings using **Settings** > **Avaya Agent Settings** window > **Server** menu.

 For AADS login type, provide Your email or configuration URL on step 1 and click Next. If the email address is provided, select the AADS server location on step 2 and click Next. On step 3, for a basic AADS login type, provide AADS Login and Password. For SAML AADS login type, you are redirected to the third-party login screen. On successful login on third-party login screen, you are redirected to Avaya Agent for Desktop main login window to provide other details and sign in.

- 3. To change the audio device, in the station sections, select any of the following options:
 - **My Computer**: Use this option to use Avaya Agent for Desktop with general capabilities on your computer.
 - **Desk Phone**: Use this mode when you are at the office. In this mode, you can log into the server and control your Avaya desk phone from Avaya Agent for Desktop. You can make and handle calls from Avaya Agent for Desktop user interface and your Avaya desk phone. You can use your Avaya telephone to speak and listen.
 - Other Phone: Use this mode when you are telecommuting, that is when you are working from home or other off-site locations. You can use this mode to get features of your telephone system from a location other than your office. You can place and handle calls through the Avaya Agent for Desktop user interface, and you can use a separate telephone line at your remote location to speak and listen. You need to define the Other Phone Number once you select this option.
- 4. To automatically log in to the given sections, select the **Automatic Sign In** check box of the respective sections.
- 5. To save passwords provided in AADS, ACM, Station, or Agent sections, select the **Save** password check box of the respective sections.

Note:

In case of AADS authentication, the password is saved on AADS reboot, logout, or login actions only if the **Password Storage Mode** is set to **Non-secure storage only** or **Security Storage if available** is set to **Not available**. Otherwise, the password is lost even if the **Save password** check box is selected.

6. To sign in to each option separately, click **Sign In** in the respective sections. To sign-in all options together, click **Sign In All**.

Note:

If the **Automatic Sign In** check box for a section is selected, you do not have to click on the **Sign-In** button for that section manually.

If the login process is successful, the system displays a signed in text in green next to the respective login sections.

Agent states

The agent status icons are on the left corner of the top bar with the corresponding agent status. You can change the agent status either from the top bar or by right-clicking on the Avaya Agent for Desktop tray icon. The top bar displays the name of the agent or the extension number with the corresponding system status.

The following table describes the agent status icons that appear on the top bar:

Icon	Agent state	Description
Server Unreachable	Offline	This state is visible when there is a network connection issue. Once the connection issue is resolved, the agent is automatically logged in again.
	Offline	This state is visible if the agent is not logged in or have logged out. of the Avaya Agent for Desktop system. To register the user or to login to the system, click the Show Login Dialog option and provide the credentials in the required fields.
•	Ready (not on a call)	The system displays this state when the agent logs in to the Avaya Agent for Desktop application. The Ready state indicates that the agent is ready to receive calls from Communication Manager. In addition, Communication Manager delivers ACD calls depending on the configuration on Communication Manager for Multiple Call Handling (MCH).Communication Manager delivers an ACD call if the ACD call is in progress when you set MCH to Yes in Communication Manager.
Ready (34:42)	Ready (on a call)	The system displays this icon when the agent state is ready, but currently on an active call.
0	ACW	The system displays this icon when either the agent or Communication Manager changes the status to After Call Work (ACW).
Blinking icon between after call work icon and on-a-call icon	ACW Pending	The system displays this icon when the agent attempts to change the status to ACW from the Agent State drop-down arrow during the call. The system creates a pending ACW and changes the agent states to ACW only after the agent completes the call.
©	Aux	The system displays this icon when the agent changes the status to Aux from the Agent State drop-down arrow. The Aux message indicates that the agent is not ready for ACD calls. Agents can make or receive calls on the station while in the Aux state.
Blinking icon between aux icon and on-a-call icon	Aux Pending	The system displays this icon when the agent attempts to change the status to Aux from the Agent State drop-down arrow during a call. The system creates a pending Auxiliary and changes the agent states to Aux only after the agent completes the call.

Reason codes

Using Avaya Agent for Desktop, you can change the agent availability status and specify the appropriate reason code. Avaya Agent for Desktop supports the following three types of reason codes:

- Auxiliary Reason Codes
- Logout Reason Codes
- Call Work Codes

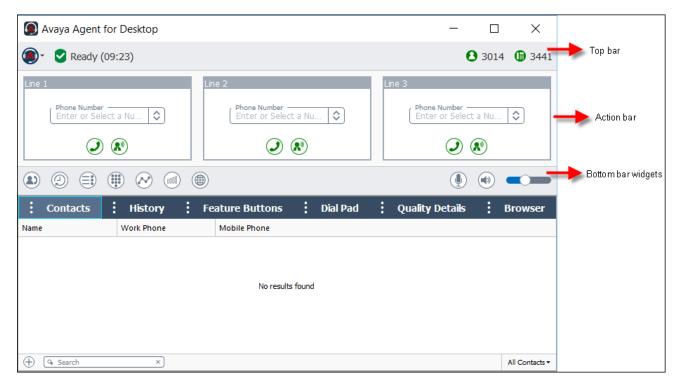

The reason code represents the reason for not being at the workstation, call work related actions during an active call, or for not accepting the ACD call. The system displays a lock icon next to the reason codes received from ACM.

Familiarizing with the Avaya Agent user interface

Avaya Agent user interface

Avaya Agent for Desktop occupies minimum space on the computer desktop. The desktop application provides a common look-and-feel and a Graphic User Interface (GUI) to match the work that an agent performs. With the main window, you can gain access to all the features of Avaya Agent for Desktop.

The following figure shows the components of the main window:

Top bar items:

The top bar of Avaya Agent for Desktop contains application controls, such as main menu options, agent state, agent and station details.

Icon	Name	Description
Auxiliary: 2 - On hold (00:41)	Agent state	Displays the agent state with reason code name and the state timer.
		The state timer indicates the total time that you spend in the current state.
② 3014 ③ 3441	Station: Agent extension numbers	Displays the station number and agent extension that you use for logging in to Avaya Agent for Desktop.
Avaya Agent for Desktop	Application name	The name of the application.
		This field displays Avaya Agent for Desktop at all times.
	Maximize	Expands the Avaya Agent for Desktop window to the top of the computer desktop.

Icon	Name	Description
×	Close	Hides the Avaya Agent for Desktop user interface.
		To display the Avaya Agent for Desktop user interface, you can:
		double-click the Avaya Agent for Desktop system tray icon.
		right-click the Avaya Agent for Desktop system tray icon and click Hide Interface .

Action bar items:

The action bar contains the controls to handle the calls and to make call transfers and conferences. The action bar also displays the active calls. The maximum number of active calls that Avaya Agent for Desktop can display is 3.

Icon	Name	Description
Phone Number Enter or Select a Nu	Call text box	The text box where you can type the destination number to make a new call, a transfer or a conference call.
		You can call a contact in the list by clicking the scroll icon located next to the call text box and selecting the contact in the list.

Icon	Name	Description
Line 1	Active call cell	As you make and receive calls, the action bar displays a cell for every active call.
Dmitry_skill_group		The cell contains the following items:
		Call control button: Use for dropping the call or for creating a transfer or a conference.
		Contact name or call type: If the cell displays a conference call, the system displays Conference and the number of participants.
		Call timer: Displays the total time spent on the call. When you hold the call, the timer displays the total hold time.
		Drop button
		Hold button
		Initiate Service Observing
		• Enable DTMF button: This is a new button added to send DTMF from a keyboard. When a user clicks this button, the text label containing telephone number hides and a new DTMF input field appears. The user can start typing DTMF digits in the field without any additional mouse clicks. You can type only digits (0–9), pound sign (#), and asterick (*) in this field. When this field is enabled, the DialPad window is also enabled as an alternate input option.
		After input is complete, the user can close the line field by pressing the Enter or the Escape key or just by clicking the DTMF button again. The line edit field will hide and the telephone number label is shown again.

Icon	Name	Description
②	Answer button	The icon that the system displays in the call cell when a call arrives.
	Hold button	The icon that the system displays for putting a call on hold.
•	Resume button	The icon that the system displays for resuming a held call.
O	Drop button	The icon that the system displays for dropping a call or a conference.

Bottom bar widgets:

The bottom bar widgets contains the following controls:

Icon	Name	Description
2	Contacts	Displays or hides the contact list.
②	History	Displays or hides the work log history.
	Feature Buttons	Displays the list of feature buttons configured
	DialPad	Displays the dial pad.
⊘	Stats Console	Displays the Stats Console information window.
all	Quality Details	Displays the network quality indicator for the current call. The call quality level is defined based on the value of the parameters such as, packet loss, jitter buffer, and other given parameters. The quality level is scaled from 1 to 5, and defined as 1–Poor, 2–Average, 3–Medium, 4–Good, 5–Excellent.
	Browser	Displays the URL in the internal browser.
•	Volume control	Adjusts the volume of the audio output device.
		Click the button next to the volume slider to mute or unmute the audio output device.
	Mute microphone (audio)	Mutes or unmutes the microphone.

Avaya Agent for Desktop tray icon and action bar items

This section describes the Avaya Agent for Desktop features that you can gain access to by using the system tray icon or agent state main menu in the top bar.

Name	Description
Agent states	The list of agent states options available are:
	Ready: Move the agent to ready state. In this state, the agent is ready to take calls or already on an active call.
	Auxiliary: Move the agent to not ready state. In this state, the agent is not ready to take calls. You can choose a reason code if it is available for this state.
	Agent Log Out: Log out the agent. You can choose a reason code if it is available for this state.
Show Login Dialog	This option is now always visible whether the agent/ station is logged in or not on the Avaya Agent for Desktop application. To register the agent/station or to login to the system, click this option and provide the agent user name and password.
Station Logout	Log out of the station.
Collapsed Mode	View theAvaya Agent for Desktop user interface in a compact view.
Always on Top	See the Avaya Agent for Desktop user interface on top of other windows.
Hide Interface	Hide the Avaya Agent for Desktop user interface.
	This feature is useful during shared control mode with Avaya one-X [®] Agent or Avaya Agent for Desktop.
Reset Window Position	Realign the Avaya Agent for Desktopwindow to the default position.

Name	Description
Workspace	View application UI based on various available workspace options, such as:
	Load Workspace: Basic, Extended, and Shared Control. Select a customized workspace if it is already defined.
	Save Workspace: Save the current workspace UI as a new custom workspace or replace an existing custom workspace.
	Manage Workspace: Rename or remove the current list of custom workspace.
	Lock Windows Position: Lock the current workspace UI position on the screen.
Logs	Click Logs > Save As to save the call logs in a .zip format on your desktop.
	Note:
	This option is disabled for agents. Only administrators can save or retrieve logs now in Avaya Agent for Desktop.
Settings	Open the Avaya Agent for Desktop settings window.
About	Display version information about the Avaya Agent for Desktop application.
Quit	Close the Avaya Agent for Desktop application.

Setting the language for Avaya Agent for Desktop

Before you begin

In the system tray, right-click the Avaya Agent for Desktop icon and select **Settings**. The system displays the Avaya Agent for Desktop Settings window.

About this task

The Avaya Agent for Desktop user interface is designed for being used in multiple languages.

This procedure describes how to change the language of the Avaya Agent for Desktop user interface.

Procedure

- 1. In the Avaya Agent for Desktop Configuration window, click the **Advanced** tab.
- 2. In the **Language** field, click one of the available languages.
- 3. Click Save.

Adding a greeting message

Before you begin

In the system tray, right-click the Avaya Agent for Desktop icon and select **Settings**. The system displays the Avaya Agent for Desktop Settings window.

About this task

You can configure the system to play a greeting message to the client when incoming calls are connected.

Procedure

- 1. In the Avaya Agent for Desktop Settings window, select the **Greetings** tab.
- Click the Add icon in the left pane.
- 3. In the **Rule Name** field, type the name of the greeting message.
- 4. In he **VDN Name Pattern** field and type the name of the VDN associated to the greeting message.

When a call with an agent starts, the VDN name you define is displayed on the top bar. Also, the VDN name field can display only 16 characters (15 visible and 1 for string termination). Thus, if the VDN name is too long, then you must add a '*' to abbreviate. The key point is that Avaya Agent will match the VDN name to play a greeting. For example, Queue to Virtual Agents must be added as Queue to*.

- 5. In the **Auto Play only if** field, click any one of the following options:
 - Do not auto play
 - · When agent is in Ready Mode
 - · When agent is logged in
 - For all incoming calls
- 6. (Optional) Click the File Name field, to modify the file name details.
- 7. (Optional) In the File Path field, click to select the required audio file.
- 8. In the **Recording** field, click **Record** to record a new audio message. Click **Stop** to stop recording.

The **Duration** field displays the duration of the recorded audio file and cannot be modified.

- 9. (Optional) Click the **Play** icon to listen to the recording.
- 10. To remove an audio file from the **Greetings List**, select an entry from the list and click the **Delete** icon.

- 11. Click Yes to confirm deletion.
- 12. Click **Save** to save the greeting message settings.

Greetings tab field descriptions

In addition to recording an audio file, Avaya Agent for Desktop now provides option to upload multiple audio files for a greeting message. You can chose to activate a desired audio file from the list of audio files uploaded for a greeting message. You can also configure settings to auto-play the audio files based on the Avaya Agent for Desktop status. You can use the following descriptions from the **Greetings** tab to manage greetings.

Field	Description
Rule Name	The field to define the name of the new audio greeting rule.
VDN Name Pattern	The field to define the name of the new audio greeting rule in a regular expression format. For example – Special symbol *. VDN "Avaya*_VDN" will be triggered for "AvayaWeather_VDN", "Avaya123_VDN" and other VDN Names satisfy this rule. Special symbol ?. VDN "Avaya?VDN" will be trigerred for "Avaya1VDN", "Avaya2VDN" and similar.
Auto Play only if	The field to auto play the active audio file of a greeting message based on the status of the Avaya Agent for Desktop application. The following are the available options:
	Do not auto play: The greeting message is not triggered and rule is disabled.
	For all incoming calls: The greeting message is played for all incoming calls. The VDN expression is ignored.
	When agent is logged in: The greeting message is played when agent is logged in irrespective of the agent state. The VDN expression is ignored.
	When agent is in Ready Mode: The greeting message is played only when agent is in Ready state. Greeting message is played for all incoming calls if VDN is empty. If VDN is not empty, greetings which satisfy the VDN rule is played.
File name	The field to display and modify the file name of the active audio file.
File Path	The field to select an audio file.
Duration	This field displays the duration of the recorded audio greeting.
Recording	The field to record and play an audio file.

Chapter 3: Using Avaya Agent

Managing the contact list

Use the Contact widget icon for viewing, adding, removing and editing contacts. You can also use the contacts list to make calls, conferences, or call transfers.

The Contact List window displays the contacts details in a table and has the following filtering capabilities:

- Sorting the contacts in ascending or descending order, based on the contact details.
- Mark a particular number of a contact as Favorite or Speed Dial.
- View all contacts or view only those contacts marked as Favorites or as Speed Dial.
- Searching for a contact by name or by phone number.

Viewing contacts

Procedure

1. In the bottom bar widgets, click the **Contacts** icon.

The system displays the Contacts widget window.

Note:

You can also view the LDAP contacts in the Contact window.

2. To sort the contacts in ascending or descending order, click the table header that corresponds to the contact detail to use for sorting.

For example, to sort the contacts by the name, in ascending order, click the Name header once. To sort the contacts in descending order, click the **Name** header a second time.

- 3. To select the type of contacts to display, select one of the following menu options at the bottom left of the screen:
 - All Contacts: To display all the contacts in the contact list
 - Favorites: To display the contacts marked as favorites
 - Speed Dial: To display the contacts marked for speed dial
- 4. To add a new contact, click the Add icon at the bottom left of the screen and provide the required details, and then click **Save**.
- 5. To search for a contact, type the name or the phone number in the **Search** field at the bottom left of the screen.
- 6. You can also click the three dot icon in the last column next to a contact to edit or delete a contact.
- 7. You can also click the phone number link in the **Mobile Phone** or **Work Phone** column to initiate a call with a contact. Additionally, you can also right-click on the number link to initiate a call, transfer a call, or add the number to a conference call.

Handling calls

About this task

Avaya Agent for Desktop works as a soft phone that you can use to handle calls in the same manner as a desk phone.

This section contains the procedures to handle calls using Avaya Agent for Desktop for different settings. This section includes information about:

· Answering a call

- · Putting a call on hold
- · Ending a call
- Making a call

Every active call has a cell in the action bar of the Avaya Agent for Desktop user interface. The cell contains the buttons to control the call.

Procedure

- 1. To answer an incoming call, click the **Answer** button in the ringing call cell.
- 2. To put an active call on hold, click the **Hold** button in the active call cell.

The **Hold** button changes to **Resume** when the call is on hold. Click the **Resume** button to resume the call.

3. To end a call, click the **Drop** button in the active call cell.

Using headset buttons for handling calls

Answer a call

An agent can answer an incoming call in two ways:

- · Press call button on main window
- Press physical call button on the headset. This feature will work if the headset button is configured for answering an incoming call.

When the agent presses the call button on headset, call is answered and the agent state is changes to active state.

Hold/unhold a call

An agent can hold/unhold calls in two ways:

- · Press hold/unhold button on main window
- Press physical call button on the headset. This feature will work if the headset button is configured for holding/unholding calls.

When an agent presses the call button on headset, the call will hold if it is active or unhold if it was on hold.

Note:

Some Jabra devices have an additional hold button. This button works in the same way and does not need additional configuration.

Drop a call

An agent can drop an active call in two ways:

- Press call button on main window
- Press physical call button on the headset. This feature will work if the headset button is configured for dropping an active call.

When the agent presses the physical call button on the headset, call will be dropped.

Mute/unmute a call

An agent can mute/unmute an active call in two ways:

- Press call button on main window
- Press physical call button on the headset. This feature will work if the headset button is configured for muting/unmuting an active call.

When the agent presses the physical mute/unmute button on the headset or presses the mute/ unmute button on the main window, Avaya Agent for Desktop audio input is stopped/retrieved and the microphone icon on the main window and the headset is changed to mute/unmute icon respectively.

Using the dial pad

About this task

The dial pad is an alternative to using the keyboard for entering phone numbers in the text input field

Procedure

- 1. In the bottom bar widget, click the **Dial Pad** icon.
- 2. Click the dial pad buttons to form the number in the text input box.
- 3. (Optional) Click **Redial** to dial the last called number.
- 4. Click Dial.

Next steps

To close the Dial Pad window, click the dot icon located on left of the Dial Pad widget window and click **Close Widget**.

Using the feature buttons

About this task

The feature button allows you to change the agent state, change the ready mode, release a call., initiate a service observe call, and other actions.

Procedure

In the bottom bar widget, click the **Feature Buttons** icon and click to use any of the following features:

- Manual In: to accept ACD calls when you release a live call
- Auto In: to change the agent state to Ready after you release the call
- AfterCall: to change the agent state to ACW
- AuxWork: to change the agent state to Aux
- Service Observe: to initiate a supervisor service call.
- · Release: to release an active call
- last-numb: to dial the last called number
- **normal**: to place the station display into normal call identification mode.

Next steps

To close the Dial Pad window, click the dot icon located on left of the Dial Pad widget window and click **Close Widget**.

Changing the agent state

Before you begin

When you log in to Avaya Agent for Desktop, the system changes the agent state from **Offline** to the default **Auxiliary** state. You must then change the agent state to **Ready** mode to start receiving ACD calls.

About this task

Following are the steps for changing an agent state from **Ready** mode to the other available states:

Procedure

- 1. In the top bar, click the **Agent State** drop-down arrow.
- 2. In the menu, click one of the following options and select the applicable reason code:
 - After Call Work: To change the agent state for an after call work.
 - Auxiliary: To change the agent state for an Aux-Work.

• Log Out: To change the status to the logout mode.

Managing the call history

Avaya Agent for Desktop keeps a history of the calls you make and receive.

The call history window displays the following information:

- **Type**: Displays whether the call was incoming, outgoing, or cancelled by the caller.
- Name: Displays the name of the contact.
- Number: Displays the phone number of the contact.
- Time & Date: Displays the date and time of the call.
- **Duration**: Displays the duration of the call.
- Work Codes: Displays the reason selected for taking any call work related action during an active ACD call.

You can sort the entries in the Calls History window by the following criteria:

- Call information: type, name, phone, date-time, duration
- The time when the call occurred: the current day, the previous day, the current week, the current month
- Searching for a contact by name or by phone number

Message waiting indicator overview

The Avaya Agent for Desktop system displays the Message Waiting Indicator (MWI) as a button in the top bar of the main window. The When you click the MWI button, the system dials the voice mailbox number configured for the host agent. Avaya Agent for Desktopsupports group MWI feature as well, where the aut-msg-wt light turns on when the group mailbox receives a message. Also, when a new voice mail arrives, the message waiting indicator turns red. Using MWI, you can perform the following actions:

- Set up the voice mailbox.
- · Listen to a voice mail.
- Send a voice mail.
- · Delete a voice mail.

To perform these actions, you must click the message waiting indicator button and follow the IVR instructions.

When you request to listen to the voice mails, the Avaya Agent for Desktop system plays the latest mail first.

Using shared control mode between Avaya Agent for Desktop and Avaya one-X Agent

This section describes the procedure to enable shared control mode while using Avaya Agent for Desktop and Avaya one-X[®] Agent.

About this task

Shared control mode is a feature for using Avaya Agent for Desktop as a desk phone for Avaya one-X[®] Agent. With shared control mode, you can make and receive calls using the Avaya one-X[®] Agent interface, while being logged in to Avaya Agent for Desktop with the same extension.

Note:

Shared control mode requires a specific system configuration. Contact the system administrator for support. To test the shared control with Avaya Agent for Desktop, Avaya one- X^{\otimes} Agent must be on the separate machine.

The following procedure describes the steps you must take to enable shared control mode in Avaya one-X[®] Agent and to hide the user interface of Avaya Agent for Desktop.

Procedure

- 1. Log in to Avaya Agent for Desktop.
- 2. Start Avaya one-X[®] Agent and click **System Options** > **System Settings**.

- 3. Navigate to the **Login** panel and select the **Telephony** tab.
- 4. In the **Extension** and **Password** fields, set the extension and the password used to log in to Avaya Agent for Desktop.
- 5. In the Place and receive calls using field, select Desk Phone.
- 6. Click OK.
- 7. Right-click the Avaya Agent for Desktop tray icon and click **Hide Interface**.

The Avaya Agent for Desktop user interface now becomes invisible and you can handle calls using only the Avaya one-X[®] Agent user interface.

Using Avaya Agent for Desktop in shared control mode with Avaya Agent for Desktop

About this task

Shared control mode is a feature for using Avaya Agent for Desktop as a desk phone for another instance of Avaya Agent for Desktopas well. With shared control mode, you can make and receive calls using the Avaya Agent for Desktop interface, while being logged in to another Avaya Agent for Desktop instance with the same extension.

Procedure

- 1. Log in to Avaya Agent for Desktop in My Computer mode.
- 2. Start another instance of Avaya Agent for Desktop and navigate to Login panel.
- 3. In the **Extension** and **Password** fields, set the extension and the password used to log in to Avaya Agent for Desktop.
- 4. Navigate to **Login** panel and select mode as Desk Phone.
- 5. Click Login.
- 6. Right-click the Avaya Agent for Desktop which is in My Computer mode on the tray icon and click **Hide Interface**.

The Avaya Agent for Desktop user interface now becomes invisible and you can handle calls using only the another instance of Avaya Agent for Desktopinterface which is in Desk Phone mode.

Avaya Agent for Desktop supervisor feature overview

Avaya Agent for Desktop allows a supervisor to observe an agent's performance on any particular call, silently and unobserved. Avaya Agent for Desktop leverages only Communication Manager native capabilities for supervisor feature but in a user-friendly UI workflow. Here, a supervisor can

listen-in or barge-in to the agent-customer interaction using this function. If the administrator has enabled this service, the observing icon appears as a work item on the supervisor's Avaya Agent for Desktop user interface. Additionally, Avaya Agent for Desktop Coaching feature now allows agents to listen to a supervisor and restrict customers from hearing the same conversation. The supervisor can activate this feature using the following options:

- 1. Contact numbers in the following sections:
 - a. Call history
 - b. Contact list
 - c. Main screen input box
- 2. Right-click on the target agent row and select anyone of the following options:
 - For H.323
 - Note:

In this case, the functionality can be started by Station or Agent.

- a. Observe: listen-only: Supervisor could only hear the talk between the agent and the customer.
- b. Observe: listen/talk: Supervisor could also talk and the agent and the customer will hear the supervisor.
- For SIP
- Note:

In this case, the functionality can be started by Agent only.

- a. Observe: listen-only: Supervisor could only hear the talk between the agent and the customer.
- b. Observe: listen/talk: Supervisor could also talk and the agent and the customer will hear the supervisor.
- c. Observe: Coaching: Only agent could hear the supervisor but the customer is restricted to hear the conversation.

Note:

In second case, only the Coaching button is allowed. Initially when coaching is activated, the session is started as listen-only and supervisor is muted. The supervisor could change the mode to listen-talk in a call appearance list after clicking on the corresponding button.

Avaya Agent Service Observing user Experience

- 1. You need to configure your extention with **sip-sobsrv** feature on System Manager.
- 2. You need to configure COR (class of restriction) which you would like to observe.
- 3. Login into the extention and make sure you have **sip-sobsrv** feature in "feature buttons" pad.
- 4. Also an agent should be logged in and be in **AUX** mode. You get notification if you try to use coaching feature in **Ready** mode.
- 5. You can also start Service Observing from Call Appearance

Using the supervisor feature on page 50

Using the supervisor feature

About this task

SO session:

This appears when observed agent/station/VDN has an active call:

- SO session is marked with a binocular icon on the left side of the call panel.
- The Change mode button is present (listen-only/listen-talk). Default is listen-only.
- For coaching, separate button is present.
- This session is ended when you click the Drop button or the observed call is dropped on another side.

SO pending session

This is UI session which show the user that service observing feature is activated but waiting for session on agent/station/VDN side. You can drop SO pending session to deactivate SO feature. SO pending session disappears when SO session is established. But it returns back when SO session is ended, as Avaya Agent for Desktop is still subscribed for SO and waiting for the next call session. To deactivate SO, you need to drop the SO pending session.

Separate button on call appearance:

If coaching is available, then a separate button will appear on call appearance. The supervisor should activate the coaching mode by pressing on this button.

Call appearance with active coaching mode:

The Listen-only/Listen-talk buttons are not available in a coaching mode. To deactivate coaching mode, the supervisor must press on the corresponding button. After coaching mode deactivation, the next SO mode will be the previous one (that is one before Coaching mode).

The supervisor feature can be activated in the following three ways.

Procedure

1. In the main window, type an Agent/Station/VDN Id and click **Observe**.

Note:

If you already have initiated SO session, you cannot initiate a new one and Observe button will not be available. Also, the user cannot initiate a new call while having SO session.

- 2. Open the contact list and chose the target of observing. Then, click the call menu and click
- 3. Activate the **sip-sobsrv** feature button. You need to point the feature to two attributes here; SoEntity for the agent id/station/VDN for which you want to observe the call; and SoMode where you need to select the type as listen-only.

Avaya Agent for Desktop supervisor feature overview on page 48

Avaya Agent for Desktop Presence feature overview

About Presence feature

Avaya Agent for Desktop now supports Avaya Presence feature. Using Presence feature, an agent can publish their presence details, such as availability, on-phone state, notes, and also observe presence of another agent. Avaya Agent for Desktop enhances the standard Avaya Presence states by correlating them to the standard agent states, such as AUX, ACW, Ready, etc., with the additional presence note. Presence works in a shared control mode only if Avaya Agent for Desktop is used on both side (Controlled and controlling). This feature works only if you are using SIP protocol.

Note:

Presence is unavailable if you connect Avaya Agent for Desktop using H.323.

The presence feature displays both agent's presence and presence of contacts in the agent's contact list.

About Self Presence

- Whenever user logs in on a station, Presence shows offline state.
- Whenever user logs in on agent extension, Avaya Agent for Desktop Presence shows away state.
- Whenever an agent changes its state, Avaya Agent for Desktop Presence changes according to agent state.
- Whenever an agent changes state to **Do not disturb**, the Presence shows Do not disturb. From Agent point of view, **Do not disturb** is an Aux agent state with specific reason code.
- Whenever an agent logs out or application is closed, Presence shows offline state.

Table 1:

Main window icon	Agent State tooltip	Presence	Presence Note
Ø	Ready	Available	-
0	Ready (on a Call)	On a phone	On a call
•	Ready (on a Call)	On a phone	ACD call
C	Aux	Away	A reason code description

Table continues...

0	After Call Work	Busy	After Call work
-	Do not disturb	Do not disturb	Do not disturb
0	Offline	Offline	-

About Contact list Presence

- An agent can view the Presence of agents for whom Presence is configured and active. Both the agents must be in the same domain as observer.
- Key value is work phone. Avaya Agent for Desktop uses work number as base of subscription address.
- A column in the Contact list represents a Contact list Presence with tool tip. A tool tip is a presence note.
- If a contact is added during an active agent work session, Presence initially shows offline. But after sometime, the status is updated.

Table 2:

Contact icon	Contact Agent state	Contact Presence	Contact Presence tool tip
Ø	Ready	Available	-
0	Ready (on a call)	On a phone	On a call
•	Ready (on a call)	On a phone	ACD call
(Aux	Away	Aux : with aux description
0	After Call Work	Busy	After Call Work
•	Aux	Do not disturb	Do not disturb
0	Offline	Offline	
0	Unknown	Unknown

Viewing the Presence feature

About this task

The following procedure provides a sample Presence feature view

Before you begin

Ensure that you are using Avaya Agent for Desktop in either a shared control mode with Avaya Agent for Desktop on both side (Controlled and controlling) or My Computer mode.

Note:

You must be sure that Avaya Agent for Desktop is using TLS connection. To activate this feature, your administrator must enable the Presence option in your Avaya Agent for Desktop settings and configure SIP endpoint for Presence Services

Procedure

In the bottom bar widgets, click the **Contacts** icon.

The system displays the Contacts widget window. If the Presence option is active, you will see the presence status of the contacts on the Contacts window.

Glossary

After Call Work An agent state consisting of work related to the preceding Automatic Call

Distribution (ACD) call.

Automatic Call A programmable device at the contact center. Automatic Call Distribution

(ACD) handles and routes voice communications to gueues and available

(ACD) handles and routes voice communications to queues and available agents. ACD also provides management information that can be used to

determine the operational efficiency of the contact center.

Aux The Aux or Auxiliary message indicates that the agent is not ready for

ACD calls. However, agents can make or receive calls on the station

while in the Aux state.

Aux-Work In Avaya Agent and Avaya Agent Web Client, the agent status in which

the agent is logged in but unavailable to receive a new contact.

Avaya Agent Avaya Agent for Desktopis a client application for a contact center agent,

whichAvaya Agent for Desktop supports multiple OS platforms and use

cases, such as VDI and standalone deployments.

Log Out To log out of the Avaya Agent for Desktop station and change the agent

state to offline mode.

VDI

Avaya Virtual Desktop Infrastructure (VDI) is a product developed for enabling desktop virtualization, encompassing the hardware and software systems required to support the virtualized environment. Avaya Virtual

Desktop Infrastructure is designed to function with:

• The VDI Virtual Machine: A virtualized server for accessing the call

handling features remotely.

• The VDI Thin Client: A hardware device that has minimal system requirements and is used for hosting the VDI Client software.
