

## Re-hosting/Moving RTU

**Audience:** Customer

**Module Scope:** The process of how to move activated license quantities from one license host (the machine on which the license entitlements are activated) to a another license host.

# Rehosting

- ▶ There are multiple scenarios that would require a license rehost. An example might be the hard drive on the server has failed.
- ▶ All of the software installed on that drive must be moved to a new machine.
- ▶ The rehost function checks that:
  - The installed licenses have not already been moved the maximum number of times
  - The licenses to be rehosted do not conflict with licenses already installed on the new machine
- ▶ Rehosting also supports partial moves of entitlements from one Host ID to another.

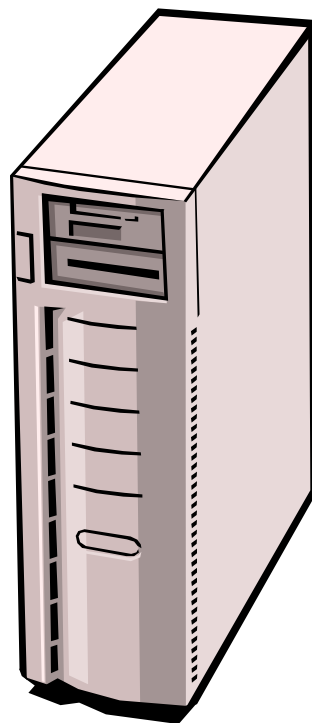

# Rehosting

## Rehost Licenses: Example

Server 1

Host ID: 12-34-56-78-90-01

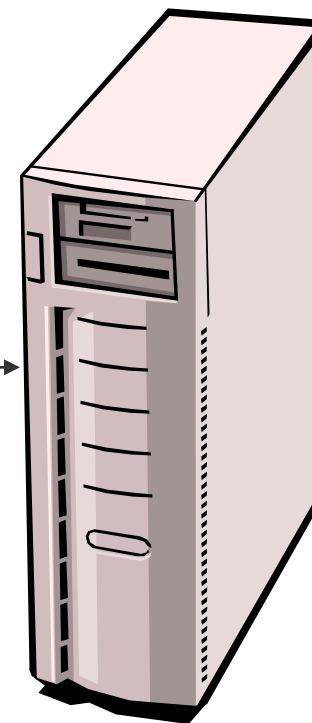

12 Licenses

Server 2

Host ID: 23-45-67-81-78-91

0 Licenses

Rehost

### Annotation

### Key

[Save to File](#)

[View key](#)

The Avaya logo is rendered in a bold, white, sans-serif typeface. The letters 'A', 'V', and 'A' are all uppercase and share a similar height. The letter 'Y' is lowercase and significantly shorter than the uppercase letters, creating a distinctive, modern look. The background is a vibrant red with subtle, wispy white patterns that suggest motion or energy.
