The 4610 Telephone

Overview of the 4610

This guide covers the use of the Avaya 4610 telephone, running in Key and Lamp mode, on Avaya IP Office telephone systems operating with Level 3.0 software. The diagram below shows the main 4610 telephone features.

1. **Display, Call Appearance and Feature buttons:** The Call Appearance Keys allow the user to handle multiple calls with the display showing call information, e.g. the name/phone number, etc. There are four pages in the display; giving (at default) three call appearance lines and up to 21 system features that can be allocated to the function keys. See Call Appearance Keys on page 8 and Function Keys on page 27. The information displayed varies according to the active feature.

2. **Message waiting lamp:** Lit continuously when the user has voicemail messages waiting. Can also be set to flash when the phone is ringing.

3. **Softkeys:** Used to navigate to or initiate certain features, such as Speed Dial or Call Log, as well as control certain actions within the features. These keys correspond to the text prompts in the display screen immediately above them.

4. **Page Right/Left:** Shifts from one page to another in the same application when the display presents the paging indicator (↩️). These buttons have no effect when the paging indicator is not displayed.

5. **Options:** Displays the Options main screen, from which display and application settings can be updated.
6. **Call Handling Buttons:** See Basic Call Handling Features on page 10.
   - **Hold:**
     Red button used to place a call on hold
   - **Transfer:**
     Transfers a call to another phone
   - **Conference:**
     Sets up conference calls with more than one other person.
   - **Drop:**
     Drops the current call or, if on a conference call, drops you from the conference.
   - **Redial:**
     Redials the last number dialed or displays the last 6 numbers dialed from the phone, depending on configuration via the Options menu.

7. **Numeric (Dialing) Pad:**
   Standard 12 button pad for dialing phone numbers.

8. **Volume Controls:**
   Adjusts the handset, speaker, headset, or ringer volume, depending on which item is in use. As you increase or decrease the volume, the top display area provides either a speaker, headset, handset, or ringer icon to indicate for which item you are adjusting volume, followed by a visual “volume meter” showing the volume level. These buttons also control the volume of the key click sounds made when you press fixed buttons on the phone, such as the dial pad or softkeys.

9. **Mute and LED Indicator:**
   Turns off the active Speaker, handset, or headset microphone to prevent the other person from hearing you. The associated LED lights steadily when the handset or headset is muted.

10. **Headset and LED Indicator:**
    With a headset connected, changes audio control from the handset or speaker to the headset. The associated LED lights steadily when the headset is active.

11. **Headset Jack:**
    Located on the side of the telephone and provides a port for connecting a headset.

12. **Speaker and LED Indicator:**
    Access the speakerphone. The light associated with this button turns on when the speakerphone is active.

13. **Phone/Exit:**
    Displays the phone application main screen or, if applicable, exits the current IP Office based feature, such as Speed Dial or Call Log, and normalizes the display.
Call Appearance Keys

Normally, the first page of the main call handling screen contains three keys set as 'call appearance' keys. These are allocated to you by your System Administrator and are indicated as \( a = \), \( b = \) and \( c = \).

![Call Appearance Keys Diagram]

Your System Administrator can change a call appearance key with:

- **A Bridged Appearance**
  A bridged appearance key matches the status and operation of the Call Appearance Key on a pre-defined colleague’s telephone. Hence, you can pick-up, make and receive calls on behalf of your colleague.

- **A Line Appearance**
  An IP Office exchange line (but not IP lines) can be allocated to you such that the status of that line is displayed and you can use the line appearance key to make and receive calls.

- **Call Coverage Appearance**
  A call coverage appearance key alerts you when a pre-defined colleague is receiving a call. The covered user does not need to be using call appearance keys. Hence, you can pick-up calls on behalf of your colleague.

*All of the above can only be allocated to you by your System Administrator.*

For details of Bridged, Line and Call Coverage Appearance Keys set-up and their operation, refer the *IP Office Key and Lamp Operation* manual.

**CAUTIONS:**

1. Having **more than two** Call Appearance keys is very useful. When holding a call you can answer/make another call and then switch between calls or transfer or conference. If you are set to receive *call waiting* indication, the waiting call is shown against the next call appearance key.

2. Although the System Administrator can replace the Call Appearance Keys with:
   - A Bridged Appearance
   - A Line Appearance
   - Call Coverage Appearance
   - System Features

   This would severely restrict the use of features such as conference and transfer.

   **It is for these reasons that it is strongly recommended that all Call Appearance keys remain at their default settings.**

System Features

System Features **can only be** set against soft Function Keys by your System Administrator. However, your System Administrator may allocate you two ‘self administrator’ features that will enable you to add System Features to your soft Function Keys. Refer to *Function Keys* on page 27 for details of the System Feature that can only be allocated to you by your System Administrator.

In addition, there are a number of System Features that you **can always access yourself** by the use of short codes. Refer to System Features on page 55 for details of System Features that you **can always access** yourself by dialing short codes, e.g. *17 to listen to your VoiceMail messages.
Call Appearance/Function Key Icons

The icons displayed against the Call Appearance/Feature Keys allow you to determine the status (for example, on Hold) of each call. Icons also indicate whether a feature has been activated for a particular button.

- **Incoming Call:** 📞
  A 📞 symbol next to a call appearance key indicates an incoming call. Pressing the adjacent ➡️📞 key answers the call and puts any other current call on hold.

- **Connected:** 📞
  A 📞 symbol next to a call appearance key indicates that it is the currently connected call. The caller's telephone number (if available) is also shown. Pressing the adjacent ➡️📞 key puts the call on hold. An 📞 is also shown on the display.

- **On Hold:** 📞
  A 📞 symbol next to a call appearance key indicate a call on hold. Pressing the adjacent ➡️📞 key takes the call off hold and puts any other current call on hold.

- **Function Active:** ⬅️ or ⬆️
  The button to the left or right of the function key is active.
Basic Call Handling Features

Answer a Call

When a call arrives at your 4610 telephone, you hear a ringing tone and a blinking bell (🔔) icon appears against the associated call appearance key.

To answer an incoming call:
Do one of the following:
- If you are not active on another call, answer the call using your handset, headset, or speakerphone (see Speakerphone on page 11).
- If you are active on a call already, place the active call on hold (see Hold on page 12), and then answer the incoming call by selecting the call appearance key.
- If the call appearance for the ringing call is not displayed on the current screen page, use ✖️ to return to the first page of the Home screen. When you locate the call appearance for the ringing call, press the corresponding call appearance button.

Making a Call

You can make calls from the 4610 telephone using a variety of methods as follows:

To manually make a call:
1. Dial the required number on the key pad (remember to include the required access code (for example, 9) for an outside line) and listen to the progress of the call.
2. Adjust speakerphone volume as necessary.
   - To change the volume use the ❯ and ◀ buttons. The display shows the volume level. (There are eight volume levels.)
3. If the call is not answered, you can clear the call by pressing 💁 Speaker or 🖤 Drop
or
4. When the call is answered, either speak or pick up the handset and speak to the called party.

To automatically make a call:
Do any of the following:
1. Press 📠 Redial and select from (up to) one of the last three numbers that you dialed by pressing the associated call appearance key ✅. The call is made automatically for you.
   or
   Access the Call Log and initiate a call to a specific entry.
   See Error! Reference source not found. on page Error! Bookmark not defined..
   or
   Access the Speed Dial List in your personal directory and initiate a call to a specific entry. See Speed Dials on page 14.
2. When the call is answered, either speak or pick up the handset and speak to the called party.

Clearing a Call

To clear an established call either:
1. Replace the handset
or
2. Press 🎤 Drop. You will hear dial tone.
Headset Working

When a headset is to be used on your 4610, it must be plugged in to the headset socket on the side of your 4610 telephone. To activate the headset and switch off the handset, press 🎤 Headset. The lamp beside the button is illuminated when headset working is activated.

**To answer an incoming call:**
1. Press the call appearance key next to the flashing bell icon (dux):

**To clear a headset call:**
1. Press 🛡️ Drop.

**To manually make a call:**
1. Dial the number (remember to include the required access code (for example, 9) for an outside line) and listen to the progress of the call.

**To automatically make a call:**
Do any of the following:
1. Press 🔄 Redial and select from (up to) one of the last three numbers that you dialed by pressing the associated call appearance key 🎤. The call is made automatically for you.
   or
   Access the Call Log and initiate a call to a specific entry. See To Make a Call from an Individual Log entry on page 19.
   or
   Access the Speed Dial List in your personal directory and initiate a call to a specific entry. See Speed Dials on page 14.
2. When the call is answered, speak to the called party.

Speakerphone

The two-way built-in speakerphone allows you to make and answer calls without lifting your handset. Keep in mind that two-way speakerphones may not operate satisfactorily in every environment (such as in very noisy locations) and that they operate best when you speak directly to them.

**To make or answer a call without lifting the handset, or to use the speakerphone with any feature:**
1. Press 🎤 Speaker. The LED beside the button illuminates.
2. Make or answer the call, or access the selected feature.
3. Adjust speakerphone volume if necessary.
   - To change the volume use the ‹ and › buttons. The display shows the volume level. (There are eight volume levels.)

**To change from the speakerphone to handset (or headset if fitted)**
1. Pick up the handset (or press 🎤 Headset) and talk.

**To change from the handset to the speakerphone**
1. Press 🎤 Speaker. The LED beside the button illuminates.
2. Hang up the handset.

**To end a speakerphone call**
1. Press 🎤 Speaker again. The LED beside the button goes out.
**Speed Dial**

The Speed Dial feature allows you to have the 4610 telephone automatically dial calls to telephone numbers stored in your personal directory (maximum of 48).

See Speed Dials on page 14.

**To make a call to a personal directory entry using the Speed Dial feature:**

1. Press the SpDial softkey. The Speed Dial screen is displayed.
2. Press the button next to the entry you want to call.
3. If the entry you want is not displayed, use ← and → to cycle through the entries or key the first letter of the required name to jump to the page with a matching entry.
4. The 4610 telephone dials the number for you.

---

**Redial**

The Redial (or Last Number Dialed) feature automatically redials a previously dialed extension or outside number (up to 24 digits). Your 4610 will store the up to three of the last numbers dialed.

**Note:** If you have dialed the same number twice in succession, it will only have one appearance in the redial list.

**To redial previously dialed number:**

1. Press Redial. Use ← and → to step through the entries. When you have located the required number, press the associated key.

---

**Mute**

During an active call, the Mute feature prevents the party with whom you are speaking from hearing you. This feature is most commonly used in conjunction with the Speakerphone, but can be used to hold an off-line conversation at any time during a call.

**Preventing the other person on the line from hearing you:**

1. Press Mute. The other party cannot hear you.
   - The indicator next to the Mute button lights when Mute is active.
2. To reinstate two-way conversation, press Mute again.

---

**Hold**

If, with a call in progress, a second call arrives and is shown against a Call Appearance key, you can then Hold the first call and answer the second call.

**To put an existing call on hold:**

1. Press Hold or the Call Appearance button with the symbol against it. The symbol changes to showing that the line is on hold.
2. Answer the second call by pressing the Call Appearance button with the symbol against it. The symbol changes to showing that the line is connected.

**To return to the held call:**

1. If you have a call in progress, then first put that call on hold as above.
2. To retrieve a held call, simply press the Call Appearance button with the against it.

**Notes:**

1. After a pre-set time (defined by your System Administrator), you are reminded that you have a call on hold by the hold icon changing for a few moments to with the phone ringing.
2. If the system feature AutoHold is on (consult your System Administrator) then you can hold an active call by pressing the second call’s Call Appearance button. If AutoHold is off, then pressing the second call’s Call Appearance button will drop the first call.
3. To transfer a held call see Transfer on page 13.
Transfer

The Transfer feature allows you to transfer a call from your telephone to another extension or outside number.

To transfer the current call to another extension
1. With a call in progress, press Transfer.
2. When you hear dial tone, dial the number to which the call is to be transferred.
3. Do one of the following:
   • To transfer the call without announcing it, either hang up or press Transfer again. The transfer is complete. If the transferred call is not answered within a preset time, it is returned to you.
   • To announce the call before transferring it, wait for the called party to answer. If the called party is willing to accept the call, press Transfer again to complete the transfer. If the called party does not wish to accept the call, press Drop. You can return to the held call by pressing its call appearance button.
   • If the line is busy or if there is no answer, press Drop. You can return to the held call by pressing its call appearance button.

To transfer a new call to a held call using Conference:
1. With a call in progress and you wish to make an enquiry call or another call arrives, press Hold. Make or answer the second call. The new call requires to be transferred to the first held call.
2. To transfer the new call to the held call, press Conference and then Drop. The transfer is complete.

Conference

The Conference feature allows you to conference other parties (including yourself) into a call.

Notes:
1. The number of parties allowed in a conference is controlled by your telephone system.
2. Two Call Appearance keys are required for the conference feature.

To add another party to a call:
1. With a call in progress press Conference. The existing call is put on hold.
2. Dial the number of the person you want to add to the call.
3. Wait for an answer.
   • If the called party does not answer or does not want to join the conference, press Drop. You can return to the held call by pressing its call appearance button.
4. To add the person to the call, press Conference again.
5. Repeat steps 1 through 4 for additional conference connections.

To add a held call(s) to an active call:
1. Press Conference.
2. All held calls are added to the conference.

To leave a conference call:
1. To leave a conference, press Drop.
The 4610 can store up to 48 personal speed dials, accessed by selecting SpDial on the display.

- The speed dials are sorted alphabetically.
- Pressing the or key adjacent to a name, dials the speed dial number stored with that name.
- The symbol indicates that there are more pages. You can more between pages using the Page Left and Page Right keys.

Pressing Add allows you to add a new speed dial. See Adding a New Speed Dial on page 16.

You can also press Edit to display an existing speed dial and edit it’s current settings. See Editing a Speed Dial on page 15.

Note: Speed dials can be used for any numbers that can be manually dialed from the extension. Where, for external calls, a dialing prefix is required then that prefix must be part of the speed dial number.
Using Speed Dials

Dialing a Speed Dial

You can use the speed dial directory to make a call with the handset on hook or off hook.

1. Press \(\text{SpDial}\) to display the speed dial directory.
2. The \(\leftrightarrow\) symbol is shown if there is more than one page of speed dials. You can move between pages using the \(\text{Page Left}\) and \(\text{Page Right}\) keys.
3. When the speed dial required is shown on the screen, press the \(\rightarrow\) or \(\leftarrow\) key adjacent to the speed dial name.
4. Continue as per a normal call.

Adding a Speed Dial from the Call Log

You can create a new speed dial from a call log entry. See To Turn a Log Entry into a Speed Dial on page 20. This process will start the normal speed entry screen but pre-filled with the name and number from the call log entry.

Editing a Speed Dial

1. Press \(\text{SpDial}\)
2. Press \(\text{Edit}\).
3. Select the speed dial entry you want to edit.
   - Press \(\leftarrow\) and \(\rightarrow\) to display different pages of speed dials.
4. When the required entry is displayed, press the adjacent \(\rightarrow\) or \(\leftarrow\) key.
5. Edit the speed dial using the same methods as for adding a new speed dial. See Adding a New Speed Dial on page Error! Bookmark not defined.
6. Press \(\text{Save}\) to return to the speed dial list.

Deleting a Speed Dial

1. Press \(\text{SpDial}\)
2. Press \(\text{Delete}\).
3. Select the speed dial entry you want to delete.
   - Press \(\leftarrow\) and \(\rightarrow\) to display different pages of speed dials.
4. When the required entry is displayed, \(\text{Delete}\) again or \(\text{Cancel}\) to exit without deleting.
5. Select another entry to delete or press \(\text{Exit}\) to return to the speed dial list.
Adding a New Speed Dial

1. Press <SpDial> followed by <Add>. If a message stating that the speed dial list is full appears, you must first delete an existing entry before adding any new entry. See Deleting a Speed Dial on page15.

2. The cursor, a | symbol, is initially in the empty name field.
3. Begin entering text using the telephone keypad. Each key is marked with the letters it provides. You may have to press the key more than once depending on the character you require.

   - For example, the 2 key is also marked as A, B and C. To enter a C press the key until a C is displayed.
   - To enter the next character from the same key, e.g. a, press ↑ to move the cursor right and then enter the character or simply press another key.
   - If you make a mistake, use ← or → to move the cursor to the right of the incorrect character and then use Backspace to delete it.

4. As you enter the Name characters you can use a number of other controls.
   - Case - Change the case of the current character between upper and lower case.
   - ↑ - Moves the cursor right one character.
   - ← - Moves the cursor left one character
   - Clear - Delete the whole name.
   - Backspace - Delete the character to the left of the cursor.
   - Symbol provides access to the following symbols: Period (.), Comma (,), Hyphen (-), Space (inserts a space between characters), Slash (/) or Apostrophe (').
   - Done - Saves the speed dial changes.
   - Cancel - Return back to the speed dial directory without making any changes.

5. When the Name has been entered, press <Done>.
6. The **Number** menu is displayed. Enter the required number, including any external line access digit (9 say):

- If you make a mistake, use ⤪ or ⤪ to move the cursor to the right of the incorrect character and then use ⤪ **Backspace** to delete it.

7. As you enter **Number** characters you can use other controls.
   **Note:** The controls on this screen are context sensitive, i.e. they only appear when applicable. For example **Save** only appears when both a name and number have been entered.
   - ⤪ - Moves the cursor right one character.
   - ⤪ - Moves the cursor left one character.
   - ⤪ **Clear** - Delete the whole number.
   - ⤪ **Backspace** - Delete the character to the left of the cursor.
   - ⤪ **Symbol** provides access to the following symbols:
     - Period (.), Pause (a 1.5 second pause for each press), Hyphen (-), Space (inserts a space between characters), Left or Right parenthesis ( ).
   - ⤪ **Save** - Save the speed dial changes.
   - ⤪ **Cancel** - Return back to the speed dial directory without making any changes.

8. When the **Number** has been entered, press ⤪ **Save**.
Using the Call Log

Overview of the Call Log

The 4610 maintains a call log, accessed by selecting Log on the display. The call logs keep logs of missed calls, outgoing calls made and incoming calls answered. Each of these logs includes the 15 most recent calls in its category. The details shown are:

- The name of the called or calling party if available.
- The number of the called or calling party.
- The time of the call.
- The date of the call if prior to the current day.
- The symbol indicates that the log contain more pages of entries. You can more between pages using the Page Left and Page Right keys.

Note: Only outgoing calls made using the dial pad or a SpDial entry are logged. Pressing the or key adjacent to a log entry displays full details of that log entry:

Each individual log entry includes:

- The number of the called or calling party.
- The time of the call.
- The date of the call.
- The duration of the call for outgoing and answered calls (not shown above for missed calls).
Using the Call Logs

Apart from using the call logs for information, you can turn a call log entry into a speed dial for future calls. You can also delete individual log entries or the all entries in a particular log. The following paragraphs detail how to use the Logs.

**Note:** Call log entries are lost whenever the telephone system or the individual 4610 telephone are reset.

### To Access the Call Logs

1. Press Log.
2. The call log always opens in the Missed calls log.

- **Missed:** The log of missed calls, i.e. those that rang your extension but were not answered. This includes calls that were diverted to voicemail or another number after ringing your extension.

3. To select the log required type press either
   - **InAns:** The log of incoming calls that were answered. This includes both internal and external calls.
   - **Outgo:** The log of calls made. This includes both internal and external calls.
4. If the selected log contains more than one page of entries, the Page Left and Page Right keys to move between pages.

### To Display an Individual Log Entry

1. Locate the log entry in which you are interested from Missed, InAns or Outgo.
2. Press the or key adjacent to the entry.
3. The log entry details are shown.
4. Using Return key to return to the call log.

### To Make a Call from an Individual Log entry

1. Locate the log entry in which you are interested from Missed, InAns or Outgo.
2. Press the or key adjacent to the entry.
3. The log entry details are shown.
4. Press Call make the call.
   - If the number shown is external but doesn't include the external dialing prefix used by your telephone system, go off-hook, dial the prefix and then press Call.
To Turn a Log Entry into a Speed Dial

1. Locate the log entry in which you are interested from Missed, InAns or Outgo.
2. Press the or key adjacent to it.
3. Press Add to SD.
4. The screens for editing and adding speed dials will appear, pre-filled with the information from the log entry. Edit the details if required (see Editing a Speed Dial on page 15).
5. Press Save or Cancel.
6. You will be returned to the speed dials selection menu.

To Delete an Individual Log Entry

1. Locate the log entry in which you are interested from Missed, InAns or Outgo.
2. Press the or key adjacent to it.
3. Press Delete twice. Or: Press Cancel to return to the call log without deleting the log entry.
4. You will be returned to the call log.

To Delete All Entries from a Log

1. Press Log.
2. Press Missed, InAns or Outgo to select the log.
3. Press DeleteAll.
4. Select Delete to delete the log entries. Press Cancel to return to the call log without deleting the log entries.

To Exit the Call Logs

1. Press Exit.
Changing the 4610 Options

Telephone Options Overview

The **Options** button will allow viewing and configuring of certain phone settings. These options are different from the function keys that require configuration by the system administrator.

The phone settings available include:

**Application Option:**
- Displaying the Phone screen when making a call and/or answering a call.
- Determining how you want the Redial feature to work (redial the last number called or select from a list of the last three calls).
- Displaying the Call Timer.
- Changing the rate at which messages display.
- Allowing the Voice message light to flash when the telephone rings.

**Personal Ringing**
- Select from eight personal ringing tones.

**IP Options:**
- View the IP Addresses data
- View the QoS data
- View the interface data
- View miscellaneous data on the 4610 telephone.

**Contrast Control**
- Allows you to change the contrast of your 4610 telephone’s display.

**Log Off**
- Allows you to log your telephone off to prevent unauthorized use during an absence, or for privacy purposes.

**Backup/Restore**
- Provides protection of your personal options, preference setting, speed dial data, etc in the case of system failure.
  - **This option must only be used by the System Administrator.**

**Feature Button Labeling**
- Enables you to change a feature key label, e.g. SAC to DoNotDisturb.

**PC Ethernet interface**
- Displays and enables the PC Ethernet setting to be changed.
  - **This option must only be used by the System Administrator.**

**Select display language**
- Enables you to select which of eight languages is used to on your 4610 display.
  - Does not effect the language selected on the IP Office.
Application Options

Redial

Redial can be configured to dial the last number dialed or list the last three numbers dialed for you to choose from. The default is the last number dialed.

To change Redial:

1. Press Options, Applications Options and then select the Redial feature button. It will toggle between Last Number and Last 3 Numbers.
2. Select Save.
   (To restore the previous setting without changing it, press Cancel.)
3. After saving or canceling, the first Options main screen is displayed.

Phone Screen on Answer

This action controls the phone screen display when the phone is answered.

When the Phone Screen on Answer? option is set to Yes (the default setting), the phone screen appears in the display area when you answer a call, regardless of the screen you were working with at that time. You will lose any unsaved work in progress on that screen (for example, labeling a Speed Dial button).

When the Phone Screen on Answer? option is set to No answering an incoming call has no impact on the application screen displayed, although the top display line will provide an appropriate message.

To change Phone Screen on Answer:

1. Press Options, Applications Options and then select the Phone Screen on Answer feature button. It will toggle between Yes and No.
2. Select Save.
   (To restore the previous setting without changing it, press Cancel.)
3. After saving or canceling, the first Options main screen is displayed.

Phone Screen on Calling

This action controls the phone screen display when you make a call.

When the Phone Screen on Calling? option is set to Yes (the default setting), the phone screen appears in the display area when you make a call, regardless of the screen you were working with at that time. You will lose any unsaved work in progress on that screen (for example, labeling a Speed Dial button).

When the Phone Screen on Calling? option is set to No answering an incoming call has no impact on the application screen displayed, although the top display line will provide an appropriate message.

To change Phone Screen on Calling:

1. Press Options, Applications Options and then select the Phone Screen on Calling feature button. It will toggle between Yes and No.
2. Select Save.
   (To restore the previous setting without changing it, press Cancel.)
3. After saving or canceling, the first Options main screen is displayed.
Application Options

Display Call Timers
This action controls whether the duration of the current call is displayed or not. If set to Yes, the duration of the current call is displayed on the call appearance key. If set to No, the call duration will not be displayed.

To change the Display Call Timers status:
1. Press Options, Applications Options, and then select the Display Call Timers? feature button. It will toggle between Yes and No.
2. Select Save.
   (To restore the previous setting without changing it, press Cancel.)
3. After saving or canceling, the first Options main screen is displayed.

Message Display Rate
When the IP Office sends messages to your phone that are longer than the display area, the first part of the message is presented for a specific time interval. The second part of the message is then displayed for a specific time interval. The Message Display Rate can be either Fast (display interval is 2 seconds) or Slow - default (display interval is 3 seconds).

To change Message Display Rate:
1. Press Options, Applications Options, and then select the Message Display Rate feature button. This will toggle between Fast and Slow.
2. Select Save.
   (To restore the previous setting without changing it, press Cancel.)
3. After saving or canceling, the first Options main screen is displayed.

Visual Alerting
When this option is set to Yes (the default), your phone rings and your voice message indicator light flashes to alert you to an incoming call. When set to No, ringing is the only notification of an incoming call.

To change Visual Alerting:
1. Press Options, Applications Options, and then select the Visual Alerting feature button. It will toggle between No and Yes.
2. Select Save.
   (To restore the previous setting without changing it, press Cancel.)
3. After saving or canceling, the first Options main screen is displayed.
Personal Ringing

You can choose from among eight different ring patterns. This alters the tone and style of ringing used by the 4610, e.g. the number of rings will still vary according to the type of call.

1. Press Options and select Personal Ringing. A menu with the current ring pattern appears.
2. To select a ringing pattern use press Pattern 1 to 8. You will hear the selected ringing pattern.
3. When you have selected a ringing pattern, press Save. You will hear a confirmation tone and be returned to the options menu.
4. If you want to return to the options menu without changing the ring pattern, press Cancel.

View IP Settings

Views of telephone and system information are available from this screen. A user normally does not need to view this information, however your System Administrator may ask you to report certain values from any of the status screens in the event of problems.

The status screen data can be viewed, but cannot be changed from your 4610.

1. Press Options and then select View IP Settings.
2. There are two pages of display. Use and select from:
   - IP Addresses
   - Quality of Service
   - Interfaces
   - Miscellaneous.
3. To return to the first View IP Settings screen, press Return.

Each option is described in the sub-sections that follow.

IP Address Settings

IP (Internet Protocol) address information identifies certain components and connections. The IP Address information includes the location (address) of your phone on the IP Office unit, the location and port (connection) of the IP Office itself, the call routing and mask addresses, and the identification of the File Server with which your telephone interacts. Although technical in nature, having this information available and knowing how to get to it can assist your System Administrator in tracking questions about or problems with phone functions or connections.

Quality of Service (QoS) Information

QoS refers to a number of mechanisms used to improve audio quality over the network.

Phone Interface

Your phone interfaces with several system hardware devices and software. This screen provides information about three of the main interfaces.

Miscellaneous Information

The miscellaneous status screens provide additional information about your telephone and its connections.
Adjusting the Display Contrast

You can adjust the contrast level on the telephone display. You can choose from among fifteen levels of contrast.

1. Press Options and then select Contrast Control.
2. Use either the ↑ or ↓ key to adjust the level of contrast.
3. When the contrast is set as required, either:
   - Save and return to the options menu by pressing Save.
   - Press Cancel to return to the options menu.

Logging off the 4610 IP Telephone

Allows you to log your telephone off to prevent unauthorized use during an absence, or for privacy purposes.

CAUTION: Logging off deletes all Call Log entries and returns any options you may have changed to their default values.

To log your phone off:

1. Press Options and Log off.
2. Select Yes to un-register your phone from the IP Office, delete all Call Log entries and returns any options you may have configured to their default values.
3. Selecting No returns you to the main Option menu; your phone remains logged on to the network and your Call Log and options values remain unchanged.

To log back on:

1. The display will show Ext.=xxx in the top row. Simply press # and enter your password (consult your System Administrator).

Backup/Restore Options

The 4610 IP Telephone's backup/restore options require set up and configuration by the system administrator prior to use. These options are displayed on the telephone screen via the Options button, but will only be amendable if they have been configured by the system administrator.

The backup/restore options provide the ability to:

- Back up your options/preference settings, your Speed Dial button labels, names, and numbers automatically whenever you save a change to any one of those settings or buttons. Automatic backup protects this data against system failure.
- Restore options settings and Speed Dial button labels, names and numbers following a phone failure or replacement.
- Establish or modify FTP (File Transfer Protocol) settings such as the network server address, directory path for saving backed-up data, and a User ID and Password for server access via your phone.
- Verify whether an automatic backup has occurred.

Because each telephone system has unique characteristics and settings, modifying the Backup/Restore options generally require the assistance of the System Administrator. For example, it is unlikely that a 4610 IP Telephone user would know the specific Server IP Address to enter when setting up FTP parameters. Hence:

Due to the technical nature of this feature, it is highly recommended that this feature is only used by the System Administrator.
Language Selection

When the 4610 telephone is first installed, it is set to display screen text in English. You can select the language that you would prefer from the following:

- English
- German (Deutsch)
- French (Français)
- Spanish (Español)
- Italian (Italiano)
- Dutch (Nederlands)
- Portuguese (Português)
- Japanese (Katakana characters)

Note: This does not alter your user language setting on the telephone system.

1. Press Options and Language.
   A menu listing the available languages appears.
2. Press the or key next to the language required. You are asked in the original language "Are you sure?" with the same message in the new language below.
3. Do one of the following:
   - To return to the options menu without saving any changes, press Return.
   - To save the settings and return to the options menu, press Yes (which is displayed in both the original and the selected language).
Overview of the Function Keys

Both the Function Keys and Soft Keys can be used to access a range of system features. The display adjacent to the key shows the feature name.

Some of these features are default features supported by all 4610 telephones (e.g. SpDial and Log on the Soft Keys) and are always available. Others are system features that can only be programmed by the System Administrator for Function Keys. See Function Key Programming on page 28.

In addition, there are a number of System Features that you can always access yourself by the use of short codes. Refer to System Features on page 55 for details of System Features that you can always access yourself by dialing short codes, e.g. *17 to listen to your VoiceMail messages.

The main screen has three pages. This means that the six Function Keys on each page could be used for up to 18 features. However, it is strongly recommended that all three Call Appearance keys remain at their default settings. Hence, there are 15 soft Function Keys that can be allocated to system features.

To move between pages use the and keys.

In the following example:

- The first three keys have been set (default setting) as call appearance lines. See Call Appearance Keys on page 8.
- Key 4 has been set to access the Admin programmable functions. See Function Key Programming on page 28.
- Key 5 has been set to monitor system park slot 1. The indicates a call is currently parked in slot 1 by the user and when parked in a slot by other users, the label is underlined. See Park - Park (#) on page 46.
- Key 6 has been set to the SAC (Send All Calls) function. See SAC - Send All Calls (!) on page 51.
- Pressing either or will display the other page of programmed functions set for this phone.

![Diagram of Function Keys and Soft Keys]

**Programming Your Own Functions:**
If the phone has been setup with either or both the Admin and Admin1 features assigned to display keys, you can select and program your own feature choices against other keys. See Function Key Programming on page 28.
Function Key Programming

If any one of the keys on the telephone is programmed with an Admin or Admin1 feature, it allows you to program further features against other function keys. Both Admin and Admin1 are allocated to your function keys by your System Administrator and would appear on a menu screen that is similar to the following:

![Menu Screen]

The two tables below list the user programmable features available for Admin and Admin1 respectively. For full details of how each feature works see Function Key Features on page 31.

**Admin:** The programmable functions available via an Admin key.

</tbody>
</table>
Shorthand Programming Mode

1. Press Admin or Admin 1. See Function Key Programming on page 28.
2. The Admin or Admin1 menu appears as follows:

### Admin Pages

<table>
<thead>
<tr>
<th>Feature</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Expl?</td>
<td>4:51pm 1/20/05</td>
</tr>
<tr>
<td>Dir</td>
<td>&lt;&lt;&lt;</td>

<td>&gt;&gt;&gt;</td>
</tr>
</tbody>
</table>

3. On the Admin pages, use the and keys to move through the list of features.
4. When the function required is shown, press the key adjacent to its name.
5. If the function requires some data to be entered, [ is shown at the bottom of the display. Enter the data using the normal telephone keypad.
6. The upper part of the display reverts to showing the functions currently assigned to each and key.
7. Select the display key against which to program the new function by pressing that or key.

**CAUTION:** Do not select the slot used for the Admin function. Replacing this function will lock the phone for further programming until reset through the telephone system by your System Administrator.

8. If the display slot is not already used, the display shows BUTTON PROGRAMMED!.
   - Press EXIT to end programming
   - Press Cont to continue programming other functions.
9. If the display slot already has a programmed function, the display shows FEATURE ON BUTTON.
   - Press REPLA to replace that existing function with the one just programmed. The display then shows BUTTON PROGRAMMED! As in step 8 above.
   - Press KEEP to keep the existing function and forget the function just programmed.
   - Press DELETE to delete the existing function and forget the function just programmed.
Longhand Programming

2. Pressing Expl? to switch to longhand programming mode.
3. Press Next until the required feature required is shown, then press Selct.
4. If the feature requires some data to be entered, [ is shown at the bottom of the display. Enter the data using the normal telephone keypad.
5. The upper part of the display reverts to showing the features currently assigned to each and key.
6. Use the and keys to move between the pages of display keys.
7. Select the display key against which to program the new feature by pressing that or key
   CAUTION: Do not select the slot used for the Admin function. Replacing this function will lock the phone for further programming until reset through the telephone system by your System Administrator.
8. If the display slot is not already used, the display shows BUTTON PROGRAMMED!. Press the or keys until EXIT is shown.
   • Press EXIT to end programming or
   • Press Cont to continue programming other functions.
9. If the display slot already has a programmed function, the display shows FEATURE ON BUTTON.
   • Press Repl to replace that existing function with the one just programmed. The display then shows BUTTON PROGRAMMED! as above.
   • Press Keep to keep the existing function and forget the function just programmed.
   • Press Delete to delete the existing function and forget the function just programmed.
Function Key Features

This section lists the features that can be programmed against and Function Keys. Both the shorthand and longhand names are shown. The shorthand name is the name that is displayed next to the programmed key, along with any data programmed for the feature.

Those functions marked with a (!) or an(#) can be programmed by the 2420 user. This programming requires the phone to already have a soft key assigned to the Admin (for ! functions) and/or to Admin1 (for # functions). See Function Key Programming on page 28 for lists of Admin and Admin1 functions.

All of the following functions can be programmed onto your 2420 by your System Administrator. The command path for the System Administrator is shown, for example:

[User | Digital Telephony | Emulation | Directory].

Dial (#)
Automatically dials the displayed number.

This function requires entry of the number to dial when programmed. The number is then displayed next to the key. This function can be programmed through the phone by the user using an Admin 1 key.

Pressing the Dial key dials the associated number.

[User | Digital Telephony | Dial]

See also:
- AD - Abbreviated Dial (!) on page 32.
- Prog - Abbreviated Dial Program (!) on page 48.

Group (#)
Answer or clear calls ringing a specific group.

This function requires entry of the group number (allocated by your System Administrator). When programmed, the group name is then displayed next to the Admin 1 key.

A ✿ appears against the group when calls to that group are ringing. Pressing displays details of one of those calls and options to drop (Drop) the call, answer the call (Answ) or exit the group monitor (EXIT).

[User | Digital Telephony | Group]

User (#)
See the status of a specific user, call that user and pick-up calls to that user.

When programmed by your System Administrator (on the IP Office), the user name is entered. That name is then displayed next to the key. This function can also be programmed through the phone by the user using an Admin 1 key and then the user number.

The when the user is called the user name is underlined with a ⬅️ symbol beside it. Press the key next to the name. DkPickup appears against a call appearance key. To pick up the call press this key.

If the System Administrator has setup group monitoring of the same user, pressing the user key when the user is busy on a call displays several options. These are Drop (end the user's call), Listn (listen to the call), and Aquir (takeover the call). If the System Administrator has not setup group monitoring, then the options shown are Call, Message, Vmail and CallB.

[User | Digital Telephony | User]
**Absnt - Set Absent Text**
Set the users current absence message setting.
This function is currently not supported on the 2420 telephone.

---

**Acct - Account Code Entry (!)**
Make a call using an account code or enter an account code during a call.
This function can be programmed with or without data. This function can be programmed through the phone by the user using an Admin key.
If programmed with data, the account code entered when programmed must match a valid account code set on the telephone system. The Acct key displays that number.
If programmed without data, ENTER ACCOUNT is displayed after Acct is pressed. Enter an account code and press Set.
If the account code entered does not match a valid account code set on the telephone system, RENTER ACCOUNT is displayed.
An Acct key can be pressed before or during a call.

---

**AD - Abbreviated Dial (!)**
Dial the displayed number.
This function requires entry of a number to dial when programmed. The AD key displays that number. This function can be programmed through the phone by the user.
The number does not have to be a complete number, the user can dial additional digits after pressing AD. * and # can be entered in the number to match IP Office shortcodes.

---

**Admin - Self-Administer (!)**
Access menus for programming functions against display keys.
This function can be programmed with or without data. If programmed with a setting of 1, the key accesses a different set of functions. See Function Key Programming on page 28. This function can be programmed through the phone by the user using an existing Admin key.
The Admin key gives access to the menus for programming functions against and keys.
Apear - Appearance
Add a display line for call appearances with symbols being displayed for Incoming Calls, Connected and On Hold. See Call Appearance Keys on page 6.
This function does not require any data entered when programmed. However it is normal to enter some text such as a=, b= and so on for each call appearance key.
This function cannot be programmed through the phone by the user.

[User | Digital Telephony | Emulation | Appearance]

AutCB - Automatic Callback (!)
Sets a callback when free on busy extensions and callback when next used on unanswered extensions.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an Admin key.
When the called target extension does not answer or is busy, pressing AutCB sets a callback on that extension. Whilst the callback is set, AutCB is shown with a symbol. Pressing AutCB again cancels the callback.
Hence, when the callback target extension becomes free or is next used, pressing starts a call to that extension.

[User | Digital Telephony | Emulation | Automatic Callback]

See also:
• RBak - Cancel Ringback When Free on page 49.
• RBak+ - Ringback When Free on page 49.

Busy - Busy
Sets the extension as being busy. This feature is not applicable when working with multiple Call Appearance lines as all the call appearance lines must be in use before this function becomes active.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The Busy key sets the extension as busy to callers. If a forward on busy number is set, it is followed (see FwBNo - Forward On Busy Number on page 39). Otherwise calls go to voicemail if on or receive busy tone if internal and ringing if external.
To return the extension from busy, press Busy and then Speaker.

[User | Digital Telephony | Advanced | Busy | Busy]

BusyH - Busy On Held
Switch the users busy on held status on/off.
This function requires data entered when programmed. Enter 0 for off or 1 for on.
This function cannot be programmed through the phone by the user.
Pressing BusyH switches the user’s ‘busy on held’ state to either on or off as indicated by the data value. When on, if the user has a call on hold, new callers receive busy tone (ringing if analogue) or are diverted to voicemail (if enabled), rather than ringing the user. This function also overrides call waiting indication when the user has a call on hold.

[User | Digital Telephony | Advanced | Busy | Busy On Held]
**CFrwd - Call Forwarding All (!)**
Switch call forwarding on/off and set the forwarding number.
This function can be programmed with or without a target forwarding number. This function can be programmed through the phone by the user using an Admin key.
If programmed with a forwarding number, that number is shown next to CFrwd.
Pressing CFrwd switches on forwarding to that number.
If programmed without a forwarding number, when CFrwd is pressed, the user's current forwarding number setting is shown. Change the number using the telephone keypad and to backspace. When the number set as required press Done .
When call forwarding is on, CFrwd is shown with a symbol and D (Diverted) is shown at the top of the display. To switch call forwarding off, press CFrwd again.

[User | Digital Telephony | Emulation | Call Forwarding All]

See also:
- FwNO - Forward On No Answer On on page 40
- FwUOn - Forward Unconditional On on page 41.
- FwdNo - Forward Number on page 40.
- FwdH+ - Forward Hunt Group Calls On on page 39

**ClrCW - Clear CW**
Clears the current connected call and connects any waiting call. This feature is not applicable when working with multiple Call Appearance lines.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
Pressing ClrCW disconnects the extension's current call and connects any waiting call.

[User | Digital Telephony | Advanced | Call | Clear CW]

**CnfRV - Conference Meet Me**
Allows the extension to join a specified conference.
This function requires the conference number to be entered when programmed. That number is then shown next to CnfRV. This function cannot be programmed through the phone by the user.
Pressing CnfRV places the extension into the specified conference. Note that the number of conference parties allowed at any time is determined by the telephone system.

[User | Digital Telephony | Advanced | Call | Conference Meet Me]

**Conf+ - Conference Add**
Places all calls held by the extension into a conference.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
Pressing Conf+ places the extension and any calls it has put on hold into a conference. This function will not work if the extension has a current call.

[User | Digital Telephony | Advanced | Call | Conference Add]
CPark - Call Park (!)
Park the current call.
This function can be programmed with or without data. This function can be programmed through the phone by the user using an admin key.
If programmed with data, the number entered is shown next to the CPark key and is the number assigned to the parked call.
If programmed without data, the key displays just CPark. Calls parked using this key are is assigned a number based on the parking extensions number. For example, extension 290's first parked call is numbered 2900, its next 2901 if 2900 is still parked and so on. If calls are parked through the use of this key, CPark is shown with a symbol. Pressing the key again displays the user's parked calls and allow them to be retrieved. Parked calls are retrieved with the Ride function (see page 51).
If not retrieved elsewhere, a parked call will recall to the parking extension after a set time.
See also:
- Park - Park(#) on page 46.
- Park - Call Park to Other Extension (!) on page 46.
- Ride - Ride Call on page 51.

CPkUp - Call Pickup (!)
Answer a call ringing elsewhere on the telephone system.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an admin key.
The CPkUp call answers (pickup) any call currently ringing on the telephone system.
Note: We recommend that this function is only used on systems with a small number of users all in one area. Use of this function on larger system may lead to confusion.
See also:
- PickA - Call Pickup Any on page 47.
- PickG - Call Pickup Group on page 47.
- PickM - Call Pickup Members on page 48.

CWOff - Call Waiting Off
Switches call waiting for the extension off.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The CWOff key switches call waiting for the extension off.
**CWOn - Call Waiting On**
Switches call waiting for the extension on/off.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The CWOn key toggles call waiting on/off. When call waiting is on, CWOn is shown with a symbol. When call waiting is on and the extension is on a call, any additional call receives ringing rather than busy tone.

[User | Digital Telephony | Advanced | Call | Call Waiting On]

**CWSus - Call Waiting Suspend**
Suspend the current call at the exchange and answer the waiting call.
This function is not supported in the USA.
If no slot number is specified when the function is programmed, exchange slot 0 is used. This function cannot be programmed through the phone by the user.
Pressing CWSus is only supported if the exchange provides a Q.931 suspend call facility.

[User | Digital Telephony | Advanced | Call | Call Waiting Suspend]

See also:
- Resum - Resume Call on page 50.

**DCW - Dial CW**
Allows the user to force another extension to have call waiting mode on for the duration of a call attempt. This function is not supported in the USA.
This function requires the target extension number to be entered when programmed. That number is then shown next to DCW. This function cannot be programmed through the phone by the user.
Normally, if the target extension is on a call and doesn't have call waiting on, any new call will receive busy tone or be diverted to voicemail. Pressing DCW will cause the target extension to receive call waiting indication and allow the caller to hear ringing until answered.

[User | Digital Telephony | Advanced | Dial | Dial CW]

See also:
- Queue - Call Queue on page 48.

**Dir - Directory (!)**
Accesses the telephone system directory.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an Admin key.
Pressing Dir displays a number of options.
- INDeX - Search for a matching extension user name on the telephone system.
- Group - Search for a matching group name on the telephone system.
- Extrn - Search for a name match in the telephone systems directory of external numbers.

[User | Digital Telephony | Emulation | Directory]
**Direct - Dial Direct**  
Connects a call to the target extension without any ringing.  
This function requires the target extension number to be entered when programmed.  
That number is then shown next to Direct. The target extension must be capable of auto-answering. This function cannot be programmed through the phone by the user.

```
[User | Digital Telephony | Advanced | Dial | Dial Direct]
```

---

**DNDOon - Do Not Disturb On**  
Puts the extension into 'do not disturb' (no calls) mode.  
This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.  
Pressing Send DNDOon toggles the extension’s do not disturb state. When on, DNDOon is shown with a ✖ symbol and the display includes an N (No calls).

```
[User | Digital Telephony | Advanced | Do Not Disturb | Do Not Disturb On]
```

See also:  
- SAC - Send All Calls (!) on page 51.

---

**DNDOf - Do Not Disturb Off**  
Takes the extension out of 'do not disturb' (no calls) mode.  
This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.  
Pressing Send DNDOf switches the extension's do not disturb state off.

```
[User | Digital Telephony | Advanced | Do Not Disturb | Do Not Disturb Off]
```

---

**DNDX+ - Do Not Disturb Exception Add**  
Adds the specified number to the extension's do not disturb exception list.  
This function requires entry of the calling number when programmed. That number is then shown next to DNDX+. This function cannot be programmed through the phone by the user.  
Pressing Send DNDX+ adds the set number to the extension's do not disturb exception list. That number can then call the extension and transfer calls to the extension even when the extension is in do not disturb mode.

```
[User | Digital Telephony | Advanced | Do Not Disturb | Do Not Disturb Exception Add]
```

---

**DNDX- - Do Not Disturb Exception Delete**  
Removes the specified number from the extension's do not disturb exception list.  
This function requires entry of the calling number when programmed. That number is then shown next to DNDX-. This function cannot be programmed through the phone by the user.  
Pressing Send DNDX- removes the set number from the extension's do not disturb exception list. That number can then call the extension and transfer calls to the extension even when the extension is in do not disturb mode.

```
[User | Digital Telephony | Advanced | Do Not Disturb | Do Not Disturb Exception Del]
```
DPkUp - Directed Call Pickup (!)
Answer a call currently ringing at a specified user or group.
This function can be programmed with or without a a the target extension or group
target number. This function can be programmed through the phone by the user using an Admin key.
If programmed with a target number, the DPkUp key displays that number. When a
call is ringing at that extension or group, press DPkUp to answer (pick up) that call.
If programmed without a target number, pressing DPkUp allows the user to enter
the target number for that pickup attempt.

Drop - Drop (!)
Clears a current calls.
This function does not require any data entered when programmed. This function can
be programmed through the phone by the user using an Admin key.
For a call in progress, pressing Drop disconnects the caller.
When drop is used, silence is returned to the user rather than dial tone. This is
intended operation, reflecting that Drop is mainly used by call center headset users.

DTone - Secondary Dial Tone
Return secondary dial tone to the user.
This function is currently not supported on the 4610 telephone.

Emrgy - Dial Emergency
Dials a specified number regardless of any call barring applied to the user.
This function requires entry of a number to dial when programmed. That number is
then shown next to Emrgy. This function cannot be programmed through the phone by
the user.

Flash - Flash Hook (#)
Send a hook flash signal to the currently connected line.
This function does not require any data entered when programmed. This function
cannot be programmed through the phone by the user. This function can be
programmed through the phone by the user using an Admin 1 key.

FolTo - Follow Me To
Forwards calls from this extension to the specified target.
This function requires the target extension to be entered when programmed. The
target extension number is then shown next to FolTo. This function cannot be programmed
through the phone by the user.
Pressing FolTo sets the extension's Follow Me To number to the specified
target extension and switches follow me on. Whilst on, FolTo is shown with a symbol. Press FolTo again to switch off.
**FwBNo - Forward On Busy Number**
Sets the extensions forwarding number for use with forward on busy and forward on no answer.

This feature requires the target number to be entered when programmed. The number set is shown next to **FwBNo**. This function cannot be programmed through the phone by the user.

Pressing **FwBNo** set the extension's forwarding number to that specified by the key pressed.

See also:
- **FwBOn - Forward On Busy On** on page 39
- **FwNOn - Forward On No Answer On** on page 40.

**FwBOn - Forward On Busy On**
Switches the extension to forward on busy on.

**Note:** When Call Appearance keys have been allocated, all the call appearance lines must be in use before this function becomes active.

This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **FwBOn** toggles the extension's forward on busy state and can also be used in conjunction with **FwBOf - Forward On Busy Off** on page 39. When on, **FwBOn** is shown with a ▲ symbol. When on, calls are forwarded to the extension's forward on busy number.

See also:
- **FwBNo - Forward On Busy Number** on page 39.

**FwBOf - Forward On Busy Off**
Switches the extension to forward on busy off. Used in conjunction with **FwBOn - Forward On Busy On** on page 39

This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **FwBOf** switches the extension's use of forward on busy off.

See also:
- **FwBNo - Forward On Busy Number** on page 39.

**FwdH+ - Forward Hunt Group Calls On**
Switches the extension to forward hunt group calls it receives.

**Note:** Calls are only forwarded when forward unconditional (see **CFrwd - Call Forwarding All (!)** on page 34) or **FwUOn - Forward Unconditional On** on page 41 is also on.

This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **FwdH+** toggles the feature on/off. When on, **FwdH+** is shown with a ▲ symbol. Can also be used in conjunction with **FwdH- - Forward Hunt Group Calls Off** on page 40.
**FwdH - Forward Hunt Group Calls Off**

Switches the extension to forward unconditional off.

This function does not require any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **FwdH** switches the extension's use of forward hunt group calls off. Can also be used in conjunction with **FwdH+ - Forward Hunt Group Calls On** on page 39.

**FwdNo - Forward Number**

Sets the extension's forwarding number for use when forwarding all calls.

This feature requires the target number to be entered when programmed. The number set is shown next to **FwdNo**. This function cannot be programmed through the phone by the user.

Pressing **FwdNo** set the extension's forwarding number to that specified by the key pressed.

Also See:
- **FwBOn - Forward On Busy On** on page 39
- **FwUOn - Forward Unconditional On** on page 41

**FwdOf - Cancel All Forwarding**

Switch off all call forwarding.

This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **FwdOf** switches off all the extensions call forwarding options. It does not delete the forwarding number settings.

**FwNOn - Forward On No Answer On**

Switches the extension to forward on no answer on.

This function does not required any data to be entered when programmed and cannot be programmed through the phone by the user.

Pressing **FwNOn** toggles the extension's forward on no answer state. When on, **FwNOn** is shown with a symbol. When on, calls are forwarded to the extension's forward on busy number (see **FwBNo - Forward On Busy Number** on page 39).

**FwNOf - Forward On No Answer Off**

Switches the extension to forward on no answer off.

This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **FwNOf** switches the extension's use of forward on no answer off. Can also be used in conjunction with **FwNOn - Forward On No Answer On** on page 40.
**FwUOn - Forward Unconditional On**
Switches the extension to forward all its calls except hunt group calls.

**Note:** When Call Appearance keys have been allocated, all the call appearance lines must be in use before this function becomes active.

This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing ➤ FwUOn toggles the extension's forward on busy state. When on, FwUOn is shown with a ◄ symbol and the display includes a D. When on, calls are forwarded to the extension's forward number (see FwBNo - Forward On Busy Number on page 39).

[User | Digital Telephony | Advanced | Forward | Forward Unconditional On]

---

**FwUOf - Forward Unconditional Off**
Switches the extension’s forward unconditional off.

This function does not required any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing ➤ FwUOf switches the extension’s use of forward unconditional off. Can also be used in conjunction with FwUOn - Forward Unconditional On on page 41.

[User | Digital Telephony | Advanced | Forward | Forward Unconditional Off]

---

**GrpPg - Group Paging (!)**
This function can be programmed with or without a target extension or group number. This function can be programmed through the phone by the user using an ➤ Admin key.

If programmed with a target number, the ➤ GrpPg key displays that number. When ➤ GrpPg is pressed, it will make a paging call to that number.

If programmed without a target number, the number must be dialed after the user presses ➤ GrpPg.

[User | Digital Telephony | Emulation | Group Paging]

---

**HdSet - Headset Toggle (!)**
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an ➤ Admin key.

The programmed key will then switch the phone between handset and headset operation. When on, HdSet is shown on a dark background.

There is no linkage between a programmed HdSet key and the phone's HEADSET key.

[User | Digital Telephony | Advanced | Miscellaneous | Headset Toggle]

---

**Here- - Follow Me Here Cancel**
If another extension has follow me set to this extension, switches off the follow me action.

This function requires the original target extension to be entered when programmed. The extension number is then shown next to Here-. This function cannot be programmed through the phone by the user.

Pressing ➤ Here- cancels the use of follow me at the target extension.

[User | Digital Telephony | Advanced | Follow Me | Follow Me Here Cancel]
**Here+ - Follow Me Here**
Forwards calls to the target extension to this extension.
This function requires the original target extension to be entered when programmed. The extension number is then shown next to Here+. This function cannot be programmed through the phone by the user.
Pressing Here+ sets the target extension's Follow Me To number to that this extension. Calls to the target extension are then forwarded to this extension.

[User | Digital Telephony | Advanced | Follow Me | Follow Me Here]

---

**HfAns - Internal Auto-Answer (!)**
Answers internal calls after a single ring.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an Admin key.
The HfAns key toggles internal auto-answer on/off. When on, HfAns is shown with a ✉ symbol.

[User | Digital Telephony | Emulation | Internal Auto Answer]

See also:
- RngOf - Ringer Off (!) on page 51.
- CWOn - Call Waiting On on page 36.

---

**HGEna - Hunt Group Enable**
Sets the extension's membership of a group or groups as enabled. This function does not take the Hunt Group In/Out of Service.
This function can be programmed with or without a target group number. This function cannot be programmed through the phone by the user.
If programmed without a group number, pressing HGEna toggles all the extension's group memberships to either enabled or disabled. A ✉ is shown next to HGEna when the group memberships are enabled.
If programmed with a group number, that number is shown next to HGEna. Pressing HGEna will enable the extension's membership of that group. In this mode the key does not toggle.
When enabled, G is shown on the display and the extension will receive group calls.

[User | Digital Telephony | Advanced | Hunt Group | Hunt Group Enable]

See also:
- HGNS+ - Set Hunt Group Night Service (!) on page 43.
- HGOS+ - Set Hunt Group Out of Service on page 43.
- HGDis - Hunt Group Disable on page 42.

---

**HGDis - Hunt Group Disable**
Sets the extension's group membership as disabled. This function does not take the Hunt Group Out of Service.
This function can be programmed with or without a target group number. This function cannot be programmed through the phone by the user.
If programmed without a group number, pressing HGDis disables all the extension's group memberships.
If programmed with a group number, pressing HGDis disables just the extension's membership of that group.

[User | Digital Telephony | Advanced | Hunt Group | Hunt Group Disable]
HGNS+ - Set Hunt Group Night Service (!)
Put a specific hunt group into night service mode.
This function requires the hunt group number to be entered when programmed. The hunt group number is then shown next to HGNS+. This function can be programmed through the phone by the user using an Admin key.
Pressing HGNS+ puts the hunt group into night service. Group calls then go to its night service fallback group if set or, if not answered, to voicemail.

HGNS- - Clear Hunt Group Night Service
Returns a hunt group that has been manually put into night service back to normal service. Used with HGNS+ - Set Hunt Group Night Service (!) on page 43.
This function requires that the hunt group number is entered when programmed. This function cannot be programmed through the phone by the user.
The hunt group number is shown next HGNS-. Pressing HGNS- puts the group back into normal service if in night service.

HGOS+ - Set Hunt Group Out of Service
Put a specific hunt group out of service mode.
This function requires the hunt group number to be entered when programmed. The hunt group number is then shown next to HGOS+. This function cannot be programmed through the phone by the user.
Pressing HGOS+ puts the hunt group out of service. Group calls then go to its out of service fallback group if set or, if not answered, to voicemail.

HGOS- - Clear Hunt Group Out of Service
Returns a hunt group that has been manually put into out of service back to normal service. Used with HGNS+ - Set Hunt Group Night Service (!) on page 43.
This function requires that the hunt group number is entered when programmed. This function cannot be programmed through the phone by the user.
The hunt group number is shown next HGOS-. Pressing HGOS- puts the group back into normal service if in night service.

Hold - Hold Call
Place the current call on hold at the central office. This function is not supported in the USA.
If no exchange slot number is specified when the function is programmed, central office slot 0 is used.
Pressing Hold is only supported if the central office provides a Q.931 hold facility. It is not the same as local hold provided by the IP Office.

See also:
- Rtriv - Retrieve Call on page 51.
HoldCW - Hold Call Waiting
Place the current call on hold and connects any call waiting. This function is not supported in the USA.
This function does not require any data to be entered when programmed. This function cannot be programmed through the phone by the user.
Pressing HoldCW places the current call on hold and connects any call waiting without any ringing.

IAuto - Automatic Intercom
Connects call to the extension without ringing.
This function requires entry of an extension number when programmed. The target extension must be support handsfree operation. This function cannot be programmed through the phone by the user.
Press IAuto connects the call without any ringing at the remote extension. If the target extension is busy or not available, the call will follow any forwarding or diversion to voicemail set.

ICSeq - Set Inside Call Sequence
Sets the ringing pattern (sequence) used for internal calls.
This function is currently not supported on the 4610 telephone.

IDial - Dial Intercom
The same as IAuto - Automatic Intercom on page 44. This function cannot be programmed through the phone by the user.

Inclu - Dial Inclusion
Intrudes on a call in progress at the target extension.
This function is currently not supported on the 4610 telephone.

Intru - Call Intrude
Intrudes on a call in progress at the target extension, creating a conference between the callers and the intruding extension.
This function requires entry of the target extension number when programmed. The Intru key shows the target extension number. This function cannot be programmed through the phone by the user.
Pressing Intru intrudes on the call in progress.
Note: That the System Administrator must configure the intruding extension as being able to intrude. Additionally none of the other extensions involved in the call can have "Cannot be intruded on" status.
**Listn - Call Listen**
Allow the extension to listen to groups calls to the target extension. The call parties cannot hear the listening extension.

This function requires entry of the target extension number when programmed. This function cannot be programmed through the phone by the user.
The **Listn** key shows the target extension number.

Use of this function requires setup of the extension’s monitor group by the System Administrator. This function requires the telephone system to have some free conference capacity when invoked.

See also:
- Intru - Call Intrude on page 44.
- Recor - Call Record on page 52.
- Steal - Call Steal on page 52.

---

**Login - Extn Login**
Logs the current user onto the extension.

This function does not require any data to be entered when programmed. The user cannot program this function through the phone. Pressing the soft key login prompts the user **Enter Extn**: The user enters the desired extension and presses the soft function key **Next**. The user is prompted for the password. The user enters the password and presses the soft function key “Done.”

---

**Logoff - Extn Logout**
Logs the current user off the extension.

This function does not require any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **Logoff** logs the current user off the extension. A new user must then log on to use the extension or dial *36 to re-associate the extension with its default user.

---

**Music - Hold Music**
Plays the telephone system’s music on hold.

This function does not require any data to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **Music** plays the telephone system’s music on hold through the extension.

---

**NATim - Set No Answer Time**
Sets the extension’s no answer time after which ringing calls are forwarded or go to voicemail.

This function requires the time in seconds to be entered when programmed. The value is shown next to **NATim**. This function cannot be programmed through the phone by the user.

Pressing **NATim** sets the extension’s no answer time to the indicated number of seconds. This time is used to set a delay between ending one call and the next call ringing the extension (the waiting call may be indicated on the display however).

See also:
- VMOff - Voicemail Off on page 54.
**OCSeq - Set Outside Call Sequence**
Sets the ringing pattern (sequence) used for internal calls.
This function is currently not supported on the 2420 telephone.

**Page - Page**
Page the specified target extension or group. The target must be capable of hands-free speech.
This function requires the target extension or group number to be specified when programmed. The target is then shown next to the Page key. This function cannot be programmed through the phone by the user.

See also:
- GrpPg - Group Paging (!) on page 41.

**Park - Park (#)**
Park calls to and retrieve calls from a specific park slot.
This function requires entry of a park slot number when programmed. That number and Park then appears next to the key. This function can be programmed through the phone by the user using an Admin 1 key.

The user can use the key to park calls into that park slot and unpark calls from that slot. Parked calls can also be retrieved with the Ride function (see page 51).

When a call is parked in that park slot by the user, a symbol appears next to the key and parked by another user, then Park is underlined.

See also:
- CPark - Call Park (!) on page 35.
- Park - Call Park to Other Extension (!) on page 46.
- Ride - Ride Call on page 51.

**Park - Call Park to Other Extension (!)**
Allows a call to be parked against another extension. Depending on the other extension's type, its parked call indication is triggered. Parked calls are retrieved with the Ride function (see page 51).

This function can be programmed with or without a target extension number. This function can be programmed through the phone by the user using an Admin key.

If programmed with a number, the Park key displays that number. After answering a call, pressing Park parks the call against that extension.

If programmed without a number, after pressing Park the target for the parked call must be entered.

The parked call is assigned a number based on the parking extensions number. For example, extension 290's first parked call is numbered 2900, it's next 2901 if 2900 is still parked and so on. If not retrieved elsewhere, a parked call will recall to the parking extension after a set time.

See also:
- CPark - Call Park (!) on page 35.
- Park - Call Park to Other Extension (!) on page 46.
- Ride - Ride Call on page 51.
**PCall - Priority Call**

Call a specified target extension even if that extension is set to 'Do not Disturb'.

This function can be programmed with or without an extension number being specified. If programmed with an extension number then the target extension is shown next to **PCall**. If programmed without an extension number then the user has to enter the extension number when **PCall** is pressed.

This function cannot be programmed through the phone by the user.

[User | Digital Telephony | Advanced | Call | Priority Call]

---

**PhyEx - Dial Physical Extension by Number**

Dial a specified extension regardless of the current logged on user at that extension and any forwarding, follow me and do not disturb settings applied by the extension user.

This function requires the target extension number to be specified when programmed. The target extension is then shown next to **PhyEx**. This function cannot be programmed through the phone by the user.

This function is currently only available on US based systems.

[User | Digital Telephony | Dial | Dial Physical Extension by Number]

---

**PickA - Call Pickup Any**

Pickup any ringing call.

This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **PickA** answers any call currently ringing on the telephone system.

Note: We recommend that this function is only used on systems with a small number of users all in one area. Use of this function on larger system may lead to confusion.

[User | Digital Telephony | Advanced | Call | Call Pick Up Any]

See also:
- CPkUp - Call Pickup (!) on page 35.
- DPkUp - Directed Call Pickup (!) on page 38.

---

**PickG - Call Pickup Group**

Pickup any ringing call to a group of which the extension is a member.

This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.

Pressing **PickG** answers any call currently ringing a group of which the extension is a member.

[User | Digital Telephony | Advanced | Call | Call Pick Up Group]

See also:
- CPkUp - Call Pickup (!) on page 35.
- DPkUp - Directed Call Pickup (!) on page 38.
**PickM - Call Pickup Members**
Pickup any call ringing an extension that is a member of the specified group. This function requires entry of the target group number when programmed or the group name in quotation marks. This function cannot be programmed through the phone by the user.
Pressing ➪ PickM answers any call currently ringing a member of the specified group. The call does not have to be a call to the group number.

[User | Digital Telephony | Advanced | Call | Call Pickup Members]

See also:
- CPkUp - Call Pickup (!) on page 35.
- DPkUp - Directed Call Pickup (!) on page 38.

**Prog - Abbreviated Dial Program (!)**
Select and program numbers against display keys. This function can be programmed through the phone by the user using an Admin key.

[User | Digital Telephony | Emulation | Abbreviated Dial Program]

See also:
- Dial (#) on page 31.
- AD - Abbreviated Dial (!) on page 32.

**Quota - Clear Quota**
Clears (resets) the time quota for connections to a specified external data service (eg. the internet). This function requires entry of the service name when programmed. If left blank then the quotas for all services are cleared (reset). This function cannot be programmed through the phone by the user.

[User | Digital Telephony | Advanced | Call | Clear Quota]

**Queue - Call Queue**
Places a current call into the call queue of a specified extension. Allows calls to be transferred to extensions that return busy tone. This feature is not applicable when working with multiple Call Appearance lines. This function requires entry of a target extension number when programmed. This function cannot be programmed through the phone by the user.
During a call, pressing ➪ Queue places that call in the target extensions call queue. If the target extension is free, it rings immediately. If the target extension is busy, it rings when it becomes free again.

[User | Digital Telephony | Advanced | Call | Call Queue]

See also:
- DCW - Dial CW on page 36.
**RBak+ - Ringback When Free**

Sets a callback when free on busy extensions and callback when next used on unanswered extensions.

This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.

When an extension called does not answer or is busy, pressing \(\text{AutCB}\) sets a callback on that extension. Whilst the callback is set, \(\text{AutCB}\) is shown with a \(\downarrow\) symbol. Pressing \(\text{AutCB}\) again cancels the callback.

When the extension becomes free or is next used, **Ring Back to** and the number appears on the phone that set the callback. Pressing \(\downarrow\) answers the ringback and starts a call to the callback target.

See also:
- AutCB - Automatic Callback (!) on page 33.

**RBak - Cancel Ringback When Free**

 Cancels any set ringback when free function.

This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.

Pressing \(\text{RBak}\) switches off any set ring back when free. If the ringback was set using a \(\text{AutCB}\) key, that key will still appear with a \(\downarrow\) symbol that can be cancelled by pressing the \(\text{AutCB}\) key again.

**RBSeq - Set Ringback Sequence**

Sets the ringing pattern (sequence) used for voicemail and ringback calls.

This function is currently not supported on the 4610 telephone.

**Recor - Call Record**

Records the current call at the specified target extension.

This function requires entry of a target extension number when programmed. This function cannot be programmed through the phone by the user.

When \(\text{Recor}\) is pressed, the target extensions current call is recorded into their voicemail mailbox.

**Note:** This function requires Voicemail Pro to be installed. If advice of call recording is enabled, the call parties will hear a warning before the recording takes place. In some locations it may be a legal requirement to advise callers that a call is being recorded.

See also:
- Listn - Call Listen on page 45.
- Steal - Call Steal on page 52.
**Relay - Relay Pulse**

Pulse the specified external output relay (1 or 2) on for 5 seconds. This function requires the relay switch (1 or 2) on the telephone system to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing Relay switches the specified relay on for 5 seconds and then off.

[User | Digital Telephony | Advanced | Relay | Relay Pulse]

---

**Rely+ - Relay On**

Switch the specified external output relay (1 or 2) on. This function requires the relay switch (1 or 2) on the telephone system to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing Relay switches the specified relay on.

[User | Digital Telephony | Advanced | Relay | Relay On]

---

**Rely- - Relay Off**

Switch the specified external output relay (1 or 2) off. This function requires the relay switch (1 or 2) on the telephone system to be entered when programmed. This function cannot be programmed through the phone by the user.

Pressing Relay switches the specified relay off.

[User | Digital Telephony | Advanced | Relay | Relay Off]

---

**Resum - Resume Call**

Resume a call previously suspended into a specified ISDN exchange slot. This function is not supported in the USA. This function requires the exchange slot number to be specified when programmed. The slot number is then shown next to Resum. This function cannot be programmed through the phone by the user.

Pressing Resum resumes any call previous suspended into the specified exchange slot. Suspended calls can be resumed by any extension.

[User | Digital Telephony | Advanced | Call | Resume Call]

See also:
- SusCW - Suspend CW on page 52.
- Suspe - Suspend Call on page 52.
**Rtriv - Retrieve Call**
Retrieve a call previously held into a specified ISDN central office slot and is only supported if the central office provides a Q.931 hold facility. This function is not supported in the USA.
This function requires the central office slot number to be specified when programmed. The slot number is then shown next to Rtriv. This function cannot be programmed through the phone by the user.
Pressing Rtriv retrieves any call previously held into the specified central office slot.
Held calls can only be retrieved by the extension that put the call on central office hold.

[User | Digital Telephony | Advanced | Call | Retrieve Call]

See also:
- Hold - Hold Call on page 43.

**Ride - Ride Call**
Unpark a parked call from a specified system park slot.
This function requires the park slot number to be specified when programmed. The slot number is then shown next to Ride. This function cannot be programmed through the phone by the user.
Pressing Ride unparks any call previously parked into the specified system park slot by the same or another extension.

[User | Digital Telephony | Advanced | Call | Ride Call]

See also:
- CPark - Call Park (!) on page 35
- Park - Park (#) on page 46.
- Park - Call Park to Other Extension (!) on page 46.

**RngOf - Ringer Off (!)**
Switches the phones audible ringer on/off.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an Admin key.
The programmed RngOf key toggles the phones call ringer on/off. When off, RngOf is shown with a symbol.

[User | Digital Telephony | Emulation | Ringer Off]

See also:
- CWOn - Call Waiting On on page 36
- HfAns - Internal Auto-Answer (!) on page 42.

**SAC - Send All Calls (!)**
Switch do not disturb on/off.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an Admin key.
The SAC key switches "do not disturb" on/off. When on, SAC is shown with a symbol and the display includes an N (No calls).
When SAC is on, callers receive busy tone or are diverted to voicemail. For each user the System Administrator can set which numbers can still call when SAC is on. If the extension user has Phone Manager, they can set those numbers themselves. With a call already connected and another call already alerting, activating SAC will not affect the already alerting call.

[User | Digital Telephony | Emulation | Send All Calls]

See also:
- DNDOn - Do Not Disturb On on page 37.
**Spres - AD Suppress (!)**
Replace the display of dialed digits with \(s\) characters.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an \(\text{Admin}\) key.
The programmed \(\text{Spres}\) key toggles the display of dialed digits on/off. When on, \(\text{Spres}\) is shown with a \(\text{\textbullet}\) symbol and each dialed digit is replaced by \(s\) on the display.

**Steal - Call Steal**
Take over a call from a specified extension or retrieve a call just transferred or forwarded. This function cannot be programmed through the phone by the user.
If a target extension number is entered when this function is programmed, \(\text{Steal}\) displays that number. Pressing \(\text{Steal}\) when the target extension has a call will take over the call.
If no target extension number is entered when the function is programmed, \(\text{Steal}\) retrieves the last calls transferred from the extension. This includes calls diverted to voicemail.
**Notes:**
1. Target extension must not have \text{Cannot Intrude} set.
2. Extension with \text{Steal} allocated must also have \text{Can Intrude} set.

**SusCW - Suspend CW**
Suspend the current call at the exchange and answer the waiting call.
If no exchange slot number is specified when the function is programmed, exchange slot 0 is used. This function cannot be programmed through the phone by the user.
Pressing \(\text{SusCW}\) is only supported if the exchange provides a Q.931 suspend call facility.

**Suspe - Suspend Call**
Suspend the current call at the exchange.
If no exchange slot number is specified when the function is programmed, exchange slot 0 is used. This function cannot be programmed through the phone by the user.
Pressing \(\text{Suspe}\) is only supported if the exchange provides a Q.931 suspend call facility.

**Timer - Timer (!)**
Starts a timer on the phone's display.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an \(\text{Admin}\) key.
The timer is reset for each new call made or answered. When timer mode is selected, a \(\text{\textbullet}\) is shown next to \text{Timer}.
**TmDay - Time of Day (!)**
Replaces the user name and number details on the phone display with the date and time.
This function does not require any data entered when programmed. This function can be programmed through the phone by the user using an Admin key.
When time and date mode is selected, a ⌚ is shown next to TmDay.

[User | Digital Telephony | Emulation | Time of Day]

**Toggl - Toggle Calls**
Cycle through each of the extension user's current held calls.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
Pressing Toggl puts the user's current call on hold and connects a previously held call.

[User | Digital Telephony | Advanced | Call | Toggle Calls]

**VMRB- - Voicemail Ringback Off**
Switches voicemail ringback for the extension off.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The VMRB- key switches voicemail ringback for the extension off.

[User | Digital Telephony | Advanced | Voicemail | Voicemail Ringback Off]

**VMRB+ - Voicemail Ringback On**
Switches voicemail ringback on/off.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The VMRB+ key toggles voicemail ringback for the extension on/off. When on, VMRB+ is shown with a ⌚ symbol and the extension is called when new messages are left in its mailbox.

[User | Digital Telephony | Advanced | Voicemail | Voicemail Ringback On]

**VMCol - Voicemail Collect**
Accesses a specified voicemail mailbox to collect or leave messages.
This function requires entry of the target mailbox name prefixed by either ? to collect messages or # to leave a message. If just ? or # is entered then the calling extension's mailbox is assumed. This function cannot be programmed through the phone by the user.
The VMCol key appears followed by the mailbox name.

[User | Digital Telephony | Advanced | Voicemail | Voicemail Collect]
**VMOff - Voicemail Off**
Disables access to the user’s voicemail box.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The [VMOff] key switches voicemail operation for the extension off.

[User | Digital Telephony | Advanced | Voicemail | Voicemail Off]

---

**VMOn - Voicemail On**
Enables/disables access to the user’s voicemail box.
This function does not require any data entered when programmed. This function cannot be programmed through the phone by the user.
The [VMOn] key toggles voicemail operation for the extension on/off. When voicemail is on, **VMOn** is shown with a ↓ symbol.

[User | Digital Telephony | Advanced | Voicemail | Voicemail On]

---

**WUTim - Set Wrap Up Time**
Sets the extension’s busy wrap up time to be inserted between calls.
This function requires the time in seconds to be entered when programmed. The value is shown next to **WUTim**. This function cannot be programmed through the phone by the user.
Pressing [WUTim] sets the extension's busy wrap up time to the indicated number of seconds. This time is used to set a delay between ending one call and the next call ringing the extension (the waiting call may be indicated on the display however).

[User | Digital Telephony | Advanced | Set | Set Wrap Up Time]

See also:
- NATim - Set No Answer Time on page 45.
System Features

Introduction
As well as your phones specific features, you can access a number of system features by dialing short codes.

These instructions are for the system's default configuration. They assume that you are using the default feature codes. It also assumes that you have full access to all features and the public telephone network.

Making Calls

Internal Calls:
If your System Administrator has allocated you the Ring Back When Free feature (see page 49) under a dial pad digit, you can:

1. When you call an extension that does not answer or is busy, press the RBak feature key to set a callback on that extension.
2. When the extension you called becomes free, your phone will ring (a burst of three rings).
3. Lift the handset and the extension is called automatically.

External calls:
To make an external call, either dial the number (prefixed by the access code if required) or use a speed dial code (contact your system manager for a list of your speed codes).

If you hear busy tone while dialing, then the call may be barred. Your system manager can bar certain calls, such as those to premium rate numbers and international calls.

Answering Calls

Ringing at your own extension:
Simply pick up the handset. When in headset mode, press the button associated with the alerting call.

The default ringing cadences are:
- Internal calls have a single ring cadence
- External calls have a double ring cadence.

These can be changed by your System Administrator.

Ringing at another extension:
You can answer from your own phone by using Call Pick-Up; lift your handset and dial:
- *30 to answer a call ringing anywhere.
- *31 to answer a call within your group.
- *32*201# to answer the call for a particular extension, in this example 201.

Note: If your phone rings for any longer than a specified period (15 seconds in default), any re-direction feature that you have activated, such as voicemail or call forwarding, will come into effect.
Call Forwarding

Your calls can be forwarded to another extension or an external number either when you are away from your desk (on no answer), when your extension is busy, and all calls (for example when you go on holiday).

- To switch forward direct station (i.e. not Hunt Group*) calls on dial *01, to switch it off dial *02.
- To switch forward on busy on dial *03, to switch it off dial *04.
- To switch forward on no answer on dial *05, to switch it off dial *06.
- To set the number to which your calls are forwarded dial *07*201#, forwarding to 201 in this example.

* To forward Hunt Group Calls On/Off, use *50 and *51 respectively.

Diverting Calls

You can divert your calls to another extension.

Note: If you do not answer calls at the temporary extension, they are forwarded to your own voicemail or call forwarding number.

At another extension:

- *12*N# from the extension you are temporarily using (where N is your extension number). Hence, calls to your extension will be diverted to the extension you are temporarily using.
- *13*N# to re-direct the calls back to your own extension, before you return to it.

At your own extension:

- *14*N# from your own extension (where N is the extension to which you want your calls diverted).
- *14*# to cancel either feature from your own extension.

Do Not Disturb

You may choose to receive no calls at all or only those from particular callers on your exceptions list:

- To switch Do Not Disturb on (with or without exceptions) dial *08, to switch it off dial *09.
- *10*N# to add a number to the exception list.
- *11*N# to delete a number from the exception list.

Note: Your callers, other than your exceptions, either hear busy tone or are re-directed to your voicemail.
Voicemail

Where your system has voicemail support and has been installed:

- To switch voicemail on dial *18, to switch it off dial *19.
- To retrieve your voicemail, use the code *17.

Your voicemail may be set up to deliver your messages by calling you whenever you hang up: this feature is known as Voicemail Ringback.

- To turn Voicemail Ringback on dial *48; to turn it off dial *49.

Dialing a number while listening to your messages invokes further facilities:

Once messages have been delivered, they are held on the system for 24 hours (this is fixed for Voicemail Lite, but can be varied by your System Administrator if your IP Office is equipped with VoicemailPro).

You can collect your voicemail from another extension by using the PIN your System Administrator has set up for you. You can collect your messages if you are out of the office, by either dialing from a number that has been registered for the purpose or by dialing your extension number and PIN when prompted. If validation is successful, then dial 1 to retrieve your mail.

The System Administrator also specifies the reception number, to which the call is diverted if the caller dials 0, and your email address if your voicemail and email are integrated.

Default Feature Codes

The following are the normal default feature codes available to all users. Your System Administrator may add additional codes for other features and for speed dials.

The N where shown, should be replaced by the appropriate number. For example, with *07*N#, replace N with the extension to which you want your calls forwarded when you have forwarding switched on.

Management and Troubleshooting

Overview
The 4610 IP Telephones are relatively trouble-free. This chapter provides helpful information for:

- Testing your telephone to be sure it is operating correctly.
- Basic Troubleshooting; this chart provides the most common problems an end user might encounter and suggested resolutions.
- Application-specific troubleshooting; this chart describes problems and solutions specific to a 4610 application (Phone, Speed Dial, Call Log, or Web Access).
- Resetting or power-cycling your phone, when Basic Troubleshooting does not resolve a problem.

Testing your phone
This test function enables you to verify that your telephone’s lights and display are operating properly.

Testing the Telephone’s Lights and Display
1. With the telephone idle (on-hook), press and release the \( \text{Mute} \) button, then press the following numbers on the dial pad: 8 3 7 8 # (which stands for TEST).
   - The display should indicate the self-test has started. If the test is successful, the message “Self test Passed #=end” displays; if the test is not successful, the message “Self test Failed #=end” displays instead.
2. Press # to return to the Phone screen.
   - If nothing appears on the display and the phone is receiving power, your phone may need to be replaced. Contact your System Administrator for assistance or additional troubleshooting information.

Troubleshooting Chart

Resetting the IP Telephone

Reset your IP Telephone when other troubleshooting suggestions do not correct the problem or after being advised to do so by your System Administrator.

Resetting Your Phone
This basic reset procedure should resolve most problems.

1. Press the Mute button.
2. Using the dial pad, press the following keys in sequence: 73738#
   - The display shows the message “Reset values? * = no # = yes.”
3. Choose one of the following:
   - If you want to reset the phone without resetting any assigned values, press * (asterisk).
     - A confirmation tone sounds and the display prompts “Restart phone?
       * = no
       # = yes.”
   - If you want to reset the phone and any previously assigned (programmed) values, press # (the pound key). (Use this option only if your phone has programmed, static values)
     - The display shows the message “Resetting values” while your IP Telephone resets its programmed values, such as the IP address, to its default values, and re-establishes the connection to the server. The display then prompts “Restart phone?
       * = no
       # = yes.”

   Note: Any reset/restart of your phone may take a few minutes.

Power Cycling Your Phone
Use the power cycle with your System Administrator’s approval only if the basic or programmed reset procedure cannot be performed or does not correct the problem:

1. Unplug the phone and plug it back in.
   - The phone connection is re-established.
2. If power-cycling does not correct the problem, your System Administrator can perform a more severe power cycle routine by unplugging both the phone and the Ethernet cables.

   WARNING: Because the type of power cycle mentioned in Step 2 involves re-programming certain values, it should only be performed by your System Administrator.
