

## Updated fileutils/coreutils package fix ls vulnerabilities - (RHSA-2003-309)

**Advisory Original Release Date:** October 4, 2005

**Last Revised:** October 27, 2005

**Number:** ASA-2005-213

**Risk Level:** Medium

**Advisory Version:** 2.0

**Advisory Status:** Interim

### Overview:

The fileutils package contains several basic system utilities. One of these utilities is the "ls" program, which is used to list information about files and directories.

Multiple vulnerabilities have been discovered in the fileutils `ls` command. Georgi Guninski discovered a memory starvation denial of service vulnerability in the `ls` program. A separate issue has been discovered in a non-exploitable integer overflow that could cause a system crash. A remote attacker could exploit either of these vulnerabilities to create a denial-of-service (DoS) on an affected system. The common vulnerabilities and exposures project ([cve.mitre.org](http://cve.mitre.org)) has assigned the names [CAN-2003-0853](#) and [CAN-2003-0854](#) to these issues.

More information about these vulnerabilities can be found in the security advisories issued by Red Hat

- <https://rhn.redhat.com/errata/RHSA-2003-309.html>

### System Products utilizing fileutils:

Product	Affected S/W Version	Actions	Risk Level
Avaya™ S8710/S8700/S8500/S8300	Prior to CM 3.0.1 SP 10706	Fixes for this issue are included in CM 3.0.1 with SP 10706 and later.  Avaya recommends that systems running Communication Manager release 3.0 and earlier take advantage of these security fixes by upgrading to CM 3.0.1 with SP 10706 and later. (see below for more information)	Medium
Avaya™ Converged Communication Server (CCS)	CCS - All versions	Follow recommended actions below. A patch is being considered for a future	Medium

	update.	
--	---------	--

**Recommended Actions for S8710/S8700/S8500/S8300 servers:**

Avaya recommends that systems running Communication Manager release 3.0 and earlier take advantage of these security fixes by upgrading to CM 3.0.1 with SP 10706 and later. The Avaya Communication Manager Service pack instructions, release notes, and downloads are available from:

[Avaya Communication Manager Service Packs for 3.0](#)

**Recommended Actions:**

For all system products which use vulnerable versions of fileutils, Avaya recommends that customers restrict local and network access to the server. This restriction should be enforced through the use of physical security, firewalls, ACLs, VPNs, and other generally-accepted networking practices until such time as an update becomes available and can be installed.

**Avaya Software-Only Products**

Avaya software-only products operate on general-purpose operating systems. Occasionally vulnerabilities may be discovered in the underlying operating system or applications that come with the operating system. These vulnerabilities often do not impact the software-only product directly but may threaten the integrity of the underlying platform.

In the case of this advisory Avaya software-only products are not affected by the vulnerability directly but the underlying Linux platform may be. Customers should determine on which Linux operating system the product was installed and then follow that vendor's guidance:

**Software-Only Products**

Product	Affected S/W Version	Actions
Avaya™ CVLAN	All versions	Depending on the Operating System provided by customers, the affected package may be utilized on the underlying Operating System supporting the CVLAN application. Avaya recommends that customers follow recommended actions supplied by the Operating System vendor (e.g. Red Hat).
Avaya™ Integrated Management	All versions	Depending on the Operating System provided by customers, the affected package may be utilized on the underlying Operating System supporting the Integrated Management application. Avaya recommends that customers follow recommended actions supplied by the

	Operating System vendor (e.g. Red Hat).
